Microsoft Power Platform Developer Sample Questions (Q331-Q336):

NEW QUESTION # 331

You need to determine the cause for the issue reported by the interviewers. What is the root cause of the issue?

- A. There was an error in the event pipeline and the entire transaction was rolled back.
- B. The plug-in used to synchronize the Person of Interest field from Contact to Interview was not triggered.
- C. There is no plug-in registered to run when an interview record is created.

Answer: C

NEW QUESTION # 332

You manage two Microsoft Power Platform solutions.

* Solution A contains a custom text column named customjext.

* Solution B contains a view that references the customjext column.

Both solutions in the managed state are installed in the destination environment.

You need to delete the customjext column and apply changes in the destination environment.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

The screenshot shows the 'Actions' list on the left and the 'Answer Area' on the right. The 'Actions' list contains four items:

- Remove the referenced custom_text column from the Solution B view in the source environment.
- Delete the custom_text column in the source environment.
- Export Solution A as managed from the source environment. Import Solution A to the destination environment.
- Export Solution B as managed from the source environment. Import Solution B to the destination environment.

The 'Answer Area' is empty, with up and down arrows for reordering.

Answer:

Explanation:

Answer Area

The 'Answer Area' shows the four actions from the 'Actions' list, arranged in the same order as they appear in the list:

- Remove the referenced custom_text column...
- Delete the custom_text column in the...
- Export Solution A as managed from the...
- Export Solution B as managed from the ...

- 1 - Remove the referenced custom_text column...
- 2 - Delete the custom_text column in the...
- 3 - Export Solution A as managed from the...
- 4 - Export Solution B as managed from the ...

NEW QUESTION # 333

You are creating a Microsoft Power Automate flow.

The flow must prompt a user for some input and populate a field in an app based on the user's input. You need to add an expression that returns User1 if the input from the user is High. Otherwise, the expression must return User2.

How should you complete the expression? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

The screenshot shows the 'Answer Area' with the expression editor. The expression is: `if( equals( outputs('UserInput')?['body', 'Type'], 'High' ), 'User1', 'User2' )`. The 'equals' function is selected in the dropdown menu. The 'User1' and 'User2' options are selected in the dropdown menus for the true and false results, respectively.

Answer:

Explanation:

Answer Area

if(equals {outputs('UserInput')?['body/Type'], 'High'}, User1 User2)

equals
greaterOrEquals
empty
item

User1 User2
User1 User1
User2 User2
True True
False False

Explanation:

Answer Area

if(equals {outputs('UserInput')?['body/Type'], 'High'}, User1 User2)

NEW QUESTION # 334

You are examining code written by another developer that is not functioning correctly. There are no other JavaScript or business rules in use on the form.

This code is properly registered to the OnChange event of the telephone1 field on an account entity form. The main operation is to update the primary contact's phone number when the account phone number changes. The primary contact field is a lookup. (Line numbers are included for reference only.)

```
01 function UpdatePrimaryContact(executionContext) {
02   var formContext = executionContext.getFormContext();
03   var formType = formContext.ui.getFormType();
04   if (formType !== 2) {
05     return;
06   }
07   var data =
08   {
09     "telephone1": formContext.getAttribute("telephone1").getValue()
10   }
11   var primaryContact = formContext.getAttribute("primarycontactid").getValue();
12   Xrm.WebApi.updateRecord("contact", primaryContact[0].id, data).then(
13     function success() {
14       ...
15       Xrm.Navigation.openAlertDialog({ text: "Updated" });
16     },
17     function fail() {
18       Xrm.Navigation.openErrorDialog({ message: "Error" });
19     }
20   );
21   Xrm.Navigation.openAlertDialog({ text: "Done" });
22 }
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
Updating the primary contact record will only happen when the form is in update mode.	☐	☐
If the primary contact field on the account does not have a value, the error dialog on line 18 is displayed.	☐	☐
The alert dialog on line 21 will always be shown after the update completes and the alert dialog on line 15 is shown.	☐	☐

Answer:

Explanation:

Statements	Yes	No
Updating the primary contact record will only happen when the form is in update mode.	☐	☐
If the primary contact field on the account does not have a value, the error dialog on line 18 is displayed.	☐	☐
The alert dialog on line 21 will always be shown after the update completes and the alert dialog on line 15 is shown.	☐	☐

NEW QUESTION # 335

A JavaScript function on a Contact form alerts users to what they need to type, as shown in the JavaScript Code exhibit. (Click the JavaScript Code tab.)

The screenshot shows the 'Edit Content' window in PowerApps, displaying JavaScript code for an OnChange event handler. The code is as follows:

```

if (typeof (JSNamespace) == "undefined")
{JSNamespace = {}; }

JSNamespace.tools = {
    showMsgOnField: function (exContext where
sMessage) {
    try {
        var whereField =
exContext.getEventSource();
        var formContext =
exContext.getFormContext();
        var msgId = where = "id";

        formContext.getControl(where).setNotification
(sMessage, msgId);

        fromContext.ui.setFormNotification(sMessage,
'INFO', msgId);
        window.setTimeout(function ()
(formContext.ui.clearFormNotification(msgId); },
3000):
    }
    catch (e){
        alert('showMsgOnField > > > ' +
e.description);
    }
}
}

```

At the bottom of the code editor, there is a link: "For information about how to interact with entities and fields programmatically, see the [Microsoft Dynamics 365 SDK](#)".

The Business Phone field has the OnChange event handler defined as shown in the Event Handler exhibit. (Click the Event Handler tab.)
