Nokia Data Center Fabric Fundamentals Exam Sample Questions (Q16-Q21):

NEW QUESTION # 16

Which of the following statements about Zero Touch Provisioning (ZTP) is FALSE?

- A. The ZTP process relies on a DHCP server for an IP address.
- **B. The ZTP process downloads a provisioning script defined in the TLS profile.**
- C. ZTP allows a router to become operational in the network without any pre-provisioning.
- D. The ZTP process is managed by the ZTP application in Nokia SR Linux.

Answer: B

Explanation:

The ZTP process downloads a provisioning script typically from a defined URL or server, not from a TLS profile. The TLS profile is used for securing communications but does not define the provisioning script location.

NEW QUESTION # 17

Which of the following is NOT one of the reasons why BGP is used as the routing protocol in the data center?

- A. It supports both IPv4 and IPv6.
- B. It is a well understood and mature routing protocol.
- C. BGP neighbors automatically discover each other.
- **D. It is more efficient than link-state protocols like IS-IS and OSPF.**

Answer: D

Explanation:

BGP is not chosen because it is more efficient than link-state protocols; in fact, link-state protocols like IS-IS and OSPF generally provide faster convergence and more efficient route calculation. BGP is used in data centers mainly because it is mature, well understood, supports both IPv4 and IPv6, and offers flexible policy control.

- B. Use the digital sandbox to test and validate configuration changes and upgrades.
- **C. Use a fabric intent to build and validate design templates.**
- D. Monitor the data center fabric using model-driven telemetry.

and design, not part of Day 2+ operational tasks like monitoring, health analysis, or change validation.

- D. It uses a digital sandbox to connect workloads to the DC fabric.
