Salesforce Certified Advanced Administrator Sample Questions (Q212-Q217):

NEW QUESTION # 212

An Administrator has uploaded a change set from a sandbox to a production organization and would like to add a missing component to the change set before deployment. What options does the administrator have to modify the change set? Choose 2 answers

- **A. Create a new change set in the sandbox environment, add all the required components and upload it to production**
- B. Edit the change set in sandbox environment and upload it to production
- **C. Clone the change set in sandbox environment, Add all required component and upload it to production**
- D. Edit the change set in production, add the component and use the redeploy option

Answer: A,C

NEW QUESTION # 213

A custom object called Item has a many-to-many relationship with the Account and Quota objects. At Cloud Kicks, account owners are changed frequently while ownership of Quota records remains unchanged. When an account owner is updated, the new account owner can only see Item records if they are also the owner of the Quota record.

What step should the administrator take to give access to all Item records?

Change the data format of the Quota relationship field from master-detail to lookup.

- A. Give the account owner Read access to both the Account and the Quota objects
- B. Create a Quota criteria-based sharing rule using ISCHANGED for the Account Owner field.
- C. Account master-detail to secondary.
- **D. Re-assign the Quota master-detail to the primary and the**

Answer: D

NEW QUESTION # 214

A user is getting an error when attempting to merge two accounts. The administrator checks the profile to see the user has Read/Write permission on Accounts and is the owner of both records.

What is preventing the user from completing the merge?

- A. The Account matching rules are not set.
- B. Only administrators have permission to merge records.
- C. The user is assigned to the wrong territory.
- **D. The Delete permission is missing on the user for Accounts.**

Answer: D

Explanation:

Explanation

The Delete permission is missing on the user for Accounts is what is preventing the user from completing the merge. Merging accounts is a way to combine up to three duplicate accounts into one master record and update the related records accordingly. Merging accounts requires the Delete permission on accounts because merging accounts involves deleting the duplicate records and keeping only the master record.

NEW QUESTION # 215

Users at AW Computing are receiving a duplicate message when they enter contacts with common first and last names.

Management wants to improve the user experience but also keep the data Integrity of contacts.

What should an administrator implement for this issue?

- A. Change the duplicate rule to report Instead of alert so the message is avoided.
- B. Update the matching method on the rule from fuzzy to exact for First Name and Last Name.
- C. Add a secondary matching rule to the duplicate rule to match on the associated customer.
- **D. Include the Email field to the existing matching rule for a more exact match.**

Answer: D

Explanation:

A matching rule is a rule that defines how records are compared for duplication based on certain fields or fuzzy logic. By including more fields or changing the matching method, you can make the matching rule more or less strict and reduce false positives or negatives. In this case, including the email field to the existing matching rule for contacts can help avoid duplicate messages for common names by checking if the email addresses are also identical. References: https://help.salesforce.com/s/articleView?id=sf.matching_rules_create.htm&type=5 https://help.salesforce.com/s/articleView?id=sf.matching_rules_considerations.htm&type=5

NEW QUESTION # 216

The administrator at Cloud Kicks created a flow in a sandbox that walks service agents through the Return Merchandise Authorization creation process. The administrator deployed the flow to production with a Change Set. Users are unable to use the flow in production.

Which step should the administrator take?

Activate the flow administrator take?

- A. Deployment the flow, with the Metadata API instead of Change Sets
- **B. Activate the flow manually after deployment.**
- C. Include the active and prior inactive flow version in the Change Set.
- D. Ensure there is an active flow version in the sandbox.

Answer: B

Explanation:

A flow is an automation tool that allows you to create processes that perform actions based on user input or record changes. A flow can be triggered by a user who launches it from a button, link, or Lightning page, or by the system when a record is created or updated. A flow has different versions that can be active or inactive. An active version is the one that runs when the flow is triggered, while an inactive version is the one that is saved but not running. When you deploy a flow to production with a change set, the flow version is deployed as inactive by default. This means that you need to activate the flow manually after deployment if you want it to run in production.
