Our C_CPI_2506 Exam Braindumps cover many questions and answers of the real test so that you can be familiar with the real test question. When you attend C_CPI_2506 exam, it is easy for you to keep good mood and control your finishing time.

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 2	Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 3	SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.

Topic 4	• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.

SAP Certified Associate - Integration Developer Sample Questions (Q34-Q39):

NEW QUESTION # 34

What authentication method does the Service Key use to grant access when you generate a Service Key for an SAP Integration Suite Event Mesh message client?

- A. API Key authentication
- B. Basic Authentication
- C. auth 2.0 client authentication
- D. 509 client certificates

Answer: C

Explanation:

When generating a Service Key for an SAP Integration Suite Event Mesh message client, the credentials contain details required for authentication and connection.

Event Mesh uses OAuth 2.0 client credential flow for secure access.

The Service Key includes:

Client ID

Client Secret

OAuth Token URL

These values are used by applications to authenticate and obtain tokens before accessing Event Mesh queues or topics.

Other methods (Basic Authentication, API Keys, X.509 certificates) are not used by default for Event Mesh service keys.

NEW QUESTION # 35

In the Cloud Integration capability within SAP Integration Suite, which internal message format is used?

- A. XML
- B. XSLT
- C. JSON

Answer: A

Explanation:

In the Cloud Integration capability within SAP Integration Suite, XML is the internal message format that is used. XML stands for Extensible Markup Language and is a standard format for representing structured data. All messages that are processed by the Cloud Integration capability are converted to XML internally and then transformed to the desired format at the outbound channel.

NEW QUESTION # 36

Which expression language can you use to access the content of a message in an integration flow?

- A. XML expression language
- B. Spring expression language
- C. Simple expression language
- D. JavaScript expression language

Answer: C

Explanation:

In SAP Cloud Integration, the runtime message content, headers, and properties can be accessed using the Camel Simple

Expression Language.

Examples:

`${body}` # Accesses the message payload.

`${header.<headerName>}` # Accesses message headers.

`${property.<propertyName>}` # Accesses integration properties.

Other options:

XML expression language # Not supported directly.

Spring expression language # Used in Spring apps, not in SAP CPI.

JavaScript expression language # Not used; JavaScript/Groovy scripts exist, but not for message expressions.

Thus, the correct language is Simple expression language.

NEW QUESTION # 37

You want to set up an SAP backend system through the Cloud Connector with an API provider. Which connection type do you use?

- A. Open Connectors
- **B. On-premise**
- C. Cloud Integration
- D. Internet

Answer: B

Explanation:

To connect an SAP backend system through the Cloud Connector with an API provider, you must use the on-premise connection type. The Cloud Connector acts as a link between SAP Integration Suite and on-premise systems, enabling secure and controlled access to the backend resources. The on-premise connection type allows you to specify the internal host and port of the backend system, as well as the virtual host and port that will be exposed to SAP Integration Suite. You can also define access control rules and protocols for the on-premise connection. Reference: Part 2: Connect to on-premise APIs from SAP Cloud Platform API Management Cloud Foundry Environment | SAP Blogs, How to configure SAP Cloud Connector & Create API using SCP API Management | SAP Blogs

NEW QUESTION # 38

In the SAP Integration Suite, where can you change the virtual host name?

- A. Configure ? APIs
- **B. Settings APIs**
- C. Discover - APIs
- D. Design APIs

Answer: B

Explanation:

In the SAP Integration Suite, you can change the virtual host name in the Settings APIs. The Settings APIs allow you to configure various aspects of your API provider, such as the virtual host name, the base path, the authentication method, and the CORS settings.
