### **NEW QUESTION # 31**

What allows professional counselors to diagnose emotional and mental disorders?

- A. reading the DSM-5-TR
- B. a counseling class
- **C. adequate training**

**Answer: C**

Explanation:

Adequate training is required for professional counselors to diagnose emotional and mental disorders. This involves specialized education, supervised experience, and ongoing professional development in assessment and diagnosis, rather than simply attending a single class or reading diagnostic manuals. Proper training ensures ethical and accurate practice within the counselor's scope of competence.

### **NEW QUESTION # 32**

The statement, "Members of a community should believe that mental health professionals have a legitimate right to determine and implement treatment interventions for troubled clients," illustrates the frame of mind known as the psychological set.

- A. identity
- **B. authority**
- C. economic

**Answer: B**

Explanation:

The psychological set of "authority" refers to the belief that certain professionals or figures have a legitimate right to make important decisions and implement interventions for others. In counseling, this set influences how communities and clients perceive the counselor's legitimacy and power to provide guidance and treatment.

### **NEW QUESTION # 33**

Which of the following is ethical behavior for a professional counselor?

- **A. deidentifying research data to ensure client anonymity**
- B. encouraging pregnant clients not to have abortions
- C. advertising discount group counseling services

**Answer: A**

Explanation:

Deidentifying research data to ensure client anonymity is an ethical standard in research and counseling practice. It protects client confidentiality and complies with legal and ethical guidelines. Advertising discount services may raise ethical issues related to solicitation, and directing a client's reproductive choices violates client autonomy and ethical codes.

### **NEW QUESTION # 34**

A mental health counselor solicited both male and female volunteers for participation in either individual or group counseling for stress reduction. To determine if the proportions of female and male participants in each counseling category were as would be expected, the counselor computed

- A. a f-test.
- B. an analysis of covariance.
- **C. a chi-square.**

**Answer: C**

Explanation:

The chi-square test is used to determine if there is a significant association between categorical variables—in this case, gender (male/female) and type of counseling (individual/group). It assesses whether the observed distribution of participants differs from what would be expected by chance.

### **NEW QUESTION # 35**

Counselors are ethically permitted to conduct deception studies when

- **A. there are no feasible alternatives and debriefing is provided.**
- B. obtaining informed consent would bias the research results.
- C. the research subject matter is controversial or sensitive.

**Answer: A**

Explanation:

Ethically, counselors and researchers may only use deception in studies when there are no feasible alternatives, the study has significant scientific, educational, or applied value, and participants are debriefed as soon as possible after participation. Deception should never be used simply because the subject is controversial or to avoid informed consent without justification.
