Fortinet FCP - FortiManager 7.4 Administrator Sample Questions (Q62-Q67):

NEW QUESTION # 62

In the event that one of the secondary FortiManager devices fails, which action must be performed to return the FortiManager HA manual mode to a working state?

- A. Reboot the failed device to remove its IP from the primary device.
- **B. Reconfigure the primary device to remove the peer IP of the failed device.**
- C. The FortiManager HA state transition is transparent to administrators and does not require any reconfiguration.
- D. Manually promote one of the working secondary devices to the primary role, and reboot the old primary device to remove the peer IP of the failed device.

Answer: B

Explanation:

If the secondary FortiManager fails, the administrator can reconfigure the primary device to remove the secondary configuration.

NEW QUESTION # 63

Which configuration setting for FortiGate is part of an ADOM-level database on FortiManager?

- A. Security profiles
- B. NSX-T Service Template
- C. SNMP
- **D. Routing**

Answer: D

NEW QUESTION # 64

Refer to the exhibit.

<input type="checkbox"/>	#	Name	Install On	From	To
<input type="checkbox"/>	1	Ping_Access	ISFW (root) ISFW (Student)	port3	port1
<input type="checkbox"/>	2	Web	Local-FortiGate (root) ISFW (Student)	port3	port1
<input type="checkbox"/>	3	Source_Device	Installation Targets	port3	port1
<input type="checkbox"/>	Implicit (4/4 Total:1)				
<input type="checkbox"/>	4	Implicit Deny	Installation Targets	any	any

Given the configuration shown in the exhibit, which two conclusions can you draw from the installation targets in the Install On column? (Choose two.)

- A. Policy seq.# 1 will be installed on the ISFW device root[NAT] and Student[NAT] VDOMs only.
- B. Policy seq.# 2 will be installed on all managed devices and VDOMs that are listed under Installation Targets
- C. Policy seq.# 3 will be skipped because no installation targets are specified.
- D. Policy seq.# 2 will not be installed on the Local-FortiGate root VDOM because there is no root VDOM in the Installation Target

Answer: A,B

Explanation:

* Option A: Policy seq.# 3 will be installed on all managed devices and VDOMs that are listed under Installation Targets. This is correct. The "Install On" column indicates that the policy is targeted for installation on all listed managed devices and VDOMs under Installation Targets.

* Option D: Policy seq.# 1 will be installed on the ISFW device root[NAT] and Student[NAT] VDOMs only. This is correct. Policy sequence #1 specifies that it will be installed only on the ISFW device and the VDOMs 'root[NAT]' and 'Student[NAT]' as indicated by the "Install On" column.

Explanation of Incorrect Options:

* Option B: Policy seq.# 3 will be skipped because no installation targets are specified is incorrect because it is clearly listed under "Installation Targets," which means it will be installed according to the specified configuration.

* Option C: Policy seq.# 2 will not be installed on the Local-FortiGate root VDOM because there is no root VDOM in the Installation Targets is incorrect as the exhibit does not show any specific exclusion for seq.# 2 on the Local-FortiGate root VDOM.

FortiManager References:

* Refer to the FortiManager Administration Guide sections on "Policy Packages" and "Policy Installation Targets" for more details.

NEW QUESTION # 65

What is the purpose of ADOM revisions?

- A. To save the FortiManager configuration in the System Checkpoints
- B. To revert individual policy packages and device-level settings for a managed FortiGate
- C. To save the current state of all policy packages and objects for an ADOM
- D. To save the current state of the whole ADOM

Answer: C

Explanation:

* Option B: To save the current state of all policy packages and objects for an ADOM is the correct answer. ADOM (Administrative Domain) revisions in FortiManager are used to create a snapshot of the current state of all policy packages and objects associated with an ADOM. This allows administrators to save a specific configuration state and revert to it if necessary. It helps in managing changes and recovering from configuration errors or unintended changes.

* Explanation of Incorrect Options:

* Option A: To save the current state of the whole ADOM is incorrect because ADOM revisions specifically save only the policy packages and object configurations, not the entire state of the ADOM, which may include logs, reports, and other non-policy data.

* Option C: To revert individual policy packages and device-level settings for a managed FortiGate is incorrect as ADOM revisions are not meant for reverting individual policy packages or device settings; they are designed to handle the entire set of policy packages and objects within an ADOM.

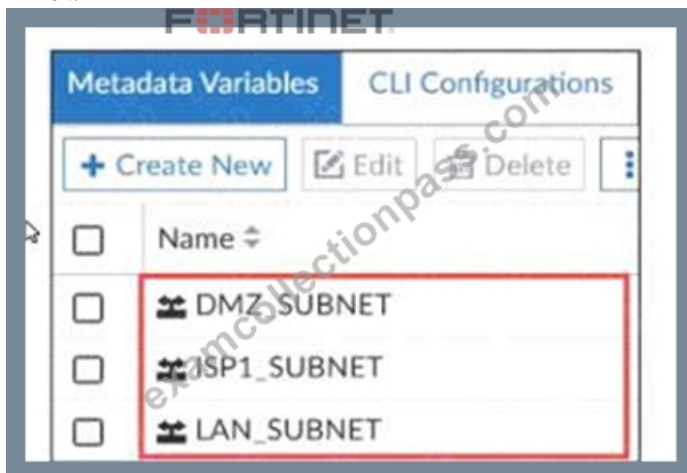

* Option D: To save the FortiManager configuration in the System Checkpoints is incorrect because ADOM revisions do not function as system checkpoints for FortiManager itself; they are specific to ADOM policy packages and objects.

FortiManager References:

* Refer to the FortiManager 7.4 Administration Guide, "ADOM Management" section, which describes the purpose and usage of ADOM revisions for configuration management and restoration.

NEW QUESTION # 66

Exhibit.

What is true about the objects highlighted in the image?

- A. They cannot be created in the global database ADOM.
- B. They can be set to optional or required.
- C. They are available across all ADOMs by default.
- **D. They can be used as variables in scripts.**

Answer: D

NEW QUESTION # 67
