NEW QUESTION # 45

A client wants to calculate tax differently when an order is billed for a range of particular postcodes. They want to implement their own system instead of using a third-party system. The Developer is asked to assist in this task by creating a conditional webhook. What must be done to achieve this?

- A. Create an after plugin on the webhook class and check for a list of postcodes at the time of processing and return true for certain postcodes.
- B. Create a `webhooks.xml` file and add the rules wanted in the form of a rule node element using the regex operator to catch a range of postcodes.
- C. Implement a new webhook with a list of postcodes and link it to the original webhook, then advise the client to monitor for the new webhook instead.

Answer: B

Explanation:

Webhooks in Adobe Commerce can be customized using `webhooks.xml`, where rules can be defined with conditions, including regex-based filtering. This allows the developer to configure postcodes that trigger specific webhook behavior.

A is not correct: modifying core webhook logic via plugin is not the recommended approach.

C is incorrect: duplicating webhooks is unnecessary when rules can be defined declaratively.

B is correct: `webhooks.xml` with rule conditions provides the proper solution.
