The latest JN0-664 exam torrent covers all the qualification exam simulation questions in recent years, including the corresponding matching materials at the same time. Do not have enough valid JN0-664 practice materials, can bring inconvenience to the user, such as the delay progress, learning efficiency and to reduce the learning outcome was not significant, these are not conducive to the user persistent finish learning goals. Therefore, to solve these problems, the JN0-664 test material is specially designed for you to pass the JN0-664 exam.

Due to professional acumen of expert's, our JN0-664 guide quiz has achieved the highest level in proficiency's perspective. For your particular inclination, we have various versions of our JN0-664 exam braindumps for you to choose: the PDF, the Software version and the APP online. Now take a look of their features and you can get realized of our JN0-664 Training Materials better. And as long as you purchase our JN0-664 study engine, you can enjoy free updates for one year long.

Reliable JN0-664 Valid Exam Papers – The Best Exam Quizzes for JN0-664 - Updated New JN0-664 Test Duration

The Service Provider, Professional (JNCIP-SP) JN0-664 practice test is available in three compatible and user-friendly formats.

These formats are JN0-664 desktop practice test software, Service Provider, Professional (JNCIP-SP) JN0-664 web-based practice exam, and Juniper JN0-664 PDF dumps file. All three formats of JN0-664 study material contain actual and verified Service Provider, Professional (JNCIP-SP) JN0-664 Exam Dumps that will help you boost your exam preparation. The Juniper desktop practice test software and web-based JN0-664 practice test both simulate the actual exam environment and identify your mistakes.

Juniper Service Provider, Professional (JNCIP-SP) Sample Questions (Q65-Q70):

NEW QUESTION # 65

Exhibit

The exhibit is a screenshot of a network configuration or command output. It shows a BGP advertisement for the community 'target:64512:5678' with the attribute 'mac-mobility:0x0' and '(sequence 4)'. The text is in a monospaced font, typical of network device outputs.

You have MAC addresses moving in your EVPN environment

Referring to the exhibit, which two statements are correct about the sequence number? (Choose two)

- A. It identifies MAC addresses that should be discarded.
- B. It is advertised using a Type 2 message
- C. It resolves conflicting MAC address ownership claims.
- D. It helps the local PE to identify the latest advertisement.

Answer: B,D

Explanation:

In an EVPN (Ethernet Virtual Private Network) environment, MAC address mobility is a critical feature that allows devices to move across different locations while ensuring the network consistently tracks their MAC addresses. Let's break down the components in the exhibit and analyze the correct statements.

Understanding MAC Mobility and Sequence Numbers in EVPN

In EVPN, MAC mobility is managed through sequence numbers that are included in Type 2 MAC/IP advertisements.

The sequence number tracks MAC movement events and is used to determine the most recent update when a MAC address appears on different PEs (Provider Edge devices).

When a MAC address moves between locations, the EVPN PEs increment the sequence number and advertise it to resolve conflicts and determine which PE has the most up-to-date information.

Now, Let's Review the Options:

- ☐ C. It helps the local PE to identify the latest advertisement.

Correct:

The sequence number plays a key role in resolving MAC address conflicts. If multiple PEs advertise the same MAC address, the PE compares the sequence numbers to determine which update is the latest.

A higher sequence number indicates a more recent MAC update.

- ☐ D. It is advertised using a Type 2 message.

Correct:

EVPN MAC/IP advertisements use BGP EVPN Type 2 messages to carry MAC addresses, IP addresses (optional), and their associated sequence numbers.

Type 2 advertisements are used to track MAC mobility and IP reachability information in the EVPN.

Why the Other Options Are Incorrect:

- ☐ A. It identifies MAC addresses that should be discarded.

Incorrect:

The sequence number doesn't identify MAC addresses that need to be discarded.

Instead, it resolves conflicts by determining the most recent MAC address advertisement based on the highest sequence number.

- ☐ B. It resolves conflicting MAC address ownership claims.

Partially true, but misleading:

While it's true that sequence numbers are used in conflict resolution, the sequence number itself doesn't directly resolve ownership claims. It only helps determine which advertisement is more recent. The actual conflict resolution happens through the comparison of the advertisements and sequence numbers.

Final answer:

- ☐ C. It helps the local PE to identify the latest advertisement.
- ☐ D. It is advertised using a Type 2 message.

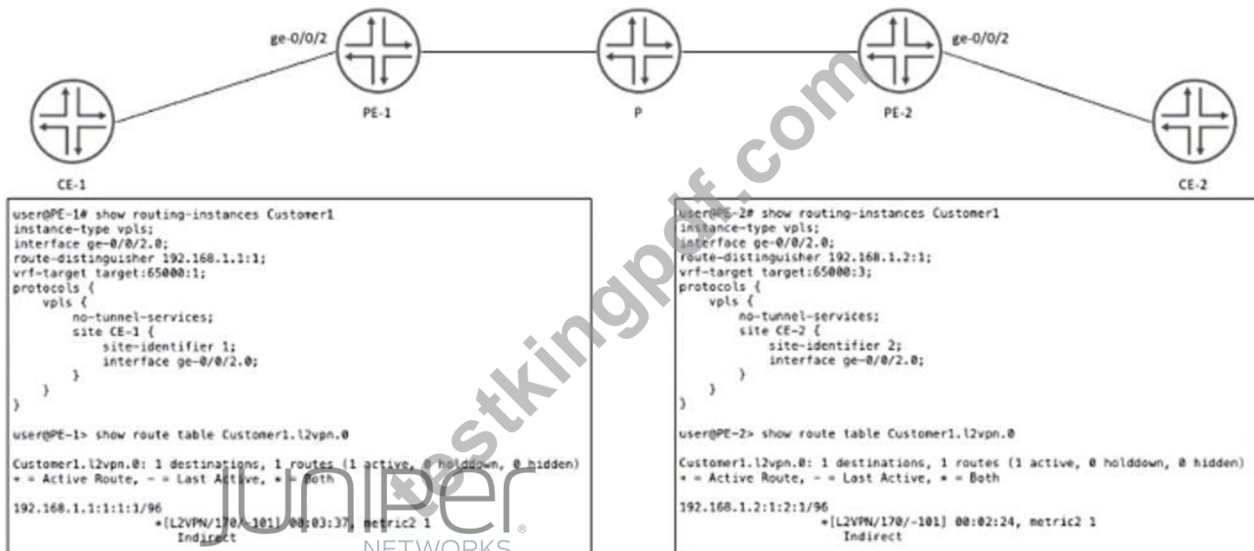

Reference from Juniper Documentation:

Juniper EVPN Configuration Guide:

"In EVPN MAC/IP advertisements, sequence numbers track the mobility of MAC addresses and are used to resolve conflicts when the same MAC address is advertised by multiple PEs. The PE with the higher sequence number has the most recent information."

NEW QUESTION # 66

You are examining an L3VPN route that includes the information shown in the exhibit.
Which statement is correct in this scenario?

- A. The information shows a Type 0 route distinguisher.
- B. The information shows a Type 2 route distinguisher.
- C. The information shows a Type 1 route distinguisher.
- D. The information shows a route target.

Answer: C

Explanation:

Type 1: When Type value is 1, the Administrator field is 4-bytes and Assigned Number field is 2-bytes.

The Administrator field should be set to the IP address (public IP addresses should be used). The Assigned Number field contains a number from a numbering space that is administered by the enterprise to which the IP address has been assigned by the appropriate authority.

NEW QUESTION # 67

Which two statements are correct regarding bootstrap messages that are forwarded within a PIM sparse mode domain? (Choose two.)

- A. Bootstrap messages are forwarded to all routers within a PIM sparse-mode domain.
- B. Bootstrap messages are used to notify which router is the PIM RP.
- C. Bootstrap messages are forwarded only to routers that explicitly requested the messages within the PIM sparse-mode domain.
- D. Bootstrap messages distribute RP information dynamically during an RP election.

Answer: A,D

NEW QUESTION # 68

Which two statements are correct about VPLS tunnels? (Choose two.)

- A. LDP-signaled VPLS tunnels use auto-discovery to provision sites
- B. LDP-signaled VPLS tunnels only support control bit 0.
- C. BGP-signaled VPLS tunnels can use either RSVP or LDP between the PE routers.
- D. BGP-signaled VPLS tunnels require manual provisioning of sites.

Answer: B,C

Explanation:

<https://www.juniper.net/documentation/us/en/software/nce/feature-guide-virtual-private-lan-service/topics/task/v>

<https://www.juniper.net/documentation/us/en/software/junos/vpn-l2/topics/concept/vpns-configuring-vpls-routin>

NEW QUESTION # 69

Which two statements are correct about reflecting inet-vpn unicast prefixes in BGP route reflection? (Choose two.)

- A. Clients add their originator ID when advertising routes to their route reflector
- B. Route reflectors add their cluster ID to the AS path when readvertising client routes.
- C. A BGP peer does not require any configuration changes to become a route reflector client.
- D. Route reflectors do not change any existing BGP attributes by default when advertising routes.

Answer: C,D

Explanation:

Explanation

Route reflection is a BGP feature that allows a router to reflect routes learned from one IBGP peer to another IBGP peer, without requiring a full-mesh IBGP topology. Route reflectors do not change any existing BGP attributes by default when advertising routes, unless explicitly configured to do so. A BGP peer does not require any configuration changes to become a route reflector client, only the route reflector needs to be configured with the client parameter under [edit protocols bgp group group-name neighbor neighbor-address] hierarchy level.

NEW QUESTION # 70

.....

TestkingPDF JN0-664 valid training material is the efforts of our professional experts. They edit and compile the JN0-664 questions and answers using their professional technology and hands-on experience. So if you want to pass with 100% guarantee, JN0-664 valid exam files will give you security and high scores. You will complete your Juniper JN0-664 exam preparation in a short time and attend the actual test with comfortable mood.
