NEW QUESTION # 47

You are creating a query for a historical compensation story report in Query Designer. You have added the Job Information table to the query, configured a scope filter, and previewed the result to verify you are returning the appropriate employees. You add the related table Compensation to the query.

When you preview the query, you only get the current compensation information for the employees. Why do you only receive the current records? Note: There are 2 correct answers to this question.

- A. The Job information table time filter is set to: As of Date > Dynamic Date: Today.
- B. The Query Advanced Filter is set to: Job Information effective start date equal to Dynamic Date Today.
- C. The compensation table time filter is set to: Same Filter as First Table.
- D. The compensation table time filter is set to: As of Date > Dynamic Date: Today.

Answer: B,D

Explanation:

* Understanding Time Filters in Query Designer

* When creating a query, time filters determine the scope of the data retrieved. Filters such as As of Date or Dynamic Date often default to "Today," which retrieves only current records.

* Reason for Current Records Only

* Option B: The Compensation table filter is explicitly set to As of Date > Dynamic Date: Today.

This restricts the results to only the current compensation records.

* Option D: The Job Information filter is configured to match records with the effective start date equal to today, which also limits the results to current data.

* Why Other Options are Incorrect

* A: This filter applies to Job Information, not Compensation, and does not explain why only current compensation records are retrieved.

* C: "Same Filter as First Table" would align filters between tables, but does not necessarily restrict to current data.
