Our 156-587 study materials are designed carefully. We have taken all your worries into consideration. Also, we adopt the useful suggestions about our 156-587 study materials from our customers. Now, our study materials are out of supply. Thousands of people will crowd into our website to choose the 156-587 study materials. So people are different from the past. Learning has become popular among different age groups. Our 156-587 Study Materials truly offer you the most useful knowledge. You can totally trust us. We are trying our best to meet your demands. Why not give our CheckPoint study materials a chance? Our products will live up to your expectations.

## CheckPoint 156-587 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Advanced Troubleshooting with Logs and Events: This section of the exam measures the skills of Check Point Security Administrators and covers the analysis of logs and events for troubleshooting. Candidates will learn how to interpret log data to identify issues and security threats effectively.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Introduction to Advanced Troubleshooting: This section of the exam measures the skills of Check Point Network Security Engineers and covers the foundational concepts of advanced troubleshooting techniques. It introduces candidates to various methodologies and approaches used to identify and resolve complex issues in network environments.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Advanced Site-to-Site VPN Troubleshooting: This section of the exam measures the skills of Check Point System Administrators and covers troubleshooting site-to-site VPN connections.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Advanced Gateway Troubleshooting: This section of the exam measures the skills of Check Point Network Security Engineers and addresses troubleshooting techniques specific to gateways. It includes methods for diagnosing connectivity issues and optimizing gateway performance.</li></ul>

Topic 5	<ul style="list-style-type: none"> <li>Advanced Client-to-Site VPN Troubleshooting: This section of the exam measures the skills of CheckPoint System Administrators and focuses on troubleshooting client-to-site VPN issues.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Advanced Management Server Troubleshooting: This section of the exam measures the skills of Check Point System Administrators and focuses on troubleshooting management servers. It emphasizes understanding server architecture and diagnosing problems related to server performance and connectivity.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>Advanced Access Control Troubleshooting: This section of the exam measures the skills of Check Point System Administrators in demonstrating expertise in troubleshooting access control mechanisms. It involves understanding user permissions and resolving authentication issues.</li> </ul>

## Why do you need to get help form Actual4Cert CheckPoint 156-587 Exam Questions?

Infinite striving to be the best is man's duty. We have the responsibility to realize our values in the society. Of course, you must have enough ability to assume the tasks. Then our 156-587 learning quiz can give you some help. First of all, you can easily pass the 156-587 Exam and win out from many candidates for our 156-587 study materials are the most effective exam materials in the market. Secondly, you can also learn a lot of the specilized knowledge at the same time.

## CheckPoint Check Point Certified Troubleshooting Expert - R81.20 Sample Questions (Q107-Q112):

### NEW QUESTION # 107

When a User process or program suddenly crashes, a core dump is often used to examine the problem. Which command is used to enable the core-dumping via GAIA clish?

- A. set core-dump enable
- B. set core-dump per process
- C. set core-dump total
- D. set user-dump enable

**Answer: A**

### NEW QUESTION # 108

SmartEvent utilizes the Log Server, Correlation Unit and SmartEvent Server to aggregate logs and identify security events. The three main processes that govern these SmartEvent components are:

- A. cpcu, cplog, cpse
- B. eventiasv, eventiar, eventiacu
- C. fwd, secu, sesrv
- D. cpsemd, cpsead, and DBSync

**Answer: B**

Explanation:

SmartEvent is a unified security event management and analysis solution that collects and analyzes data from multiple sources to identify and respond to security threats. SmartEvent consists of three main components:

Log Server, Correlation Unit, and SmartEvent Server<sup>1</sup>. The three main processes that govern these SmartEvent components are:

\* eventiasv: This process is responsible for indexing the logs received from the Log Server and storing them in the SmartEvent database. It also performs log consolidation and compression to optimize the disk space usage<sup>2</sup>.

\* eventiar: This process is responsible for running the predefined and custom correlation rules on the indexed logs and generating security events based on the rule criteria. It also sends notifications and triggers automatic responses for the security events<sup>3</sup>.

\* eventiacu: This process is responsible for providing the web-based user interface for SmartEvent, which allows the administrators to view, analyze, and manage the security events. It also provides the SmartEvent API for external integration<sup>4</sup>. References: Check

### NEW QUESTION # 109

In some scenarios it is very helpful to use advanced Linux commands for troubleshooting purposes. Which command displays information about resource utilization for running processes and shows additional information for core utilization and memory?

- A. top
- B. ctop
- C. vmstat
- D. mpstat

**Answer: A**

Explanation:

The top command is a Linux command that displays information about resource utilization for running processes and shows additional information for core utilization and memory. The top command provides a dynamic real-time view of the system, showing the processes that are consuming the most CPU, memory, and other resources. The top command also shows the total number of processes, the system load average, the uptime, and the CPU usage by user, system, and idle. The top command can be customized by using various options and interactive commands to change the display, sort the processes, filter the output, and kill processes.

The other commands are incorrect because:

- \* B. vmstat is a Linux command that displays information about the virtual memory, CPU, disk, and system activity. It does not show information about individual processes or core utilization.
- \* C. ctop is a Check Point command that displays information about the firewall kernel activity, such as the number of connections, packets, drops, and rejects. It does not show information about other processes or memory usage.
- \* D. mpstat is a Linux command that displays information about the CPU utilization by each processor or core. It does not show information about processes or memory usage.

References:

- \* top(1) - Linux manual page
- \* vmstat(8) - Linux manual page
- \* ctop - Check Point Software
- \* mpstat(1) - Linux manual page

### NEW QUESTION # 110

You receive complaints that Guest Users cannot login and use the Guest Network which is configured with Access Role of Guest Users. You need to verify the Captive Portal configuration. Where can you find the config file?

- A. on the management at `SNACPORTAL_HOME/conf/httpd_nac.conf`
- B. on the gateway at `$CPNAC_HOME/conf/httpd_nac.conf`
- C. on the management at `SCPNAC_HOME/conf/httpd_nac.conf`
- D. on the gateway at `$NACPORTAL_HOME/conf/httpd_nac.conf`

**Answer: D**

### NEW QUESTION # 111

You need to run a kernel debug over a longer period of time as the problem occurs only once or twice a week. Therefore, you need to add a timestamp to the kernel debug and write the output to a file but you can't afford to fill up all the remaining disk space and you only have 10 GB free for saving the debugs. What is the correct syntax for this?

- Answer: C**
