C_ACDET_2506 Study Questions - C_ACDET_2506 Free Demo & C_ACDET_2506 Valid Torrent

Without doubt, our SAP C_ACDET_2506 practice dumps keep up with the latest information and contain the most valued key points that will show up in the real SAP C_ACDET_2506 Exam. Meanwhile, we can give you accurate and instant suggestion for our customer services know every detail of our SAP C_ACDET_2506 exam questions.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q50-Q55):

NEW QUESTION # 50

When preparing to load legacy contracts during a Bluefield deployment in SAP Ariba Contracts, which of the following actions are

required to ensure a successful migration?

- A. Create a new customized contract upload process specifically for Bluefield deployments to accommodate differences in site structure.
- B. Skip the legacy contract upload step if the Production site already contains migrated Flex Master Data Templates.
- C. Use the exact same process and tools as used in the Greenfield migration scenario to upload legacy contracts.
- D. Manually enter legacy contract data into SAP Ariba Contracts using the application's UI instead of using import tools.

Answer: C

NEW QUESTION # 51

Which SAP Ariba solutions are included in SAP Ariba Strategic Sourcing Suite? Note: There are 2 correct answers to this question.

- A. SAP Ariba Contracts
- B. SAP Ariba Supplier Lifecycle and Performance
- C. SAP Ariba Buying and Invoicing
- D. SAP Ariba Category Management

Answer: A,D

NEW QUESTION # 52

A standard field is not available in reporting. A Greenfield customer needs to be able to report on the data captured in that standard field. How can this be achieved?

- A. Create a custom field that can be marked reportable, default the custom field to the standard field value, publish, and then pull the field into reporting.
- B. Under Field Configurations, search for the field in the appropriate class, mark the field reportable, save and publish.
- C. The system makes all fields reportable after a system refresh.
- D. All standard fields are reportable by default.

Answer: A

Explanation:

Some standard fields in SAP Ariba are not reportable by design and cannot be made reportable through configuration changes. The recommended workaround is to create a custom field that is marked as reportable, then set its default value to the standard field's value using an expression. Once published, this custom field can be included in reports, effectively surfacing the data previously inaccessible for reporting. System refreshes do not convert non-reportable standard fields to reportable. Marking the original standard field as reportable is not possible if the option is disabled by design.

NEW QUESTION # 53

Which of the following is NOT mentioned as a configuration type migrated by the Intelligent Configuration Manager?

- A. DynamicForm - custom form templates (dForms)
- B. Template - project templates such as Contract templates
- C. SupplierContact - contacts for the suppliers
- D. AMLExtension - AML customizations such as custom fields

Answer: C

Explanation:

The Intelligent Configuration Manager (ICM) migrates configuration types such as DynamicForms (dForms), AML Extensions (custom fields and enumerations), and Templates (contract or project templates). However, SupplierContact data, which is master or transactional data, is not migrated through ICM because ICM focuses on configuration migration, not operational or transactional data. Supplier contact information is managed separately and must be migrated using appropriate master data processes.

NEW QUESTION # 54

You want to apply a preset filter to a custom field so that it only shows valid values based on the value of another field. What do you use to apply predefined filter criteria for a field?

- A. Load Relation types and Relation entries
- B. Define a Visibility Condition in the Conditions tab
- C. Enable field property "Enable for Template Field Setter" in the Advanced tab
- **D. Populate the "Relation Name" and "NameTableConstraintFieldPath" in the Advanced tab**
- E. Enable field property "Use relationship chooser" in the Advanced tab

Answer: D

Explanation:

To filter a custom field's available values based on another field's value in SAP Ariba, you populate the "Relation Name" and "NameTableConstraintFieldPath" properties in the field's Advanced tab. This configuration links the field to a predefined relation type and specifies the constraint field used for filtering.

Simply loading relation types (B) is a prerequisite but does not configure filtering on the field itself. Visibility conditions (C) control whether a field is shown, not the filtering of its values. Enabling "Use relationship chooser" (D) is necessary but insufficient alone without defining the relation and constraint field. The "Enable for Template Field Setter" (E) option is unrelated to filtering. This filtering enables dynamic picklists where options depend on another field's selection, improving data accuracy and user experience.

NEW QUESTION # 55

.....

One of the most effective strategies to prepare for the SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite (C_ACDET_2506) exam successfully is to prepare with actual SAP C_ACDET_2506 exam questions. It would be difficult for the candidates to pass the C_ACDET_2506 exam on the first try if the C_ACDET_2506 study materials they use are not updated. Studying with invalid C_ACDET_2506 practice material results in a waste of time and money. Therefore, updated SAP C_ACDET_2506 practice questions are essential for the preparation of the C_ACDET_2506 exam.
