So genießt ZertFragen einen guten Ruf in der IT-Branche.

SAP C_S4TM_2023 Prüfungsplan:

Thema	Einzelheiten

Thema 1	• Transportation Management for Logistics Service Provider (LSP): This topic focuses on order management and transportation processes specific to LSPs, including forwarding orders.
Thema 2	• Transportation Planning: The sub-topics here include network setup, profile configuration, and VSR optimizer calibration for automatic planning, all essential for efficient transportation planning.
Thema 3	• SAP Transportation Management Overview and Fundamentals: This topic covers the general processes and functional areas of SAP Transportation Management, including external and embedded systems. It also discusses transportation tasks and their management.
Thema 4	• Charge Calculation & Freight Settlement: Setup, integration, and cost distribution are the key sub-topics here. This topic also covers freight contracts and strategic procurement and selling.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management C_S4TM_2023 Prüfungsfragen mit Lösungen (Q67-Q72):

67. Frage

In which SAP Fiori apps can you define whether business shares are considered in the carrier selection process? Note: There are 2 correct answers to this question.

- A. Create Business Share
- B. Edit Carrier Selection Settings
- C. Define Transportation Lane
- D. Edit Freight Agreement

Antwort: A,B

Begründung:

In SAP S/4HANA Transportation Management, business shares are used to distribute transportation volumes across multiple carriers based on predefined percentages. According to the SAP documentation, the following SAP Fiori apps allow users to define whether business shares are considered in the carrier selection process:

* Create Business Share (B) enables users to define business share agreements, including whether they are active for carrier selection.

* Edit Carrier Selection Settings (C) allows users to configure settings that determine how business shares influence carrier selection, such as enabling or disabling their consideration.

The other options are incorrect:

* Edit Freight Agreement (A) is used for managing freight agreement details, such as rates, but does not directly control business share settings for carrier selection.

* Define Transportation Lane (D) is used for configuring transportation lanes, including costs and priorities, but not for defining business shares.

68. Frage

What are some of the parameters that you can define in the forwarding order type?

Note: There are 3 correct answers to this question.

- A. Shipping type
- B. Bill of lading type
- C. Dangerous goods profile
- D. Planning profile
- E. Export forwarding order type

Antwort: A,B,E

69. Frage

What SAP TM functionality is available with "Basic Shipping" of SAP S/4HANA Supply Chain for Transportation Management?
There are 3 correct answers to this question.

- A. Transportation planning based on outbound deliveries
- B. Transportation execution without event management
- C. Transportation planning based on sales orders
- D. Package building
- E. Transportation planning based on inbound deliveries

Antwort: A,B,E

70. Frage

You want to use advanced shipping and receiving. What must you define? Note: There are 2 correct answers to this question.

- A. Location with type 1001 (production plant)
- B. Location with type 1200 (loading point)
- C. Location with type 1011 (vendor)
- D. Location with type 1003 (shipping point)

Antwort: C,D

Begründung:

Advanced shipping and receiving (ASR) in SAP S/4HANA Transportation Management integrates transportation management with warehouse management processes, requiring specific location types to be defined. According to the SAP documentation:

* Location with type 1011 (vendor) (A) is required to represent the external supplier or vendor locations involved in the transportation process.

* Location with type 1003 (shipping point) (B) is necessary to define the point from which goods are shipped, typically linked to a plant or warehouse.

The other options are incorrect:

* Location with type 1200 (loading point) (C) is not a standard location type in SAP S/4HANA TM for advanced shipping and receiving; loading points are managed differently.

* Location with type 1001 (production plant) (D) is used for manufacturing processes but is not specifically required for ASR unless it also serves as a shipping point.

71. Frage

You transfer an SAP ERP sales order to SAP TM in the XML monitor of SAP TM you find the message shown in the screenshot. What does this entry mean?

- A. The order-based transportation requirement was created SUCCESSFULLY.
- B. The order-based transportation requirement was NOT created because the message is scheduled for processing but is NOT processed yet.
- C. The order-based transportation requirement was NOT created because the message encountered an error.
- D. The order-based transportation requirement was NOT created because the message was transferred to an external application but the message has error state on outbound side.

Antwort: B
