## Latest AAISM Exam Bootcamp - Realistic Test ISACA Advanced in AI Security Management (AAISM) Exam Objectives Pdf Pass Guaranteed

We promise during the process of installment and payment of our AAISM prep torrent, the security of your computer or cellphone can be guaranteed, which means that you will be not afraid of virus intrusion and personal information leakage. Besides we have the right to protect your email address and not release your details to the 3rd parties.

## ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q28-Q33):

### NEW QUESTION # 28

After implementing a third-party generative AI tool, an organization learns about new regulations related to how organizations use

AI. Which of the following would be the BEST justification for the organization to decide not to comply?

- A. The risk is within the organization's risk appetite
- B. The cost of noncompliance was not determined
- C. The AI tool is widely used within the industry
- D. The AI tool is regularly audited

**Answer: A**

Explanation:

The AAISM framework clarifies that compliance decisions must always be tied to an organization's risk appetite and tolerance. When new regulations emerge, management may choose not to comply if the associated risk remains within the documented and approved risk appetite, provided that accountability is established and governance structures support this decision. Other options such as widespread industry use, third-party audits, or lack of cost assessment do not justify noncompliance under the governance principles.

The risk appetite framework is the only recognized justification under AI governance principles.

### NEW QUESTION # 29

An organization decides to contract a vendor to implement a new set of AI libraries. Which of the following is MOST important to address in the master service agreement to protect data used during the AI training process?

- A. Continuous data monitoring
- B. Independent certification
- C. Data pseudonymization
- D. Right to audit

**Answer: D**

Explanation:

AAISM emphasizes that the right to audit is the most critical contractual safeguard when outsourcing AI services. This allows the contracting organization to independently verify that the vendor is applying appropriate protections to training data, meeting compliance obligations, and upholding privacy requirements.

Pseudonymization is a technical method, monitoring is operational, and certifications provide external assurance, but none give the direct, enforceable oversight that audit rights provide. In vendor contracts, the right to audit is the primary safeguard for data protection and governance.

### NEW QUESTION # 30

Which of the following technologies can be used to manage deepfake risk?

- A. Systematic data tagging
- B. Blockchain
- C. Multi-factor authentication (MFA)
- D. Adaptive authentication

**Answer: B**

Explanation:

The AAISM study material highlights blockchain as a control mechanism for managing deepfake risk because it provides immutable verification of digital media provenance. By anchoring original data signatures on a blockchain, organizations can verify authenticity and detect tampered or synthetic content. Data tagging helps organize but does not guarantee authenticity. MFA and adaptive authentication strengthen identity security but do not address content manipulation risks. Blockchain's immutability and traceability make it the recognized technology for mitigating deepfake challenges.

### NEW QUESTION # 31

Which of the following AI-driven systems should have the MOST stringent recovery time objective (RTO)?

- A. Industrial control system
- B. Car navigation system
- C. Credit risk modeling system
- D. Health support system

**Answer: A**

Explanation:

AAISM risk guidance notes that the most stringent recovery objectives apply to industrial control systems, as downtime can directly disrupt critical infrastructure, manufacturing, or safety operations. Health support systems also require high availability, but industrial control often underpins safety-critical and real-time environments where delays can result in catastrophic outcomes. Credit risk models and navigation systems are important but less critical in terms of immediate physical and operational impact. Thus, industrial control systems require the tightest RTO.

### NEW QUESTION # 32

To ensure AI tools do not jeopardize ethical principles, it is MOST important to validate that:

- A. The organization has implemented a responsible development policy
- B. Stakeholders have approved alignment with company values
- C. Outputs of AI tools do not perpetuate adverse biases
- D. AI tools are evaluated by the privacy department before implementation

**Answer: C**

Explanation:

AAISM highlights that the core ethical risk in AI is the perpetuation of bias that results in unfair or discriminatory outcomes. Therefore, the most important validation step is ensuring that outputs of AI systems are free from adverse biases. A responsible development policy, stakeholder approvals, and privacy reviews all contribute to governance, but they do not directly ensure ethical outcomes. Validation of output fairness is the critical safeguard for ensuring AI does not violate ethical principles.
