1 / 8

All our team of experts and service staff are waiting for your mail on the 2V0-16.25 exam questions all the time. As long as you encounter obstacles in the learning process on our 2V0-16.25 training guide, send us an email and we will solve it for you at the first time. Please believe that 2V0-16.25 Learning Materials will be your strongest backing from the time you buy our 2V0-16.25 practice braindumps to the day you pass the exam.

Dumpleader has made the VMware 2V0-16.25 exam dumps after consulting with professionals and getting positive feedback from customers. The team of Dumpleader has worked hard in making this product a successful 2V0-16.25 study material. So we guarantee that you will not face issues anymore in passing the 2V0-16.25 Certification test with good grades. Dumpleader has built customizable 2V0-16.25 practice exams (desktop software & web-based) for our customers.

## 2V0-16.25 Study Tool Will Be Valuable Investment with Reasonable Prices - Dumpleader

It is not hard to find that there are many different kinds of products in the education market now. It may be difficult for users to determine the best way to fit in the complex choices. We can tell you with confidence that the 2V0-16.25 study materials are superior in all respects to similar products. First, users can have a free trial of 2V0-16.25 Learning Materials, to help users better

understand the 2V0-16.25 study materials. If the user discovers that the product is not appropriate for him, the user can choose another type of learning material.

## VMware 2V0-16.25 Exam Syllabus Topics:

| Topic   | Details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 1 | <ul style="list-style-type: none"><li>• Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Topic 2 | <ul style="list-style-type: none"><li>• VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.</li></ul>                                                                                                                                                              |
| Topic 3 | <ul style="list-style-type: none"><li>• IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Topic 4 | <ul style="list-style-type: none"><li>• Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.</li></ul> |
| Topic 5 | <ul style="list-style-type: none"><li>• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## VMware vSphere Foundation 9.0 Administrator Sample Questions (Q29-Q34):

### NEW QUESTION # 29

What are two roles of VMware Tools within a virtual machine (VM)? (Choose two.)

- A. Provides journaling of file system metadata changes for fast recovery.
- B. Stores the virtual machine configuration files.
- C. Provides Guest OS heartbeat service.
- D. Provides device drivers for the VM.
- E. Manages the virtual machine hardware configuration.

**Answer: C,D**

Explanation:

VMware Tools is a suite of services and drivers installed in a VM. It provides:

- \* Guest OS heartbeat service (B): Used by vCenter to monitor VM health.
- \* Device drivers (C): Optimized drivers for network, storage, graphics, and mouse/keyboard integration.

Other options:

- \* A. Journaling of file system metadata# Provided by the guest OS filesystem, not VMware Tools.
- \* D. Stores VM configuration files# Handled by vCenter/ESXi, not VMware Tools.
- \* E. Manages VM hardware configuration# Done via vSphere Client, not VMware Tools.

References:

VMware vSphere 9.0 - VMware Tools Overview

VMware Docs: Functions of VMware Tools

### NEW QUESTION # 30

An administrator has been tasked to create a virtual machine (VM) into a VMware vCenter Supervisor Namespace in an existing VMware vSphere Foundation (VVF) deployment.

How would the administrator create the VM?

- **A. Create a YAML file and deploy using kubectl.**
- B. Use VCF CLI to deploy the VM.
- C. Deploy using the vSphere Client.
- D. Log in to VCF Automation Service Broker and select the "Create a VM" catalog item.

**Answer: A**

Explanation:

In a VMware vSphere Foundation (VVF) deployment with vCenter Supervisor Namespaces enabled, the method for creating VMs inside a Supervisor Namespace relies on the vSphere VM Service.

\* The VM Service exposes VMs as Kubernetes-native objects that are managed using kubectl.

\* Administrators (or DevOps engineers with appropriate permissions) must write a VM YAML manifest file, which specifies parameters such as apiVersion, kind: VirtualMachine, spec.imageName, spec.className, spec.storageClass, and spec.networkInterfaces.

\* The YAML manifest is then applied with kubectl to the Supervisor context.

This approach is documented as the supported method:

"As a DevOps engineer, provision a VM and its guest OS in a declarative manner by writing VM deployment specifications in a Kubernetes YAML file." Why the other options are incorrect:

\* B. Deploy using the vSphere Client## The vSphere Client is used to configure Namespaces, permissions, and VM classes, but actual VM creation in Supervisor Namespaces is done via kubectl + YAML.

\* C. Use VCF CLI to deploy the VM## VCF CLI (kubectl vsphere login) is used only to authenticate and obtain context, not to create VMs.

\* D. Log in to VCF Automation Service Broker## This is used for vRealize Automation/Aria Automation integration, not for direct Supervisor Namespace VM creation.

### NEW QUESTION # 31

In VMware Cloud Foundation (VCF) Operations for Logs, where does an administrator visualize the value range of a field?

- A. Click the pencil in the Manage Fields pane.
- B. Click on the field in the Field Table.
- C. Click on the field in Manage Fields.
- **D. Click on the field in the Events table.**

**Answer: D**

Explanation:

In VCF Operations for Logs, administrators can analyze logs using queries, fields, and charts. A key feature is the ability to view the value range of a specific field.

\* When a log query is executed, results appear in the Events table.

\* Each field shown in the Events table is interactive.  
\* By clicking on a field in the Events table, administrators can drill down into the data to visualize its value distribution (range), typically in the form of a histogram or grouped data set.  
This provides insight into what values are present and how frequently they occur, which is useful for troubleshooting, anomaly detection, and refining queries.

Why not the other options?

- \* A. Click the pencil in the Manage Fields pane# Used to edit or extract fields, not visualize ranges.
- \* C. Click on the field in Manage Fields# Displays field definitions and settings, not real-time value ranges.
- \* D. Click on the field in the Field Table# The Field Table lists defined fields but does not provide value range visualization.

References:

VMware Cloud Foundation 9.0.3 - Smart fields and field value histogram from Events table VMware Cloud Foundation 9.0.3 - Analyze logs, queries, and fields in the Events table

### NEW QUESTION # 32

An administrator is tasked to configure VMware Cloud Foundation (VCF) Operations alerts to notify only relevant stakeholders when alerts trigger.

Which configuration step will satisfy the requirement?

- A. Configure notification for only critical alerts.
- **B. Configure notification to specific alert recipients.**
- C. Configure notification to write a file to an output folder.
- D. Configure notification to use generic contact information.

**Answer: B**

Explanation:

In VCF Operations, alerts can be configured with notification settings. To ensure only relevant stakeholders receive alerts:

- \* You assign specific recipients to notifications.
- \* This avoids alert fatigue and ensures teams only see alerts they are responsible for.

Other options:

- \* A. Write to file# Not for stakeholder notifications.
- \* B. Only critical alerts# Reduces volume, but still not targeted to relevant recipients.
- \* D. Generic contact info# Sends to broad groups, not selective.

References:

VMware Cloud Foundation 9.0 - Alerting and Notification Settings

VMware Docs: Configuring Notifications in vRealize Operations

### NEW QUESTION # 33

Which rule in a virtual machine (VM) storage policy is configured to ensure data redundancy in a VMware vSAN environment?

- A. Stripe Width
- B. Flash Read Cache Reservation
- C. Disk Stripes Per Object
- **D. Failures to Tolerate**

**Answer: D**

Explanation:

The VM Storage Policy rule that controls data redundancy in vSAN is Failures to Tolerate (FTT).

- \* Defines the number of hardware failures (host, disk, network) that vSAN can tolerate while maintaining data availability.
- \* Configurations include RAID-1 (mirroring), RAID-5/6 (erasure coding).

Other options:

- \* B. Disk Stripes Per Object# Defines performance striping, not redundancy.
- \* C. Stripe Width# Same as above, not redundancy.
- \* D. Flash Read Cache Reservation# Relates to caching performance, not redundancy.
