### NEW QUESTION # 86

You want to configure autohealing for network load balancing for a group of Compute Engine instances that run in multiple zones, using the fewest possible steps. You need to configure re-creation of VMs if they are unresponsive after 3 attempts of 10 seconds each. What should you do?

- A. Create a managed instance group. Verify that the autoscaling setting is on.
- B. Create an HTTP load balancer with a backend configuration that references an existing instance group. Set the health check to healthy (HTTP)
- C. Create an HTTP load balancer with a backend configuration that references an existing instance group. Define a balancing mode and set the maximum RPS to 10.
- D. Create a managed instance group. Set the Autohealing health check to healthy (HTTP)

**Answer: A**

### NEW QUESTION # 87

You have just created a new project which will be used to deploy a globally distributed application. You will use Cloud Spanner for data storage. You want to create a Cloud Spanner instance. You want to perform the first step in preparation of creating the

instance.

What should you do?

- A. Enable the Cloud Spanner API
- B. Grant yourself the IAM role of Cloud Spanner Admin
- **C. Configure your Cloud Spanner instance to be multi-regional**
- D. Create a new VPC network with subnetworks in all desired regions

**Answer: C**

#### NEW QUESTION # 88

You need to manage a Cloud Spanner Instance for best query performance. Your instance in production runs in a single Google Cloud region. You need to improve performance in the shortest amount of time. You want to follow Google best practices for service configuration. What should you do?

- A. Create an alert in Cloud Monitoring to alert when the percentage of high priority CPU utilization reaches 65%.  
If you exceed this threshold, add nodes to your instance
- B. Create an alert in Cloud Monitoring to alert when the percentage of high priority CPU utilization reaches 45%.  
Use database query statistics to identify queries that result in high CPU usage, and then rewrite those queries to optimize their resource usage
- **C. Create an alert in Cloud Monitoring to alert when the percentage of high priority CPU utilization reaches 45%.  
If you exceed this threshold, add nodes to your instance.**
- D. Create an alert in Cloud Monitoring to alert when the percentage of high priority CPU utilization reaches 65%.  
Use database query statistics to identify queries that result in high CPU usage, and then rewrite those queries to optimize their resource usage.

**Answer: C**

#### NEW QUESTION # 89

.....
