Oracle 1Z1-771 Online Training, 1Z1-771 New Exam Materials

The 1Z1-771 desktop practice exam software and 1Z1-771 web-based practice test is very beneficial for the applicants in their preparation because these Oracle 1Z1-771 practice exam provides them with the Oracle 1Z1-771 Actual Test environment. ActualVCE offers Oracle 1Z1-771 practice tests that are customizable. It means takers can change durations and questions as per their learning needs.

Oracle APEX Cloud Developer Professional Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which statement is true about importing an existing application into your workspace?

- A. The import process does not import the supporting objects defined during the export.
- B. You cannot change the application ID during the import process.
- C. You cannot import an APEX application exported from the latest APEX version to an old APEX version.

Answer: C

Explanation:

Importing an APEX application involves transferring its definition (exported as a .sql file):

C . You cannot import an APEX application exported from the latest APEX version to an old APEX version: APEX enforces backward compatibility limits. An app exported from 23.2 (latest features like AI Assistants) can't import into 19.2, as older versions lack support for newer metadata (e.g., APEX_AI tables). The import wizard checks the version and rejects incompatible files.

A . You cannot change the application ID: False; the import wizard prompts for a new ID if there's a conflict or if you choose to override.

B . Supporting objects not imported: False; if included in the export (via "Include Supporting Objects"), they're imported (e.g.,

tables, triggers), unless skipped explicitly.

Technical Insight: Export files contain a version check (e.g., `apex_version := '23.2';`), causing rejection if the target instance's APEX_VERSION is lower.

Use Case: Moving an app from a dev instance (23.2) to prod (23.2) works, but not to an outdated test instance (19.1).

Pitfall: Always match versions or upgrade the target instance first.

NEW QUESTION # 26

Which client credentials are used for authentication during the 'Check Syntax' process?

- A. APEX Developer credentials
- B. APEX Workspace Admin credentials
- C. Database schema credentials

Answer: C

Explanation:

The "Check Syntax" process in APEX, typically used in SQL Workshop or when validating code, authenticates using Database schema credentials. These are the credentials of the schema associated with the APEX workspace (e.g., username/password of the schema like "HR"). This ensures the process has access to parse and validate SQL or PL/SQL against the database objects in that schema.

APEX Workspace Admin credentials: These are for managing workspaces, not executing database-level syntax checks.

APEX Developer credentials: These authenticate developers into the APEX IDE, not the database runtime environment.

This design aligns with APEX's security model, where database operations are tied to the schema, ensuring accurate validation and error reporting (e.g., missing privileges or invalid objects).

NEW QUESTION # 27

Which Process type do you use to run multiple processes in the background in APEX?

- A. Execute Code
- B. Execute JavaScript Code
- C. Execute Server-side Code
- D. Execution Chain

Answer: D

Explanation:

To run multiple processes in the background:

D . Execution Chain: This process type allows chaining multiple processes (e.g., PL/SQL, REST calls) to execute sequentially or conditionally in the background, managed via the Process Chain framework. It's ideal for complex, asynchronous tasks (e.g., batch updates).

A . Execute Code: Not a process type in APEX; likely a misnomer.

B . Execute Server-side Code: Runs a single PL/SQL block synchronously, not multiple background tasks.

C . Execute JavaScript Code: Client-side, not suited for background server processes.

Use case: Chain processes like data validation, logging, and email sending without blocking the UI.

NEW QUESTION # 28

Which two are prerequisites to use the REST-enabled SQL feature in Oracle APEX?

- A. REST-enable the schema in the remote Oracle Database by using `ORDS.ENABLE_SCHEMA`.
- B. Install Oracle APEX in the remote Oracle Database.
- C. Install ORDS 19.x or later on the remote Oracle Database.
- D. Create a database link to the remote Oracle Database in the local APEX schema.

Answer: A,C

Explanation:

To use REST-enabled SQL in APEX:

Install ORDS 19.x or later: Oracle REST Data Services (ORDS) must be installed and configured on the remote database.

REST-enable the schema: The schema on the remote database must be REST-enabled using ORDS.ENABLE_SCHEMA to allow SQL execution via REST.

A database link is not required, and installing APEX on the remote database is unnecessary since REST-enabled SQL connects APEX to a remote schema via ORDS.

NEW QUESTION # 29

Which two are valid evaluation points for Authorization Schemes?

- A. Once per user
- B. Once per page view
- C. Once per session
- D. Never

Answer: B,C

Explanation:

Authorization Schemes in APEX can be evaluated at:

Once per page view: Checks authorization each time a page is rendered.

Once per session: Checks once per user session, caching the result.

Once per user and Never are not valid evaluation points in the Authorization Scheme settings.

NEW QUESTION # 30

.....

After years of unremitting efforts, our 1Z1-771 exam materials and services have received recognition and praises by the vast number of customers. An increasing number of candidates choose our 1Z1-771 study braindumps as their exam plan utility. There are a lot of advantages about our 1Z1-771 training guide. Not only our 1Z1-771 learning questions are always the latest and valid, but also the prices of the different versions are quite favourable.
