If we redouble our efforts, our dreams will change into reality. Although we might come across many difficulties during pursuing our dreams, we should never give up. If you still have dreams, our JN0-460 study materials will help you realize your dreams. Where is a will, there is a way. And our JN0-460 Exam Questions are the exact way which can help you pass the exam and get the certification with ease. Just have a try on our JN0-460 practice guide, then you will know you can succeed.

With JN0-460 training quiz, you only need to pay half the money to get the help of the most authoritative experts. JN0-460 exam questions are also equipped with a mock examination function, that allowing you to find your own weaknesses at any time during the learning process of our JN0-460 Study Materials, and to constantly improve your own learning methods. It also allows you to familiarize yourself with the examination environment in advance that helps you to avoid any emergency in the exam.

Latest Released Juniper JN0-460 Exam Questions And Answers - JN0-460 Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Latest Material

As is known to us, the quality is an essential standard for a lot of people consuming movements, and the high quality of the JN0-460 study materials is always reflected in the efficiency. We are glad to tell you that the JN0-460 study materials from our company have a high quality and efficiency. If you decide to choose our study materials as you first study tool, it will be very possible for you to pass the JN0-460 Exam successfully, and then you will get the related certification in a short time.

Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q45-Q50):

NEW QUESTION # 45

Which two items are displayed on the Switches page using the List view?

- A. Uptime
- B. Cloud Connected Switches
- C. Total Allocated AP Power
- D. Throughput

Answer: B,C

NEW QUESTION # 46

What are two limitations of using LLDP for identifying wired clients? (Choose two.)

- A. It is not scalable to large networks.
- B. It is supported by all wired client devices.
- C. It requires LLDP to be configured on network devices.
- D. It only operates between directly connected devices.

Answer: C,D

Explanation:

Link Layer Discovery Protocol (LLDP) is a Layer 2 discovery protocol that allows network devices to advertise identity and capabilities to directly connected neighbors. While LLDP is useful for basic topology discovery, it has two key limitations in Wired Assurance client identification:

"LLDP operates at Layer 2 between directly connected devices and must be explicitly enabled on all participating network elements to provide neighbor information. It cannot discover devices beyond the first physical hop." Option A: Correct - LLDP must be configured and enabled on each network device to function.

Option B: Incorrect - LLDP itself is scalable but limited to direct adjacency.

Option C: Correct - LLDP only works between directly connected devices.

Option D: Incorrect - not all clients support LLDP; however, the question asks for limitations of using LLDP, not lack of support.

NEW QUESTION # 47

You receive a Marvis Action that reports "Port negotiation mismatch detected on EX3400-48P." In this scenario, which two steps should you take to resolve the issue? (Choose two.)

- A. Force the connected device port to half-duplex mode.
- B. Verify that both switch ports are set to auto-negotiate speed and duplex.
- C. Check that the connected device supports 802.3 autonegotiation.
- D. Replace the switch uplink SFP module.

Answer: B,C

Explanation:

A port negotiation mismatch occurs when the local and remote interfaces fail to agree on common speed or duplex settings.

Marvis Wired Assurance automatically detects this by analyzing telemetry from the switch's physical interfaces.

You can resolve this by ensuring auto-negotiation is enabled on both ends (A) and verifying the peer device supports the 802.3 autonegotiation standard (D).

Manually forcing half-duplex or replacing hardware is unnecessary unless the hardware is faulty.

"Marvis Wired Actions correlate interface negotiation errors with LLDP neighbor data to pinpoint mismatched configurations, helping administrators quickly verify speed/duplex compatibility and 802.3 autonegotiation support." References:

NEW QUESTION # 48

The primary benefit of Campus Fabric Core-Distribution model is:

- A. Simplified cable management

- B. Reduction in network bandwidth
- **C. Scalability and high availability**
- D. Increased network latency

Answer: C

NEW QUESTION # 49

Which three administrator roles allow you to claim switches? (Choose three.)

- **A. Super User**
- B. Helpdesk
- C. Observer
- **D. Network Admin**
- **E. Installer**

Answer: A,D,E

Explanation:

In Juniper Mist Cloud, administrative roles define what actions a user can perform within an organization. The ability to claim and onboard switches is granted to roles that have configuration or deployment privileges.

"Only users with Super User, Network Admin, or Installer roles can claim, onboard, or delete devices such as access points, switches, or gateways within a Mist organization." Option A (Network Admin): Correct - can claim and manage network devices.

Option B (Installer): Correct - role specifically intended for device onboarding and site setup.

Option C (Super User): Correct - full administrative privileges including device claiming.

Option D (Observer): Incorrect - view-only access.

Option E (Helpdesk): Incorrect - limited to troubleshooting functions, not device management.
