

Latest 1Z0-1151-25 Exam Registration, 1Z0-1151-25 Latest Study Plan

BONUS!!! Download part of 2Pass4sure 1Z0-1151-25 dumps for free: https://drive.google.com/open?id=1_ImXaTxISPaxHQ3KA8IboFzZHKrPfpuw

Our 1Z0-1151-25 learning questions engage our working staff in understanding customers' diverse and evolving expectations and incorporate that understanding into our strategies, thus you can 100% trust our 1Z0-1151-25 exam engine. And our professional 1Z0-1151-25 Study Materials determine the high pass rate. According to the research statistics, we can confidently tell that 99% candidates after using our products have passed the 1Z0-1151-25 exam.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.
Topic 2	<ul style="list-style-type: none">Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.
Topic 3	<ul style="list-style-type: none">Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.
Topic 4	<ul style="list-style-type: none">Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.

Topic 5	<ul style="list-style-type: none"> • Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.

Oracle - Professional 1Z0-1151-25 - Latest Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Exam Registration

Owing to our high-quality 1Z0-1151-25 real dump and high passing rate, our company has been developing faster and faster and gain good reputation in the world. Our education experts are adept at designing and researching exam questions and answers of 1Z0-1151-25 study materials. What's more, we can always get latest information resource. Our high passing rate is the leading position in this field. We are the best choice for candidates who are eager to Pass 1Z0-1151-25 Exam and acquire the certification.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q56-Q61):

NEW QUESTION # 56

What is the purpose of a Network Security Group (NSG) in OCI?

- A. To act as a central point for managing internet access for all subnets in a VCN.
- B. To provide DNS resolution services for instances within a VCN.
- C. To define routing policies for subnets within a VCN.
- **D. To provide a virtual firewall at the VNIC level, allowing for granular security policies based on source and destination NSGs.**

Answer: D

Explanation:

Here's a breakdown of Network Security Groups (NSGs) in OCI:

Virtual Firewall at the VNIC Level: NSGs act as virtual firewalls that control traffic at the Virtual Network Interface Card (VNIC) level. This means you can apply security rules to individual instances or groups of instances by associating them with NSGs.

Granular Security Policies: NSGs allow you to define granular security policies based on:

Source and Destination IP addresses or CIDR blocks: You can specify which IP addresses or CIDR blocks are allowed to send or receive traffic.

Source and Destination Ports: You can specify which TCP or UDP ports are allowed.

Protocols: You can specify which protocols (e.g., TCP, UDP, ICMP) are allowed.

Source and Destination NSGs: This is a key feature. You can create rules that allow traffic between specific NSGs, creating micro-segmentation within your VCN.

Why other options are incorrect:

A). To define routing policies for subnets within a VCN: Routing policies are defined by Route Tables, not NSGs.

B). To act as a central point for managing internet access for all subnets in a VCN: Internet access is managed by an Internet Gateway and associated Route Tables, not NSGs. While NSGs can control traffic entering and leaving a subnet via the Internet Gateway, that is not their primary function.

D). To provide DNS resolution services for instances within a VCN: DNS resolution is provided by a DNS Resolver within the VCN, not NSGs.

NEW QUESTION # 57

What is the main requirement for subscribing to Oracle Database@Azure?

- A. Private interconnect between OCI and Azure
- B. Custom Identity domain
- **C. An existing Azure subscription**

- D. Linked Azure and Oracle Cloud Infrastructure account

Answer: C

Explanation:

Oracle Database@Azure is offered within the Azure environment. 1 Therefore, having an active Azure subscription is a fundamental requirement to deploy and use this service. You're essentially deploying Oracle resources within your Azure tenancy Here's why the other options are not prerequisites:

- B). Custom Identity domain: While identity management is important, a custom identity domain is not a strict prerequisite. Standard Azure identity mechanisms can be used.
- C). Linked Azure and Oracle Cloud Infrastructure account: While the underlying technology involves connectivity between OCI and Azure, you don't need to explicitly link separate OCI and Azure accounts as a prerequisite. The integration is handled behind the scenes by Microsoft and Oracle.
- D). Private interconnect between OCI and Azure: The Oracle Database@Azure service itself uses a private interconnect behind the scenes, but you, as the customer, don't need to set up a separate private interconnect as a prerequisite to subscribing to the service. The interconnect is part of the offering.

NEW QUESTION # 58

What BGP IP addresses are necessary when configuring the Oracle virtual circuit in Oracle Interconnect for Azure?

- A. Both a primary and secondary pair of BGP addresses are required.
- B. Only a secondary pair of BGP addresses is required.
- C. BGP addresses are not required for setting up the Oracle virtual circuit.
- D. Only a primary pair of BGP addresses is required.

Answer: A

Explanation:

When setting up Oracle Interconnect for Azure, you need both a primary and a secondary pair of BGP (Border Gateway Protocol) IP addresses. These addresses are used to establish BGP peering between the Oracle Cloud Infrastructure (OCI) edge routers and the Azure edge routers.

Here's why both are necessary:

Redundancy and High Availability: The primary and secondary pairs provide redundancy. If the primary connection or its associated BGP session fails, the secondary connection takes over, ensuring continuous connectivity. This is a crucial aspect of a production-grade interconnect.

Why the other options are incorrect:

- a). Only a secondary pair of BGP addresses is required: A secondary pair alone would not establish the initial connection. You need a primary pair to start the BGP peering.
- b). BGP addresses are not required for setting up the Oracle virtual circuit: BGP is essential for dynamic routing and failover in the interconnect. Without BGP, the interconnect would not function as intended.
- d). Only a primary pair of BGP addresses is required: While a primary pair can establish an initial connection, it doesn't provide the necessary redundancy for high availability.

NEW QUESTION # 59

What does the term "multicloud" mean and how can it help organizations manage their IT infrastructure?

- A. The deployment of a single cloud service across multiple regions and data centers for better performance
- B. The use of cloud services from multiple providers to leverage the best features and services of each
- C. The use of multiple cloud services from a single provider for redundancy and high availability
- D. The integration of on-premises infrastructure with cloud services for a hybrid cloud approach

Answer: B

Explanation:

"Multicloud" refers to using services from multiple cloud providers (e.g., OCI, Azure, GCP) to leverage their unique strengths, enhancing flexibility, resilience, and cost-efficiency. Option A describes hybrid cloud, Option C is single-provider redundancy, and Option D is multi-region deployment-not multicloud. Oracle's multicloud strategy documentation defines this approach as a key IT management enabler.

NEW QUESTION # 60

What is the purpose of Oracle Interconnect for Google Cloud?

- A. Migrating on-premises workloads to Oracle Cloud
- B. Hosting Oracle Database on-premises
- C. Managing hybrid cloud deployments involving Oracle Cloud and Azure
- **D. Establishing a secure, low-latency connection between OCI and GCP**

Answer: D

Explanation:

Oracle Interconnect for Google Cloud is specifically designed to create a direct, high-bandwidth, low-latency connection between Oracle Cloud Infrastructure (OCI) and Google Cloud Platform (GCP). This interconnect allows customers to run workloads that span both clouds, taking advantage of the best services from each provider.

Here's why the other options are incorrect:

- b). Migrating on-premises workloads to Oracle Cloud: While OCI offers services for migrating on-premises workloads, Oracle Interconnect for Google Cloud is not directly related to this process. It's about connecting two existing cloud environments.
- c). Hosting Oracle Database on-premises: Oracle Interconnect for Google Cloud is about connecting OCI and GCP, both public cloud environments. It has nothing to do with on-premises deployments.
- d). Managing hybrid cloud deployments involving Oracle Cloud and Azure: Oracle Interconnect for Google Cloud is specifically for connecting OCI and GCP. For connecting OCI and Azure, there's a separate offering called Oracle Interconnect for Microsoft Azure.

NEW QUESTION # 61

.....

Our Oracle Cloud Infrastructure 2025 Multicloud Architect Professional (1Z0-1151-25) practice exam highlights mistakes at the end of each attempt, allowing you to overcome them before it's too late. This kind of approach is great for complete and flawless Oracle Cloud Infrastructure 2025 Multicloud Architect Professional (1Z0-1151-25) test preparation. A free demo version is also available for satisfaction. This 1Z0-1151-25 software provides a real Oracle Cloud Infrastructure 2025 Multicloud Architect Professional (1Z0-1151-25) exam environment to help ease exam anxiety.
