Latest 1Z0-1151-25 Test Questions, 1Z0-1151-25 Most Reliable Questions
Cease to struggle and you cease to live. Only by continuous learning can we not be surpassed by others. Many people do not like to study and think that learning is a very vexing thing. This kind of cognition makes their careers stagnate. 1Z0-1151-25 test question will change your perception. 1Z0-1151-25 learning dumps aim to help students learn easily and effectively that has been developed over many years by many industry experts. For the online version, unlike other materials that limit one person online, 1Z0-1151-25 learning dumps does not limit the number of concurrent users and the number of online users. You can practice anytime, anywhere, practice repeatedly, practice with others, and even purchase together with others1Z0-1151-25 learning dumps make every effort to help you save money and effort, so that you can pass the exam with the least cost.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.
Topic 2	• Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.
Topic 3	• Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.

Topic 4	• Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.
Topic 5	• Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.

1Z0-1151-25 Most Reliable Questions - 1Z0-1151-25 Reliable Exam Blueprint

Our company is thoroughly grounded in our values. They begin with a prized personal and organizational quality--Integrity--and end with a shared concern for the candidates who are preparing for the 1Z0-1151-25 exam. Our values include Innovation, Teamwork, Customer Focus, and Respect for Customers. These values guide every decision we make, everywhere we make them. As you can sense by now, and we really hope that you can be the next beneficiary of our 1Z0-1151-25 Training Materials.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q30-Q35):

NEW QUESTION # 30
How is Oracle Database@Google Cloud connected to the broader Oracle Cloud Infrastructure (OCI)?

- A. Through a public Internet connection with robust security measures
- B. Using Google Cloud's internal network infrastructure for seamless communication
- C. By leveraging a shared virtual private network (VPN) connection
- D. Via a dedicated and redundant dark fiber network managed by Oracle

Answer: D

Explanation:
Oracle Database@Google Cloud connects to OCI via a dedicated, redundant dark fiber network managed by Oracle, ensuring low-latency and high-reliability communication. VPN (Option A) and public internet (Option C) are less performant, and GCP's internal network (Option D) isn't the primary link-Oracle manages the interconnect. This is detailed in Oracle's multicloud architecture docs.

NEW QUESTION # 31
What is the purpose of federating the Azure tenant's Microsoft Entra ID with an OCI identity domain?

- A. To enable bi-directional communication between Azure and OCI
- B. To specify an Azure Virtual Network (VNet) in Azure during provisioning
- C. To specify an Azure Virtual Network (VNet) in Azure during provisioning
- D. To allow Azure users to log in to the OCI Console using the same Azure credentials used for Azure

Answer: D

NEW QUESTION # 32
Which of the following is not a primary driver for using multiple clouds?

- A. Content Delivery Network
- B. Cost Optimization

- C. Redundancy/Disaster Recovery
- D. Best of Breed Cloud Services

Answer: A

Explanation:
While a CDN can be part of a multi-cloud strategy, it's not a primary driver for adopting one. Here's why:
CDNs are about content delivery: Their main function is to cache and deliver content (like images, videos, and web pages) to users from geographically distributed servers, improving performance and reducing latency.
CDNs can be used independently of multi-cloud: You can use a CDN with a single cloud provider or even with on-premises infrastructure.
Here's why the other options are primary drivers:
Cost Optimization: Different cloud providers have different pricing models and strengths. Multi-cloud allows you to choose the most cost-effective option for each workload.
Best of Breed Cloud Services: Each cloud provider has its own unique strengths and specialized services. Multi-cloud lets you leverage the best services from each provider.
Redundancy/Disaster Recovery: Using multiple clouds provides redundancy and reduces the risk of a single point of failure.
If one cloud experiences an outage, you can failover to another.

NEW QUESTION # 33
which of the following best describes the location of the Exadata compute and storage infrastructure?

- A. In an OCI pod physically located within the Google Cloud data center, that also contains its own network fabric.
- B. As an extension of the customer's on-premises Exadata infrastructure, connected via a private link.
- C. In a dedicated OCI region that is physically co-located within the Google Cloud data center.
- D. Within Google Cloud's virtual private cloud (VPC) as a managed service.

Answer: A

Explanation:
This accurately describes the physical deployment model. Oracle places a dedicated "OCI pod" within the Google Cloud data center. This pod contains the Exadata hardware (compute and storage servers) and its own dedicated network fabric for internal communication within the Exadata system. This pod is managed by Oracle, even though it resides in a Google Cloud facility.
The other options are incorrect:
The Exadata infrastructure is not within the Google Cloud VPC. It's in its own isolated environment (the OCI pod).
While the pod is in a Google Cloud data center, it's not a full OCI region. It's a smaller, dedicated deployment.
It's not an extension of the customer's on-premises infrastructure.
It's a fully managed cloud service provided by Oracle.

NEW QUESTION # 34
Which workload type is NOT optimized for Oracle Autonomous Database on Shared Exadata Infrastructure?

- A. Transaction processing
- B. Mixed workloads
- C. High-performance computing
- D. Data warehousing

Answer: C

Explanation:
Oracle Autonomous Database on Shared Exadata Infrastructure is optimized for data warehousing (Option A), mixed workloads (Option B), and transaction processing (Option D), leveraging Exadata's performance and automation. High-performance computing (HPC, Option C), typically involving compute-intensive tasks like simulations, is not a primary focus-OCI offers separate HPC solutions. Oracle's documentation confirms these workload optimizations.

NEW QUESTION # 35
