Juniper Security, Professional (JNCIP-SEC) Sample Questions (Q32-Q37):

NEW QUESTION # 32

You are using ADVPN to deploy a hub-and-spoke VPN to connect your enterprise sites. Which two statements are true in this scenario? (Choose two.)

- A. Certificate-based authentication is required.
- B. ADVPN creates a full-mesh topology.
- C. OSPF routing is required.
- D. IBGP routing is required.

Answer: A,C

Explanation:

Explanation:

NEW QUESTION # 33

What is the advantage of using separate st0 logical units for each spoke connection?

- A. Junos devices can exchange NHTB data automatically using this method.
- B. It enables assignments of different settings to each logical unit.
- C. It facilitates scalability.
- D. It is easy to configure even when managing many st0 units.

Answer: B

NEW QUESTION # 34

While troubleshooting security policies, you added the count action.

Where do you see the result of this action?

- A. In the show security policies hit-count command output.
- B. In the show firewall log command output.
- C. In the show security flow statistics command output.
- D. In the show security policies detail command output.

Answer: D

NEW QUESTION # 35

You have configured the backup signal route IP for your multinode HA deployment, and the ICL link fails.

Which two statements are correct in this scenario? (Choose two.)

- A. The current active node retains the active role.
- B. The backup node changes the routing preference to the other node at its medium priority.
- C. The active node keeps the active signal route.
- D. The active node removes the active signal route.

Answer: A,B

NEW QUESTION # 36

Which two security intelligence feed types are supported?

- A. Command and Control feed
- B. custom feeds
- C. malicious URL feed
- D. infected host feed

Answer: B,D

Explanation:

The two security intelligence feed types that are supported are:

A) Infected host feed. An infected host feed is a security intelligence feed that contains the IP addresses of hosts that are infected by malware or compromised by attackers. The SRX Series device can download the infected host feed from the Juniper ATP Cloud or generate its own infected host feed based on the detection events from IDP. The SRX Series device can use the infected host feed to block or quarantine the traffic to or from the infected hosts based on the security policies1.

B) Command and Control feed. A command and control feed is a security intelligence feed that contains the IP addresses of servers that are used by malware or attackers to communicate with infected hosts.

The SRX Series device can download the command and control feed from the Juniper ATP Cloud or generate its own command and control feed based on the detection events from IDP. The SRX Series device can use the command and control feed to block or log the traffic to or from the command and control servers based on the security policies2.

The other options are incorrect because:

C) Custom feeds. Custom feeds are not a security intelligence feed type, but a feature that allows you to create your own security intelligence feeds based on your own criteria and sources. You can configure custom feeds by using the Junos Space Security Director or the CLI. Custom feeds are not supported by the Juniper ATP Cloud or the IDP3.

D) Malicious URL feed. Malicious URL feed is not a security intelligence feed type, but a feature that allows you to block or log the traffic to or from malicious URLs based on the security policies. The SRX Series device can download the malicious URL feed from the Juniper ATP Cloud or the Juniper Threat Labs. Malicious URL feed is not supported by the IDP4.
