

# Latest Braindumps 350-701 Book - Reliable 350-701 Cram Materials

P.S. Free 2025 Cisco 350-701 dumps are available on Google Drive shared by Pass4Leader: [https://drive.google.com/open?id=1\\_7jO\\_1qSO4TNUY5trsK20V2WOvE7dPtO](https://drive.google.com/open?id=1_7jO_1qSO4TNUY5trsK20V2WOvE7dPtO)

The customizable mock tests make an image of a real-based Implementing and Operating Cisco Security Core Technologies (350-701) exam which is helpful for you to overcome the pressure of taking the final examination. Customers of Pass4Leader can take multiple Cisco 350-701 practice tests and improve their preparation to achieve the 350-701 Certification. You can even access your previously given tests from the history, which allows you to be careful while giving the mock test next time and prepare for Cisco 350-701 certification in a better way.

Cisco 350-701 exam is a part of the CCNP Security certification and is a requirement for obtaining this certification. The CCNP Security certification is aimed at professionals who have at least three to five years of experience in implementing and operating security solutions. Implementing and Operating Cisco Security Core Technologies certification validates the skills and knowledge of the candidates in securing network infrastructure, securing endpoints, securing cloud environments, and securing network access. The Cisco 350-701 Exam is an important step towards achieving this certification and is a validation of the candidate's understanding of the latest security technologies and solutions.

## Free PDF Quiz 2025 Cisco 350-701: Updated Latest Braindumps Implementing and Operating Cisco Security Core Technologies Book

A full Cisco 350-701 package is required to take each Success in Life. If you want to be successful, you need to prepare well for the Implementing and Operating Cisco Security Core Technologies 350-701 exam. Buying the right Cisco 350-701 Exam Preparation Materials is one way to prepare for it. With the right study tools, you can easily prepare for the Implementing and Operating Cisco Security Core Technologies. Whether you want to study Cisco 350-701 Exam or pass other Implementing and Operating Cisco Security Core Technologies exam, if you want to prepare for Cisco 350-701 exam, you can choose Cisco 350-701 Valid Exam Questions exam.

The Implementing and Operating Cisco Security Core Technologies (350-701 SCOR) exam is a prerequisite for obtaining the Cisco Certified Specialist – Security Core certification. It is also a part of the requirements for the CCNP Security and CCIE Security certificates. This qualifying test measures the candidates' expertise in the implementation and operation of key security technologies, such as endpoint protection & detection, Cloud security, secure network access, network security, content security, visibility, and enforcements.

## Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q14-Q19):

### NEW QUESTION # 14

An organization received a large amount of SPAM messages over a short time period. In order to take action on the messages, it must be determined how harmful the messages are and this needs to happen dynamically. What must be configured to accomplish this?

- A. Configure the Cisco ESA to modify policies based on the traffic seen.
- **B. Configure the Cisco WSA to modify policies based on the traffic seen.**
- C. Configure the Cisco ESA to receive real-time updates from Talos
- D. Configure the Cisco WSA to receive real-time updates from Talos.

**Answer: B**

Explanation:

[https://www.cisco.com/c/en/us/td/docs/security/esa/esa120/user\\_guide/b\\_ESA\\_Admin\\_Guide\\_12\\_0/b\\_ESA\\_Admin\\_Guide\\_chapter\\_01100.html](https://www.cisco.com/c/en/us/td/docs/security/esa/esa120/user_guide/b_ESA_Admin_Guide_12_0/b_ESA_Admin_Guide_chapter_01100.html)

#### NEW QUESTION # 15

What is a characteristic of Cisco ASA Netflow v9 Secure Event Logging?

- **A. It tracks flow-create, flow-teardown, and flow-denied events.**
- B. It tracks the flow continuously and provides updates every 10 seconds.
- C. Its events match all traffic classes in parallel.
- D. It provides stateless IP flow tracking that exports all records of a specific flow.

**Answer: A**

Explanation:

The ASA and ASASM implementations of NetFlow Secure Event Logging (NSEL) provide a stateful, IP flow tracking method that exports only those records that indicate significant events in a flow. The significant events that are tracked include flow-create, flow-teardown, and flow-denied (excluding those flows that are denied by EtherType ACLs). Reference:

<https://www.cisco.com/c/en/us/td/docs/security/asa/asa92/configuration/general/asa-general-cli/monitor-nsel.html> The significant events that are tracked include flow-create, flow-teardown, and flow-denied (excluding those flows that are denied by EtherType ACLs).

The ASA and ASASM implementations of NetFlow Secure Event Logging (NSEL) provide a stateful, IP flow tracking method that exports only those records that indicate significant events in a flow. The significant events that are tracked include flow-create, flow-teardown, and flow-denied (excluding those flows that are denied by EtherType ACLs). Reference:

#### NEW QUESTION # 16

Which API method and required attribute are used to add a device into Cisco DNA Center with the native API?

- A. userSudiSerlalNos and deviceInfo
- B. GET and serialNumber
- **C. POST and name**
- D. lastSyncTime and pid

**Answer: C**

Explanation:

To add a device into Cisco DNA Center with the native API, the POST method and the name attribute are required. The POST method is used to create a new resource on the server, such as a device. The name attribute is used to specify the hostname or IP address of the device to be added. The POST method requires a JSON body that contains the device information, such as the name, type, role, credentials, and other optional parameters. The Cisco DNA Center API documentation provides an example of the JSON body and the response for adding a device<sup>1</sup>. The Cisco DNA Center Platform User Guide also explains how to use the native API to add devices<sup>2</sup>. References := 1: Cisco DNA Center API Documentation - Add Device 2: Cisco DNA Center Platform User Guide, Release 2.3.5 - Manage Devices Using the Native API

#### NEW QUESTION # 17

Which two commands are required when configuring a flow-export action on a Cisco ASA? (Choose two.)

- **A. policy-map**
- **B. flow-export event-type**
- C. flow-export template timeout-rate 15
- D. access-group
- E. access-list

**Answer: A,B**

Explanation:

To configure a flow-export action on a Cisco ASA, you need to use the flow-export event-type command and the policy-map command. The flow-export event-type command specifies the type of events that trigger the export of NetFlow Security Event Logging (NSEL) records to a collector. The policy-map command creates or modifies a policy map that can be applied to one or more interfaces to specify a service policy. A service policy consists of a traffic class and one or more actions to be applied to the traffic class. One of the actions can be a flow-export action that matches the NSEL events and sends them to a collector. The other commands are not required for configuring a flow-export action. The access-list command creates or modifies an access list that can be used to filter traffic or match traffic classes, but it is not mandatory for a flow-export action.

The flow-export template timeout-rate command specifies how often the ASA sends the template to the collector, but it is not part of the flow-export action configuration. The access-group command applies an access list to an interface, but it is not related to the flow-export action.
