Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q226-Q231):

NEW QUESTION # 226

Which of the following commands will print important system information such as the kernel version and machine hardware architecture?

- A. info
- B. lspci
- C. **uname**
- D. **arch**
- E. sysinfo

Answer: C,D

Explanation:

The commands that will print important system information such as the kernel version and machine hardware architecture are `uname` and `arch`. The `uname` command prints system information, such as the kernel name, release, version, machine, processor, hardware platform, and operating system. The `arch` command prints the machine hardware name, which is equivalent to `uname -m`. For example, `uname -a` will print `Linux 5.10.0-8- amd64 #1 SMP Debian 5.10.46-4 (2021-08-03) x86_64 GNU/Linux`, and `arch` will print `x86_64`. The `sysinfo` command is not a valid Linux command. The `lspci` command prints information about PCI buses and devices in the system. The `info` command prints documentation for a given topic or command. References: LPI Exam 101 Detailed Objectives, Topic 103: GNU and Unix Commands, Weight: 25, Objective 103.1: Work on the command line, `uname` command, `arch` command, `lspci` command, `info` command

NEW QUESTION # 227
