- B. With activation of a general building alarm
- **C. In response to activation of a smoke detector located at the designated elevator lobby**
- D. When elevator Phase I recall fails to initiate

Answer: C

Explanation:

Elevator alternate level recall is a life safety feature designed to prevent passengers from arriving at a smoke- compromised floor. NFPA 72 and elevator codes dictate that this function must activate when smoke is detected at the primary recall level (designated lobby).

NFPA 72 (2022), Section 21.3.3.1:

"When the elevator lobby smoke detector required for the designated recall level is activated, the elevator shall be recalled to an alternate level." This action prevents elevators from opening at a smoke-filled lobby.

NFPA 72 (2022), Section 18.4.1.5:

"The total sound pressure level produced by the fire alarm system, including ambient noise, shall not exceed 105 dBA at the minimum hearing distance from the audible appliance."
