CompTIA 220-1201 Practice Test Software for Desktop

In compliance with syllabus of the exam, our 220-1201 practice materials are determinant factors giving you assurance of smooth

exam. Our 220-1201 practice materials comprise of a number of academic questions for your practice, which are interlinked and helpful for your exam. So, they are specified as one of the most successful 220-1201 practice materials in the line. They can renew your knowledge with high utility with Favorable prices. So, they are reliably rewarding 220-1201 practice materials with high utility value.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q97-Q102):

NEW QUESTION # 97

A technician installs an upgraded wireless access point. The technician then notices the activity light comes on briefly and turns off. The access point continues to exhibit this behavior repeatedly and does not come online. Which of the following is the most likely cause of this issue?

- A. High latency
- B. External interference
- C. Channel conflict
- **D. Port flapping**

Answer: D

Explanation:

Port flapping refers to a network port continuously going up and down, which can prevent the access point from fully coming online. From CompTIA A+ 220-1101 Official Study Guide, Objective 2.4 - Wired and wireless troubleshooting:

"Repeated loss and restoration of network link is called port flapping and may result in network devices, such as access points, not coming online." Verified Source:

* CompTIA A+ Core 1 (220-1101) Official Study Guide, Chapter 2: Network Troubleshooting

* CompTIA Exam Objectives 220-1101, Domain 2.4

NEW QUESTION # 98

Each time a user tries to print, the paper becomes stuck at the last stage of the print job and the user has to pull the paper out of the printer. Which of the following is the most likely cause?

- A. Toner
- B. Tray assembly
- **C. Rollers**
- D. Printhead

Answer: C

Explanation:

If paper gets stuck at the last stage of printing, the rollers responsible for moving the paper through the printer are likely worn out or dirty.

Why Not B (Tray assembly): The tray assembly manages paper loading, not feeding during the print process.

Why Not C (Toner): Toner is unrelated to paper jams.

Why Not D (Printhead): Printheads manage ink/toner distribution, not paper movement.

CompTIA A+ Exam Reference: Core 2 (220-1102), Section 4.6, printer troubleshooting.

NEW QUESTION # 99

A technician is troubleshooting stylus issues on identical, company-provided tablets. Users can purchase their own accessories. Some users have no issues, but others report that their styluses charge intermittently and die frequently. Which of the following is the most likely cause of this issue?

- A. The tablets need to be updated.
- B. The malfunctioning styluses need firmware updates.
- **C. Certain cases are causing charging issues.**
- D. Some of the tablets have manufacturing defects.

Answer: C

Explanation:

The most likely cause is third-party or ill-fitting cases obstructing the contact between the stylus and the tablet charging mechanism. Some cases may not be designed with stylus charging in mind, particularly if users are purchasing their own accessories.

Option B: A software update might fix OS-related issues, but would not typically affect physical charging.

Option C: If some devices had defects, the issue would likely be consistent, not isolated to some users.

Option D: Firmware issues could be a factor but are less likely than physical obstructions when users are using different accessories.

CompTIA A+ Core 1 Exam Objective Reference:

Objective 1.4: Given a scenario, configure settings and use cases for laptops and mobile devices.

NEW QUESTION # 100

A technician is installing a wireless access point and is required to run all cabling and make patch cords if necessary.

INSTRUCTIONS

Part 1

For each cable type, click the (+) to select the appropriate connector and tool.

part 2

An access point was moved and no longer has connectivity. Connect the access point, patch panel, and switch by clicking the (+) to select the appropriate cable end for each corresponding location to create a link.

The link will be visible after making the second selection of each pair.

Cable ends may be used multiple times, and all placeholders will be filled.

Answer:

Explanation:

See the solution below in Explanation.

Explanation:

Check the exhibit diagram for both parts.

A close-up of several cables AI-generated content may be incorrect.

Part 2

A group of different colored rectangular objects AI-generated content may be incorrect.

NEW QUESTION # 101

A systems administrator deploys BitLocker to all devices. However, one of the desktop PCs is not able to encrypt the boot drive. Which of the following should the administrator check?

- A. TPM
- B. RAM
- C. CPU
- D. HDD

Answer: A

Explanation:

BitLocker Drive Encryption in Windows requires a Trusted Platform Module (TPM) to encrypt the boot drive securely. The TPM is a dedicated microcontroller designed to secure hardware through integrated cryptographic keys. It validates system integrity during boot and securely stores the encryption keys. If BitLocker cannot find a TPM or it is disabled in BIOS/UEFI, drive encryption cannot proceed.

BitLocker can function without TPM using a USB startup key, but this compromises some security and is not recommended for managed enterprise environments.
