Pass Guaranteed VMware - 3V0-42.23 - Latest Latest VMware NSX 4.x Advanced Design Study Guide

Our excellent VMware 3V0-42.23 practice materials beckon exam candidates around the world with their attractive characters. Our experts made significant contribution to their excellence. So we can say bluntly that our 3V0-42.23 Actual Exam is the best. Our effort in building the content of our 3V0-42.23 study dumps lead to the development of 3V0-42.23 learning guide and strengthen their perfection.

VMware NSX 4.x Advanced Design Sample Questions (Q145-Q150):

NEW QUESTION # 145

NSX single-tier routing architecture is best suited for which scenario?

- A. Networks needing advanced firewalling between segments
- B. Large-scale deployments with complex routing requirements
- C. Smaller environments or applications with simple routing needs
- D. Situations requiring extensive physical to virtual network integration

Answer: C

NEW QUESTION # 146

What is the function of the control plane in NSX?

- A. It configures the data plane within the NSX environment.
- B. It handles access control within the NSX environment.
- C. It forwards traffic in the NSX environment.
- D. It provides the NSX APIs for automation and integration.

Answer: A

Explanation:

1. NSX Control Plane Responsibilities

- * The control plane is responsible for programming and distributing network configurations to the data plane.
- * It ensures that forwarding decisions are precomputed and pushed to transport nodes (ESXi/KVM hosts).
- * It does not forward traffic itself but instructs the data plane on how to do so.

2. Why "Configures the Data Plane" is the Correct Answer (B)

- * NSX Control Plane manages configuration and route distribution.
- * Uses Central Control Plane (CCP) to compute forwarding decisions.
- * Uses Local Control Plane (LCP) to communicate with Transport Nodes.

3. Why Other Options are Incorrect

- * (A - Provides APIs):
- * NSX APIs belong to the management plane, not the control plane.
- * (C - Handles Access Control):
- * Security policies are enforced in the data plane, not the control plane.
- * (D - Forwards Traffic):
- * The data plane is responsible for forwarding packets, not the control plane.

4. NSX Control Plane Design Considerations

- * Ensure NSX Managers (which include the control plane) are deployed in a 3-node cluster for high availability.
- * BGP and OSPF routes should be dynamically distributed to transport nodes via the control plane.
- * Monitor NSX Manager performance to ensure routing convergence times are optimal.

VMware NSX 4.x Reference:

- * NSX-T Control Plane Architecture and Best Practices
- * NSX-T Routing and Forwarding Table Optimization

NEW QUESTION # 147

EVPN design considerations in NSX primarily involve:

- A. Designing custom network protocols
- B. Ensuring scalability and flexibility in VXLAN networks
- C. Avoiding the use of virtual machines
- D. Selecting the right cable colors for network hardware

Answer: B

NEW QUESTION # 148

Why are L2 bridging services used in NSX Edge designs?

- A. To ensure that all traffic passes through a single choke point for monitoring
- B. To replace the need for physical routers entirely
- C. To connect virtual and physical workloads without changing the IP scheme
- D. To simplify firewall rules by bypassing them

Answer: C

NEW QUESTION # 149

What does gateway high availability in NSX focus on?

- A. Ensuring continuous traffic flow during failures
- B. Enhancing the physical security of network devices
- C. Simplifying network management tasks

- D. Reducing the cost of network infrastructure

Answer: A
