

JN0-664 Guaranteed Questions Answers | JN0-664 New Guide Files

P.S. Free 2025 Juniper JN0-664 dumps are available on Google Drive shared by Braindumpsqa: https://drive.google.com/open?id=1nbGDSrzq-GsVeX9SX_I-8V3hsnkxv_Qxv

Are you trying to pass the JN0-664 exam to get the longed JN0-664 certification? As we know, there are a lot of the advantages of the certification, such as higher salaries, better job positions and so on. Perhaps at this moment, you need the help of our JN0-664 Study Materials. As our company's flagship product, it has successfully helped countless candidates around the world to obtain the coveted JN0-664 certification.

Juniper JN0-664 (Service Provider, Professional (JNCIP-SP)) Certification Exam is a professional-level certification exam that is designed for network engineers, administrators, and technicians who work in service provider environments. Service Provider, Professional (JNCIP-SP) certification exam is intended to test the knowledge, skills, and abilities of candidates who want to demonstrate their expertise in Juniper Networks service provider routing and switching technologies.

100% Pass Juniper - JN0-664 –High Hit-Rate Guaranteed Questions Answers

In order to help customers solve problems, our company always insist on putting them first and providing valued service. We deeply believe that our JN0-664 question torrent will help you pass the exam and get your certification successfully in a short time. Maybe you cannot wait to understand our JN0-664 Guide questions; we can promise that our products have a higher quality when compared with other study materials. At the moment you can free download the demo of our JN0-664 guide torrents, and I can make a bet that you will be fond of our JN0-664 exam questions if you understand it.

Juniper JN0-664 Exam is designed to test the knowledge and skills of service provider professionals who work with Juniper Networks' technologies. Service Provider, Professional (JNCIP-SP) certification validates the understanding of service provider routing and switching technologies and their related platform configuration and troubleshooting skills.

Juniper Service Provider, Professional (JNCIP-SP) Sample Questions (Q42-Q47):

NEW QUESTION # 42
Exhibit

You are attempting to summarize routes from the 203.0.113.128/25 IP block on R8 to AS 64500. You implement the export policy shown in the exhibit and all routes from the routing table stop being advertised.

In this scenario, which two steps would you take to summarize the route in BGP? (Choose two.)

- A. Remove the from protocol bgp command from the export policy.
- **B. Add the set routing-options static route 203.0.113.123/25 discard command.**
- C. Add the set protocols bgp family inet unicast add-path command to allow additional routes to the RIB tables. -
- **D. Replace exact in the export policy with orlonger.**

Answer: B,D

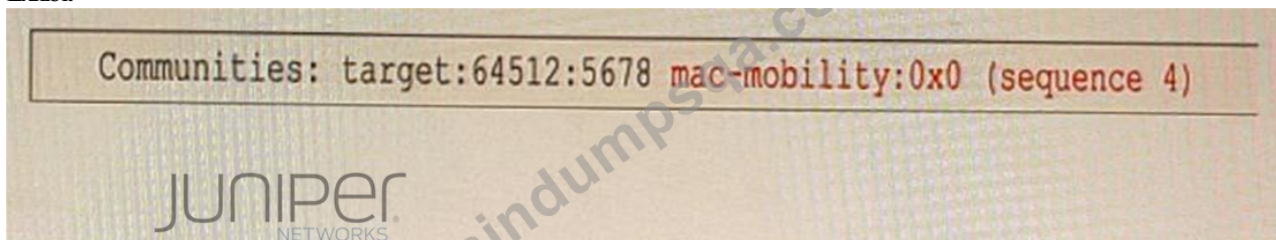

Explanation:

To summarize routes from the 203.0.113.128/25 IP block on R8 to AS 64500, you need to do the following:

- * Add the set routing-options static route 203.0.113.128/25 discard command. This creates a static route for the summary prefix and discards any traffic destined to it. This is necessary because BGP can only advertise routes that are present in the routing table.
- * Replace exact in the export policy with orlonger. This allows R8 to match and advertise any route that is equal or more specific than the summary prefix. The exact term only matches routes that are exactly equal to the summary prefix, which is not present in the routing table.

NEW QUESTION # 43

Exhibit

You have MAC addresses moving in your EVPN environment

Referring to the exhibit, which two statements are correct about the sequence number? (Choose two)

- A. It identifies MAC addresses that should be discarded.
- **B. It resolves conflicting MAC address ownership claims.**
- C. It is advertised using a Type 2 message
- **D. It helps the local PE to identify the latest advertisement.**

Answer: B,D

Explanation:

Explanation

The sequence number is a field in the MAC mobility extended community that is used to resolve conflicting MAC address ownership claims and to help the local PE to identify the latest advertisement. The sequence number is incremented by one for every MAC address mobility event, such as when a host moves from one Ethernet segment to another segment in the EVPN network. The PE device that receives multiple MAC advertisements for the same MAC address chooses the one with the highest sequence number as the most recent and valid advertisement.

NEW QUESTION # 44

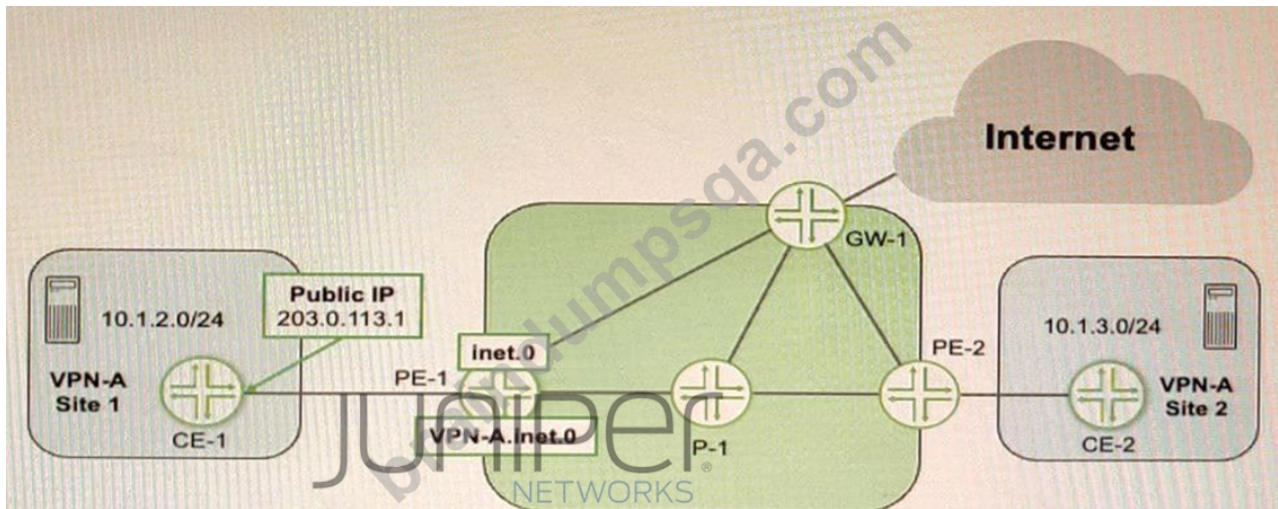

An interface is configured with a behavior aggregate classifier and a multifield classifier. How will the packet be processed when received on this interface?

- A. The packet will be processed by the BA classifier first, then the MF classifier.
- B. The packet will be forwarded with no classification changes.
- C. The packet will be processed by the MF classifier first, then the BA classifier.
- D. The packet will be discarded.

Answer: A

NEW QUESTION # 45

Exhibit

Referring to the exhibit, CE-1 is providing NAT services for the hosts at Site 1 and you must provide Internet access for those hosts. Which two statements are correct in this scenario? (Choose two.)

- A. You must configure a static route in the main routing instance for the 10.1.2.0/24 prefix that uses the VPN-A.inet.0 table as the next hop.
- B. You must configure a RIB group on PE-1 to leak a default route from the inet.0 table to the VPN-A.inet.0 table.
- C. You must configure a static route in the main routing instance for the 203.0.113.1/32 prefix that uses the VPN-A.inet.0 table as the next hop.
- D. You must configure a RIB group on PE-1 to leak the 10.1.2.0/24 prefix from the VPN-A.inet.0 table to the inet.0 table.

Answer: B,C

NEW QUESTION # 46

Which two statements are correct regarding the PIM DR in a PIM-SM domain? (Choose two.)

- A. The source DR sends PIM register messages from the source network to the RP.
- B. The receiver DR sends PIM join and PIM prune messages from the receiver network toward the RP.
- C. If the DR priorities match, the router with the lowest IP address is selected as the DR.
- D. By default, PIM DR election is performed on point-to-point links.

Answer: A,B

Explanation:

In PIM-SM (Protocol Independent Multicast - Sparse Mode), the Designated Router (DR) plays a crucial role in multicast forwarding. The DR is responsible for various tasks depending on whether it is connected to the source or the receiver. Let's analyze each statement regarding the PIM DR in a PIM-SM domain.

1. **Statement A: The source DR sends PIM register messages from the source network to the RP.**

- Correct. In PIM-SM, the DR on the source's local network is responsible for encapsulating multicast packets in PIM Register

2. ****Statement B: If the DR priorities match, the router with the lowest IP address is selected as the DR.****

3. ****Statement C: The receiver DR sends PIM join and PIM prune messages from the receiver network toward the RP.****

4. ****Statement D: By default, PIM DR election is performed on point-to-point links.****

****Conclusion**:**

****A. The source DR sends PIM register messages from the source network to the RP.****

****References**:**

Overview](https://www.juniper.net/documentation/en_US/junos/topics/concept/pim-sparse-mode-overview.html

7761](<https://tools.ietf.org/html/rfc7761>) which details the PIM-SM protocol, including DR roles and election procedures.
