

Juniper JN0-336 Dumps Discount - Pdf JN0-336 Version

Our JN0-336 practice tests have established impressive recognition throughout the industry, diversified modes of learning enables the JN0-336 exam candidates to capture at the real exam scenario. Tremendous quality of our JN0-336 products makes the admirable among the professionals. Our practice tests are on demand, attending the needs of JN0-336 Exams more comprehensively and dynamically as well. Lift up your learning tendency with Lead1Pass practice tests training. Conceptual understanding matters the most for your success, technical excellence is certain with Lead1Pass training as our experts keep it on high priority.

People who get JN0-336 certification show dedication and willingness to work hard, also can get more opportunities in job hunting. It seems that JN0-336 certification becomes one important certification for many IT candidates. While a good study material will do great help in JN0-336 Exam Preparation. Lead1Pass JN0-336 will solve your problem and bring light for you. JN0-336 exam questions and answers are the best valid with high hit rate, which is the best learning guide for your Juniper JN0-336 preparation.

Pdf Juniper JN0-336 Version | Latest JN0-336 Test Notes

Our experts all have a good command of exam skills to cope with the JN0-336 preparation materials efficiently in case you have limited time to prepare for it, because all questions within them are professionally co-related with the JN0-336 exam. Moreover, to write the Up-to-date JN0-336 Practice Braindumps, they never stop the pace of being better. As long as you buy our JN0-336 study quiz, you will find that we update it from time to time according to the exam center.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q95-Q100):

NEW QUESTION # 95

You are troubleshooting unexpected issues on your JIMS server due to out of order event log timestamps. Which action should you take to solve this issue?

- A. Enable time synchronization on the JIMS server.
- B. Enable time synchronization on the client devices.
- **C. Enable time synchronization on the domain controllers.**
- D. Enable time synchronization on the SRX Series devices.

Answer: C

Explanation:

To solve the issue of out of order event log timestamps on your JIMS server, you should enable time synchronization on the domain controllers. JIMS (Juniper Identity Management Service) is a Windows service that collects user, device, and group information from Active Directory domains or syslog sources and provides it to SRX Series devices and CSO for identity-based security policies. JIMS relies on the timestamps of the event logs generated by the domain controllers to track user logins, logouts, and IP address changes. If the domain controllers have different or inaccurate clocks, the event logs may have out of order or incorrect timestamps, which can cause JIMS to miss or misinterpret some events and affect its accuracy and performance. Therefore, you should ensure that all the domain controllers in your network are synchronized with a reliable time source, such as an NTP server or

a Windows Time service. Reference: = Juniper Identity Management Service User Guide, Juniper Identity Management Service Feature Guide, Configure JIMS Collector to Get Microsoft Event Logs, Considerations for timestamps in centralized logging platforms

NEW QUESTION # 96

Which two statements about SRX chassis clustering are correct? (Choose two.)

- A. SRX chassis clustering supports active/passive for the control plane.
- B. SRX chassis clustering only supports active/passive for the data plane.
- C. SRX chassis clustering supports active/active for the control plane.
- D. SRX chassis clustering supports active/passive and active/active for the data plane.

Answer: A,D

Explanation:

SRX chassis clustering allows for both active/passive and active/active configurations for the data plane.

In an active/passive setup, one node is active (handling traffic) while the other remains passive (idle and waiting to take over in case of failure). In an active/active setup, both nodes can handle traffic simultaneously, distributing different traffic flows or services between them for load balancing and redundancy.

For the control plane, SRX chassis clustering typically operates in an active/passive mode. This means one node actively handles the control plane responsibilities, such as managing routing tables and maintaining sessions, while the other stands by ready to take over these tasks if the active node fails.

NEW QUESTION # 97

Which two statements are true about the vSRX? (Choose two.)

- A. It does not have VMXNET3 vNIC support.
- B. Linux is the base OS.
- C. It has VMXNET3 vNIC support.
- D. UNIX is the base OS.

Answer: B,C

Explanation:

Reference: Juniper Networks Security, Specialist (JNCIS-SEC) Study Guide, Chapter 1: Introduction to Junos Security, page 1-8. The vSRX is a virtual security appliance that runs on a virtual machine. It provides firewall, VPN, and other security services in a virtualized environment.

The vSRX is based on a version of Junos OS that is optimized for virtualization. It runs on a Linux kernel and uses a KVM hypervisor. It supports VMware ESXi and KVM hypervisors.

The vSRX has support for VMXNET3 vNICs, which are high-performance virtual network interfaces provided by VMware. These interfaces can provide higher throughput and lower CPU utilization than other virtual NIC types.

NEW QUESTION # 98

You want to deploy a virtualized SRX in your environment.

In this scenario, why would you use a vSRX instead of a cSRX? (Choose two.)

- A. The vSRX supports Layer 2 and Layer 3 configurations.
- B. Only the vSRX provides clustering.
- C. The vSRX has faster boot times.
- D. Only the vSRX provides NAT, IPS, and UTM services

Answer: A,B

Explanation:

vSRX provides flexible networking capabilities which include support for both Layer 2 (data link) and Layer 3 (network) configurations. This allows it to handle a variety of routing and switching tasks within virtual environments.

Clustering capability, which involves grouping multiple vSRX instances to operate as a single entity for redundancy and high availability, is a feature specific to vSRX. This is critical in environments where continuous uptime and resilience are required.

NEW QUESTION # 99

Which two statements are true about Juniper ATP Cloud? (Choose two.)

- A. Juniper ATP Cloud only uses one antivirus software package to analyze files.
- B. Juniper ATP Cloud does not use antivirus software packages to protect against zero-day threats.
- C. Juniper ATP Cloud uses antivirus software packages to protect against zero-day threats.
- D. Juniper ATP Cloud uses multiple antivirus software packages to analyze files.

Answer: B,D

Explanation:

Two statements that are true about Juniper ATP Cloud are:

Juniper ATP Cloud uses multiple antivirus software packages to analyze files: Juniper ATP Cloud is a cloud-based service that provides advanced threat prevention and detection for your network. It integrates with SRX Series firewalls and MX Series routers to analyze files and network traffic for signs of malicious activity. Juniper ATP Cloud uses multiple antivirus software packages from different vendors to scan files for known malware signatures and provide a comprehensive verdict based on their results.

Juniper ATP Cloud does not use antivirus software packages to protect against zero-day threats: Juniper ATP Cloud protects against zero-day threats by using dynamic analysis, not antivirus software packages.

Dynamic analysis is a method of executing files in a sandbox environment and observing their behavior and network interactions.

Dynamic analysis can uncover unknown malware that may evade static analysis or signature-based detection methods.
