Use Microsoft AZ-800 Dumps To Overcome Exam Anxiety

Our AZ-800 training materials make it easier to prepare exam with a variety of high quality functions. We are committed to your achievements, so make sure you try preparation exam at a time to win. Our AZ-800 exam prep is of reasonably great position from highly proficient helpers who have been devoted to their quality over ten years to figure your problems out. Their quality function of our AZ-800 learning quiz is observably clear once you download them.

The Microsoft AZ-800 Exam covers a range of topics, including implementing and managing hybrid identity, managing hybrid compute, implementing and managing hybrid storage solutions, and monitoring and maintaining hybrid environments. Administering Windows Server Hybrid Core Infrastructure certification is ideal for IT professionals who are looking to enhance their skills in managing and maintaining hybrid environments.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q205-Q210):

NEW QUESTION # 205

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are planning the deployment of DNS to a new network.

You have three internal DNS servers as shown in the following table.

Name	Location	IP address	Local DNS zone
Server1	Montreal	10.0.1.10	contoso.local
Server2	Toronto	10.0.2.10	east.contoso.local
Server3	Seattle	10.0.3.10	west.contoso.local

The contoso.local zone contains zone delegations for east.contoso.local and west.contoso.local. All the DNS servers use root hints. You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.

Solution: On Server2, you create a conditional forwarder for west.contoso.local. On Server3, you create a conditional forwarder for east.contoso.local.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION # 206

You need to meet the security requirements for passwords.

Where should you configure the components for Azure AD Password Protection? To answer, drag the appropriate components to the correct locations. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE Each correct selection is worth one point.

Locations	Answer Area
DC1 only	The Azure AD Password Protection DC agent: <input type="text"/> Location <input type="text"/>
All the domain controllers	The Azure AD Password Protection proxy service: <input type="text"/> Location <input type="text"/>
VM1 and VM2	A custom banned password list: <input type="text"/> Location <input type="text"/>
The Azure AD tenant	

Answer:

Explanation:

Locations	Answer Area
DC1 only	The Azure AD Password Protection DC agent: <input checked="" type="text"/> All the domain controllers <input type="text"/>
All the domain controllers	The Azure AD Password Protection proxy service: <input checked="" type="text"/> VM1 and VM2 <input type="text"/>
VM1 and VM2	A custom banned password list: <input checked="" type="text"/> The Azure AD tenant <input type="text"/>
The Azure AD tenant

NEW QUESTION # 207

Your network contains an Active Directory Domain Services (AD DS) domain.

You have a Group Policy Object (GPO) named GPO1 that contains Group Policy preferences.

You plan to link GPO1 to the domain.

You need to ensure that the preference in GPO1 apply only to domain member servers and NOT to domain controllers or client computers. All the other Group Policy settings in GPO1 must apply to all the computers.

The solution must minimize administrative effort.

Which type of item level targeting should you use?

- A. Security Group
- B. Environment Variable

- C. Domain
- D. Operating System

Answer: D

Explanation:

NEW QUESTION # 208

You have on-premises file servers that run Windows Server as shown in the following table.

Name	Relevant folder
Server1	D:\Folder1, E:\Folder2
Server2	D:\Data

You have the Azure file shares shown in the following table.

Name	Location
share1	East US
share2	East US

You add a Storage Sync Service named Sync1 and an Azure File Sync sync group named Group1. Group1 uses share1 as a cloud endpoint.

You register Server1 and Server2 with Sync1. You add D:\Folder1 from Server1 as a server endpoint in Group1.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can add share2 as a cloud endpoint in Group1.	<input type="radio"/>	<input type="radio"/>
You can add E:\Folder2 from Server1 as a server endpoint in Group1.	<input type="radio"/>	<input type="radio"/>
You can add D:\Data from Server2 as a server endpoint in Group1.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements

Yes **No**

You can add share2 as a cloud endpoint in Group1.

You can add E:\Folder2 from Server1 as a server endpoint in Group1.

You can add D:\Data from Server2 as a server endpoint in Group1.

NEW QUESTION # 209

You have an Azure virtual machine named VM1 that contains the drives shown in the following table.

Letter	Name
C	Operating System
D	Temporary Storage
E	Data Disk

On VM1, you plan to install an app named App1. The data for App1 must be stored on a persistent data disk assigned to drive D. You need assign the data disk to drive D.

What should you do on VM1 first?

- A. Change the drive letter of the Temporary Storage drive to F.
- **B. Stop (deallocate) VM1.**
- C. Move pagefile.sys to the Operating System drive.
- D. Expand the Temporary Storage drive.

Answer: B

NEW QUESTION # 210
