Test4Sure is intent on keeping up with the latest technologies and applying them to the exam questions and answers not only on the content but also on the displays. That is why our pass rate is high as 98% to 100%. The data are unique-particular in this career. With our C-S4CPB-2502 study torrent, you can enjoy the leisure study experience as well as pass the C-S4CPB-2502 Exam with success ensured. For the content of our C-S4CPB-2502 preparation materials is simplified by our professional experts and the displays are designed effectually. Just try and enjoy it!

SAP C-S4CPB-2502 Exam Syllabus Topics:

Topic	Details
Topic 1	• Data Migration and Business Process Testing: This section of the exam measures skills of SAP Cloud ERP Consultant and evaluates the ability to plan and execute data migration strategies and validate business processes through structured testing. Candidates are expected to be familiar with tools and methods for importing legacy data and confirming its integrity post-migration.

Topic 2	• Introduction to Cloud Computing and SAP Cloud ERP Basics: This section of the exam measures skills of ERP Implementation Project Manager and assesses foundational knowledge of cloud computing principles and SAP Cloud ERP structure. It ensures understanding of key differences from on-premise ERP, cloud deployment benefits, and basic navigation of cloud ERP systems.
Topic 3	• System Landscapes and Identity Access Management: This section of the exam measures skills of SAP Cloud ERP Consultant and involves understanding SAP's system landscape in the cloud, including tenants and environments. It also focuses on identity and access management, covering how user roles, permissions, and security are managed across the cloud ecosystem.
Topic 4	• Extensibility and Integration: This section of the exam measures skills of SAP Cloud ERP Consultant and deals with the capabilities of extending SAP applications to meet custom business requirements and integrating with other systems or services. The focus is on knowing when to extend standard functionality and how to ensure smooth system integration in a cloud context.

For the C-S4CPB-2502 web-based practice exam no special software installation is required, because it is a browser-based C-S4CPB-2502 practice test. The web-based SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition practice exam works on all operating systems like Mac, Linux, iOS, Android, and Windows. In the same way, IE, Firefox, Opera and Safari, and all the major browsers support the web-based SAP C-S4CPB-2502 Practice Test. So it requires no special plugins.

SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q25-Q30):

NEW QUESTION # 25

How can you migrate data to SAP S/4HANA Cloud Public Edition? Note: There are 2 correct answers to this question.

- A. With Core Data Services
- B. With a separate SAP HANA database
- C. With XML or CSV templates
- D. With the zero downtime service

Answer: B,C

NEW QUESTION # 26

You are using the Test Automation Tool. When do you define a data variant?

- A. After binding a process step field to a Test Data Container.
- B. After customizing a test process.
- C. After creating a test plan.
- D. After providing consent for Post-Upgrade Testing.

Answer: B

Explanation:

A data variant is a set of data values that can be used to execute a test process in the Test Automation Tool.

You can define multiple data variants for a test process to test different scenarios with different input data. You can also use data variants to parameterize your test process and reuse it for different test cases.

You define a data variant after binding a process step field to a Test Data Container. A Test Data Container is a reusable object that stores test data for a specific field or parameter. You can create and manage Test Data Containers in the Manage Test Data app.

You can bind a process step field to a Test Data Container by selecting the field in the Test Automation Tool and choosing the Test Data Container from the list. This will create a link between the field and the Test Data Container, allowing you to use the data

stored in the Test Data Container for the field2.

After binding a process step field to a Test Data Container, you can define a data variant by selecting the Test Data Container and choosing the Data Variant option. This will open a dialog where you can enter the data values for the data variant. You can also specify a name and a description for the data variant. You can create as many data variants as you need for a Test Data Container2. Therefore, the correct answer is B, as you define a data variant after binding a process step field to a Test Data Container.

References = 1 Test Automation Tool - SAP Help Portal 2 Test Data Containers - SAP Help Portal In the context of using the Test Automation Tool within SAP S/4HANA Cloud Public Edition, defining a data variant is a crucial step. This step occurs:

* After binding a process step field to a Test Data Container: A Test Data Container (TDC) is used to store data that can be reused across multiple test cases. When a field in a process step is bound to a TDC, it means that the test case will use the data specified within the TDC. After this binding, a data variant can be defined to specify different sets of data or conditions under which the test case should be executed. This allows for more flexible and comprehensive testing scenarios, ensuring that the application behaves as expected under various conditions.

NEW QUESTION # 27

Which of the following are examples of indirect digital access? Note: There are 2 correct answers to this question.

- A. An unattended bot in SAP Build Process Automation
- B. A Production Order created through a non-SAP front-end
- C. A Defect document created through an industry application
- D. A Time Sheet Record from a 3rd party application

Answer: C,D

Explanation:

Indirect digital access occurs when humans, devices, or systems use the digital core indirectly through non- SAP intermediary software, such as a non-SAP front end, a custom-solution, or any other non-SAP application1. Indirect digital access is measured by the number of documents created, updated, or deleted in the SAP system as a result of the indirect use2. Examples of indirect digital access include:

* A Defect document created through an industry application: This is an example of indirect digital access because the industry application is a non-SAP software that triggers the creation of a document in the SAP system.

* A Time Sheet Record from a 3rd party application: This is also an example of indirect digital access because the 3rd party application is a non-SAP software that triggers the creation of a document in the SAP system.

* An unattended bot in SAP Build Process Automation: This is not an example of indirect digital access because the bot is using SAP software to access the SAP system directly, not through a non-SAP intermediary software.

* A Production Order created through a non-SAP front-end: This is not an example of indirect digital access because the production order is not a document type that is counted for indirect digital access. The document types that are counted are: Sales Order, Invoice, Purchase Order, Service and Maintenance Document, Manufacturing Document, Quality Management Document, Time Sheet, Financial Document, and Material Document2. References = Digital Access | SAP Help Portal, SAP Digital Access / SAP Digital Access Adoption Program (DAAP) Extension through December 31, 2021

NEW QUESTION # 28

After integration requirements have been finalized, what is used to analyze, design, and document the integration strategy?

- A. SAP Cloud ALM Requirements app
- B. SAP Business Accelerator Hub
- C. Integration Solution Advisory Methodology
- D. Integration and API List

Answer: C

Explanation:

The Integration Solution Advisory Methodology (ISA-M) is a framework that helps customers and partners to define their integration strategy, design the integration architecture, and document the integration solution.

ISA-M covers the entire integration lifecycle, from planning and scoping to testing and deployment. ISA-M is based on best practices and recommendations from SAP and industry experts. ISA-M supports different integration scenarios, such as cloud-to-cloud, cloud-to-on-premise, and hybrid integration. ISA-M also provides tools and templates to facilitate the integration process, such as the Integration Assessment Questionnaire, the Integration Architecture Document, and the Integration Test Plan.
