- B. Lookup values are retrieved from a back-end database at runtime.
- C. Lookup values must include two or more domains associated with the corresponding SaaS applications.
- D. A custom OIC XPath function is used to retrieve data from Lookups in the data mapper.

Answer: D

Explanation:

- * Option C: False-no mandatory domain count; lookups can map single or multiple domains as needed.
- * Option D: True-the lookupValue XPath function retrieves data from lookups within the mapper, a standard feature.

D reflects OIC's design for efficient data transformation.

NEW QUESTION # 74

There are use cases in which you need to perform an advanced XSL task that you cannot perform in Oracle Integration Cloud (OIC) data mapper. To perform advanced mapping tasks, you decide to use an external XSL mapper and then import the .xml back to your integration.

Which is NOT a valid consideration when handling this use case?

- A. The exported archive file can include a map file that is largely complete in content or a map file that is empty of content.
- B. You must export the entire integration that contains one or more .xml files.
- C. The exported archive must be imported into an Oracle Service Bus project in JDeveloper.
