Topic 9	<ul style="list-style-type: none"> Outbound Processes (Wave Management, Cross-docking, Production Integration): This topic covers combining outbound deliveries using wave management, packing and kitting in outbound processes, and staging products for production.
Topic 10	<ul style="list-style-type: none"> Warehouse Processing, Warehouse Task and Order Creation, Strategies: This topic includes defining warehouse process types and setting up determination, as well as defining putaway and picking strategies.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management Sample Questions (Q28-Q33):

NEW QUESTION # 28

Which of the following actions can you perform from the shipping cockpit? Note: There are 2 correct answers to this question.

- A. Assign outbound delivery orders and inbound deliveries to transportation units.
- **B. Create and check in transportation units.**
- C. Post goods receipts.
- **D. Create waves.**

Answer: B,D

Explanation:

The shipping cockpit in SAP Extended Warehouse Management (EWM) is a centralized tool designed for managing and monitoring shipping processes. The following actions can be performed from the shipping cockpit:

* Create Waves (A):

* Waves are created to group and release outbound delivery orders for picking and further processing.

* This action helps streamline the planning and execution of outbound deliveries.

* Create and Check In Transportation Units (B):

* The shipping cockpit enables the creation and check-in of transportation units (e.g., trucks or containers) for managing goods movement.

* This action ensures proper tracking and handling of shipments.

Incorrect Options:

* C: Assigning outbound delivery orders and inbound deliveries to transportation units is not directly performed from the shipping cockpit but through other EWM functionalities.

* D: Posting goods receipts is related to inbound processes and not typically handled in the shipping cockpit.

* SAP Help Portal: Configuration and Use of Shipping Cockpit

NEW QUESTION # 29

To which object do you assign the replenishment method?

- **A. Storage type**

- B. Warehouse process type
- C. Document type
- D. Document category

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Replenishment in SAP EWM moves stock from reserve to picking areas. Option A ("Storage type") is correct because the replenishment method (e.g., automatic, planned) is assigned to a storage type in SPRO: SCM Extended Warehouse Management > Goods Issue Process > Replenishment > Define Replenishment Control per Storage Type. This determines how replenishment is triggered for that area. Options B, C, and D (document-related or process type) are not directly linked to replenishment method assignment.

NEW QUESTION # 30

What are the key fields used to define a delivery document in SAP Extended Warehouse Management customizing? Note: There are 2 correct answers to this question.

- A. Document category
- B. System profile
- C. Document type
- D. Warehouse number

Answer: A,D

Explanation:

Key fields used to define a delivery document in SAP EWM customizing are:

- * C. Document Category:
 - * Specifies the category of the delivery document, such as inbound or outbound.
 - * Determines the processing rules for the document.
- * D. Warehouse Number:
 - * Associates the delivery document with a specific warehouse.
 - * Warehouse-specific settings influence how the document is processed.

Incorrect Options:

- * A: System profile is related to user settings, not delivery document definitions.
- * B: Document type defines finer details of the document but is not a primary key field.

References:

- * SAP EWM Documentation: Delivery Document Customization
- * SAP Help Portal: Delivery Document Type Configuration

NEW QUESTION # 31

What do you need to configure before you can create warehouse tasks for an outbound delivery order or an inbound delivery?

Note: There are 2 correct answers to this question.

- A. Warehouse process types
- B. Warehouse order creation rules
- C. Warehouse process type determination
- D. Putaway control indicator or stock removal control indicator

Answer: A,C

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Creating warehouse tasks in SAP EWM requires foundational configuration. Option B ("Warehouse process type determination") is correct because it defines how the system assigns a process type (e.g., putaway, picking) to a delivery item, configured in SPRO: SCM Extended Warehouse Management > Cross-Process Settings > Warehouse Task > Define Warehouse Process Type Determination. Option D ("Warehouse process types") is correct as it specifies the process flow (e.g., "PICK" for picking), set up in SPRO: SCM Extended Warehouse Management > Cross-Process Settings > Warehouse Task > Define Warehouse Process Type. Option A (indicators) influences task execution but isn't a prerequisite for creation, and option C (order creation rules) applies to

warehouse orders, not tasks directly.

NEW QUESTION # 32

Which of the following are product warehouse tasks during putaway with process-oriented storage control?

- A. The final process step
- B. The first and final process step
- C. The first process step
- D. All process steps

Answer: C

Explanation:

During putaway with process-oriented storage control in SAP EWM, product warehouse tasks are created for:

* A. The First Process Step:

* The first process step in process-oriented storage control involves initial movements or activities required for putaway.

* Subsequent process steps may involve intermediate storage or additional handling, but the product warehouse task pertains to the first step specifically.

Incorrect Options:

* B, C, D: Tasks for subsequent or final steps are managed separately and are not classified as product warehouse tasks for the first step.
