SAP C_C4H62_2408 Exam Syllabus Topics:

Topic	Details
Topic 1	Managing Clean Core: This section reviews the skills of ERP Administrators and SAP Consultants. It focuses on applying clean core principles to ERP systems to enhance agility, minimize adaptation, and accelerate innovation.
Topic 2	Console – Administration and Configuration: This section examines the capabilities of System Administrators and SAP Data Cloud Administrators. It involves configuring user groups, applications, permissions, and API Keys through the SAP Customer Data Cloud's Administration Console.
Topic 3	Data Schema: This section evaluates the skills of Data Architects and SAP Developers. It focuses on utilizing the Identity and Data Store in SAP Customer Data Cloud, including the creation and updating of schema fields using the schema editor and REST API.
Topic 4	Extensibility and Dataflows: This section tests the expertise of Integration Specialists and SAP Consultants. It involves configuring webhook events, securing webhooks, managing Identity Sync flows, and setting up Dataflows schedules.
Topic 5	Enterprise Preference Management: This section measures the skills of Consent Management Specialists and SAP Consultants. It covers enterprise consent management, including the implementation of SAP customer consent and the use of screenshots and REST API.
Topic 6	Customer Identity and Site Groups: This section assesses the abilities of SAP Customer Data Cloud Consultants and Developers. It includes configuring Customer Identity policies, screen-sets, social login, account linking, and progressive profiling.

100% Pass-Rate Latest C_C4H62_2408 Test Testking – Correct Visual Cert Test for C_C4H62_2408

The users will notice the above favorable qualities in the web-based SAP C_C4H62_2408 Practice Test. But the distinguishing factor that will add to your comfort is that it is suitable for all operating systems (IOS, Macs, Androids, and Windows). The valuable part of this format is that it does not require frustrating installations or heavy plugins.

SAP Certified Associate - Implementation Consultant - SAP Customer Data Cloud Sample Questions (Q43-Q48):

NEW QUESTION # 43

What actions can you perform on a permission group?

Note: There are 2 correct answers to this question.

- A. Delete group
- B. Map to SAML provider group
- C. Duplicate group
- D. Clone group

Answer: A,B

Explanation:

In SAP Customer Data Cloud, you can perform specific actions on a permission group, which is used to manage user permissions and roles. The correct actions are:

* Option A: Correct. You can delete a permission group if it is no longer needed. This action removes the group and its associated permissions.

* Option B: Correct. You can map a permission group to a SAML provider group. This allows synchronization of permissions between SAP Customer Data Cloud and external identity providers using SAML.

* Option C: Incorrect. Cloning a permission group is not a supported action in SAP Customer Data Cloud.

* Option D: Incorrect. Duplicating a permission group is also not a supported feature.

NEW QUESTION # 44

What data is required to perform signature validation to verify the authenticity of an API request?

Note: There are 3 correct answers to this question.

- A. LoginId
- B. UID
- C. signature Timestamp
- D. UIDSignature
- E. userKey

Answer: B,C,D

Explanation:

To perform signature validation and verify the authenticity of an API request in SAP Customer Data Cloud, the following data is required:

* Option A: Correct. The UIDSignature is a cryptographic signature generated using the user's unique identifier (UID) and a secret key. It ensures the integrity and authenticity of the UID.

* Option B: Correct. The UID (unique identifier) is the user's unique ID in the system. It is used as part of the signature validation process to ensure the request corresponds to the correct user.

* Option C: Incorrect. The userKey is not directly involved in signature validation. It is typically used for API key-based authentication.

* Option D: Incorrect. The LoginID (e.g., email or username) is not required for signature validation. It is used for identifying users during login but is not part of the signature validation process.

* Option E: Correct. The signature timestamp ensures that the request is time-bound and prevents replay attacks by verifying that the signature was generated within a valid timeframe.

- * API Request Authentication

NEW QUESTION # 45

You used Social Login to implement Web screen-sets on your mobile application; however, the pop-up window is being blocked by the mobile browser, and as a consequence, the login process is failing.

How do you fix this? Note: There are 2 correct answers to this question.

- A. Write a custom code to avoid a pop-up window.
- B. Handle the onLogin event.
- C. Use the authFlow: 'redirect param'
- D. Set the Success Screen using the Console's UI Builder to avoid the pop-up window.

Answer: A,C

NEW QUESTION # 46

Which email verification settings can you define inside the Customer Identity policies of the SAP Customer Data Cloud console?

Note: There are 2 correct answers to this question.

- A. Whether code verification is used
- B. Verification email sender address
- C. Whether users are automatically logged in upon verifying their password
- D. Verification link expiration time

Answer: B,D

NEW QUESTION # 47

Once the Web SDK has loaded, some additional code needs to be run.

What is the best practice for this use case?

- A. Use the onGigyaServiceReady function
- B. Use the <head> tag
- C. Use accounts.addEventHandlers
- D. Use the JavaScript onLoad event

Answer: A

NEW QUESTION # 48
