Reverse the Exam Anxiety By Getting the Real Amazon AWS-Certified-Developer-Associate Dumps

When you use our AWS-Certified-Developer-Associate learning guide, we hope that you can feel humanistic care while acquiring knowledge. Every staff at our AWS-Certified-Developer-Associate simulating exam stands with you. So if you have any confusion about our AWS-Certified-Developer-Associate exam questions, don't hesitate to ask for our service online or contact with us via email. we will solve your problem by the first time and give you the most professional suggestions. And we always consider your interest and condition to the first place. That's why so many of our customers praised our warm and wonderful services.

The AWS-Developer exam covers a wide range of topics, including AWS core services such as EC2, S3, and RDS, as well as developer tools such as AWS CodeDeploy, AWS CodeCommit, and AWS CodePipeline. It also covers topics such as AWS security, AWS Lambda, and Amazon API Gateway. AWS-Certified-Developer-Associate Exam consists of 65 multiple-choice and multiple-response questions and must be completed within 130 minutes.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q245-Q250):

NEW QUESTION # 245

A Developer is asked to implement a caching layer in front of Amazon RDS. Cached content is expensive to regenerate in case of service failure. Which implementation below would work while maintaining maximum uptime?

- A. Migrate the database to Amazon Redshift.
- **B. Implement Amazon ElastiCache Redis in Cluster Mode**
- C. Implement Amazon ElastiCache Memcached.
- D. Install Redis on an Amazon EC2 instance.

Answer: B

Explanation:

NEW QUESTION # 246

A user has configured ELB. Which of the below mentioned protocols the user can configure for ELB health checks while setting up ELB?

- A. TCP
- B. HTTPS
- **C. All of the options**
- D. SSL

Answer: C

Explanation:

An ELB performs a health check on its instances to ensure that it diverts traffic only to healthy instances. The ELB can perform a health check on HTTP, HTTPS, TCP and SSL protocols.

NEW QUESTION # 247

A developer has built an application running on AWS Lambda using AWS Serverless Application Model (AWS SAM). What is the correct order of execution to successfully deploy the application?

- A. 1 Build the SAM template locally
2. Deploy the SAM template from Amazon S3.
3 Package the SAM template for use
- B. 1 Build the SAM template in Amazon EC2
2 Package the SAM template to Amazon EBS storage
3. Deploy the SAM template from Amazon EBS.
- C. 1 Build the SAM template locally
2 Package the SAM template from AWS CodeCommit.
3 Deploy the SAM template to CodeCommit
- **D. 1 Build the SAM template locally
2 Package the SAM template onto Amazon S3
3. Deploy the SAM template from Amazon S3.**

Answer: D

Explanation:

Reference:

NEW QUESTION # 248

A developer has been asked to create an AWS Lambda function that is invoked any time updates are made to items in an Amazon DynamoDB table. The function has been created and appropriate permissions have been added to the Lambda execution role. Amazon DynamoDB streams have been enabled for the table, but the function is still not being invoked. Which option would enable DynamoDB table updates to invoke the Lambda function?

- A. Map an Amazon Simple Notification Service (Amazon SNS) topic to the DynamoDB streams.
- B. Increase the maximum runtime (timeout) setting of the Lambda function.
- C. Change the StreamViewType parameter value to NEW_AND_OLD_IMAGES for the DynamoDB table.
- **D. Configure event source mapping for the Lambda function.**

Answer: D

Explanation:

This solution allows the Lambda function to be invoked by the DynamoDB stream whenever updates are made to items in the DynamoDB table. Event source mapping is a feature of Lambda that enables a function to be triggered by an event source, such as a DynamoDB stream, an Amazon Kinesis stream, or an Amazon Simple Queue Service (SQS) queue. The developer can configure event source mapping for the Lambda function using the AWS Management Console, the AWS CLI, or the AWS SDKs. Changing the StreamViewType parameter value to NEW_AND_OLD_IMAGES for the DynamoDB table will not affect the invocation of the Lambda function, but only change the information that is written to the stream record.

Mapping an Amazon Simple Notification Service (Amazon SNS) topic to the DynamoDB stream will not invoke the Lambda function directly, but require an additional subscription from the Lambda function to the SNS topic. Increasing the maximum runtime (timeout) setting of the Lambda function will not affect the invocation of the Lambda function, but only change how long the function can run before it is terminated.

NEW QUESTION # 249

An application stops working with the following error: The specified bucket does not exist. Where is the BEST place to start the root cause analysis?

- A. Check the application logs in Amazon CloudWatch Logs for Amazon S3 DeleteBucket errors.
- B. Check AWS X-Ray for Amazon S3 DeleteBucket alarms.
- **C. Check AWS CloudTrail for a DeleteBucket event.**
- D. Check the Elastic Load Balancer logs for DeleteBucket requests.

Answer: C

Explanation:
