

Juniper JN0-105 Training Materials - Reliable JN0-105 Exam Pattern

JUNIPER JN0-105 STUDY GUIDE PDF

Juniper JNCIA Certification Questions & Answers

Details of the Exam-Syllabus-Questions

JN0-105

Juniper Networks Certified Associate Junos

65 Questions Exam – Variable (60-70% Approx.) Cut Score – Duration of 90 minutes

BONUS!!! Download part of Dumpcollection JN0-105 dumps for free: <https://drive.google.com/open?id=1g-3aaObWZllilekT43-QNCL9eqbbmgMB>

Do you want to find a high efficiency way to prepare for JN0-105 exam test? As we all know, high efficiency will produce unbelievable benefits. With our Juniper JN0-105 study pdf, you can make full use of your spare time. If you are tired of screen reading, you can print JN0-105 Pdf Dumps into papers. You take your spare time to prepare and study. You will get your JN0-105 exam certification with less time investment. Come on, everyone, Choose JN0-105 test dumps, you will succeed.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.
Topic 2	• Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.
Topic 3	• User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.

Topic 4	Operational Monitoring and Maintenance: Different methods of monitoring or maintaining Junos devices are identified in this topic. Lastly, it discusses monitoring or maintenance procedures for a Junos device.
Topic 5	Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device
Topic 6	Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.

Marvelous JN0-105 Training Materials Covers the Entire Syllabus of JN0-105

As everybody knows, the most crucial matter is the quality of Junos, Associate (JNCIA-Junos) study question for learners. We have been doing this professional thing for many years. Let the professionals handle professional issues. So as for us, we have enough confidence to provide you with the best JN0-105 Exam Questions for your study to pass it. Only with strict study, we write the latest and the specialized study materials. We can say that our JN0-105 exam questions are the most suitable for examinee to pass the exam.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q105-Q110):

NEW QUESTION # 105

What are two physical interface properties? (Choose two.)

- A. IP address
- B. routing protocols
- C. MTU
- D. MAC address

Answer: C,D

Explanation:

Two physical interface properties in Junos OS include the MAC address (A) and the Maximum Transmission Unit (MTU) size (D). The MAC address is a hardware identifier for the network interface, while the MTU size determines the largest packet size that the interface can transmit without needing to fragment the packet.

NEW QUESTION # 106

Click the Exhibit button.

```

[edit protocols ospf]
user@router# show
area 0.0.0.0 {
    interface all;
}
export [ policy1 policy2 policy3 ];
[edit routing-options]
user@router# show
static {
    route 10.10.10.0/24 next-hop 192.168.1.254;
}

```

Referring to the exhibit, OSPF has three export policies that match different static route prefixes. The 10.10.10.0/24 static route does not match any terms in the policy1 routing policy. What happens next in this scenario?

- A. The static route is rejected by the policy1 routing policy.
- B. The static route is evaluated by the policy2 routing policy.
- C. The static route is evaluated by the policy3 routing policy.
- D. The static route is rejected by the default routing policy.

Answer: B

Explanation:

In Junos, when multiple policies are applied to a routing protocol for route export, the routes are evaluated in the order in which the policies are listed. In the exhibit, the OSPF configuration has three export policies listed: policy1, policy2, and policy3. The static route 10.10.10.0/24 does not match any terms in policy1; therefore, it is not rejected by policy1 but is instead passed on to the next policy in the sequence, which is policy2.

If the static route matches a term in policy2 that permits the route, it will be exported into OSPF. If it does not match in policy2, it will then be evaluated by policy3. If there is no match in policy3 as well, and assuming there are no more policies listed, the route would then be subject to the default routing policy behavior, which typically rejects the route unless an explicit accept statement is present in the policies.

NEW QUESTION # 107

Exhibit

```
policy-options {
  policy-statement Load-Balance-Policy {
    term Load-Balance {
      then {
        load-balance per-flow;
        accept;
      }
    }
  }
}
```

```
routing-options {
  router-id 192.168.100.11;
  autonomous-system 65201;
  forwarding-table {
    export Load-Balance-Policy;
  }
}
```

Referring to the exhibit, which two statements are correct? (Choose two.)

- A. The policy must be applied under the protocols hierarchy.
- B. The policy enables per-packet load balancing.
- C. The policy enables equal cost load balancing in the forwarding table.
- D. The policy enables flow-based load balancing.

Answer: C,D

Explanation:

The load-balance per-flow statement in the Junos OS policy-options configuration enables flow-based load balancing in the forwarding table. This means that the traffic is distributed across multiple paths based on flows, where a flow is typically identified by attributes such as source and destination IP addresses, and possibly layer 4 information like TCP/UDP ports. This allows for more granular and efficient utilization of available paths, avoiding overloading a single path. The policy does not enable per-packet load balancing, which would send individual packets of the same flow over different paths, potentially causing out-of-order delivery issues. The policy's placement in the forwarding-table export suggests it's intended to influence forwarding behavior, not just routing protocol decisions, and does not necessarily have to be applied under the protocols hierarchy.

NEW QUESTION # 108

You are configuring a firewall filter on a Juniper device.

In this scenario, what are two valid terminating actions? (Choose two.)

- A. 3next term
- B. 1 count
- C. 2discard
- D. 4accept

Answer: C,D

Explanation:

In Juniper firewall filter configurations, "discard" and "accept" are two valid terminating actions for a term within a filter. The "discard" action drops the packet, preventing it from reaching its intended destination, while the "accept" action allows the packet to pass.
