220-1102 Testdump & 220-1102 Detailed Study Dumps

As we know, everyone has opportunities to achieve their own value and life dream. And our 220-1102 can help them achieve all of these more easily and leisurely. Our 220-1102 exam materials are pleased to serve you as such an exam tool. With over a decade's endeavor, our 220-1102 Practice Guide successfully become the most reliable products in the industry. There is a great deal of advantages of our 220-1102 exam questions you can spare some time to get to know.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q395-Q400):

NEW QUESTION # 395

A technician is working at a client office site and the technician's family member repeatedly calls and texts about a non-emergency situation. Which of the following should the technician do?

- A. Ignore the phone and continue working.
- B. Text a reply.
- C. Step aside and answer.
- D. Put the phone on silent.

Answer: D

Explanation:

In a professional work environment, distractions should be minimized, especially when working onsite for a client. The best approach is to put the phone on silent (Option B) to avoid interruptions while remaining professional.

Step aside and answer (Option A): Not recommended as it disrupts work and appears unprofessional.

Text a reply (Option C): While this may seem reasonable, it still causes a distraction.

Ignore the phone and continue working (Option D): While focusing on work is important, completely ignoring calls may not be the best approach. Silent mode ensures work continuity while allowing the technician to check messages later.

Reference: CompTIA A+ Core 2 (220-1102) Exam Objectives - 4.6: Given a scenario, apply best practices associated with documentation and professionalism.

NEW QUESTION # 396

Which of the following editions of Windows 10 requires reactivation every 180 days?

- A. Pro
- **B. Enterprise**
- C. Home
- D. Pro for Workstation

Answer: B

Explanation:

Windows 10 Enterprise is an edition of Windows 10 that is designed for large organizations that need advanced security and management features. Windows 10 Enterprise can be activated using different methods, such as Multiple Activation Key (MAK), Active Directory-based Activation (ADBA), or Key Management Service (KMS)¹. KMS is a method of activation that uses a local server to activate multiple devices on a network. KMS activations are valid for 180 days and need to be renewed periodically by connecting to the KMS server². If a device does not renew its activation within 180 days, it will enter a grace period of 30 days, after which it will display a warning message and lose some functionality until it is reactivated³. The other editions of Windows 10 do not require reactivation every 180 days. Windows 10 Pro for Workstation is an edition of Windows 10 that is designed for high-performance devices that need advanced features such as ReFS file system, persistent memory, and faster file sharing. Windows 10 Pro for Workstation can be activated using a digital license or a product key. Windows 10 Home is an edition of Windows 10 that is designed for personal or home use. Windows 10 Home can be activated using a digital license or a product key. Windows 10 Pro is an edition of Windows 10 that is designed for business or professional use. Windows 10 Pro can be activated using a digital license or a product key. None of these editions require reactivation every 180 days unless there are significant hardware changes or other issues that affect the activation status.

NEW QUESTION # 397

Which of the following is used to explain issues that may occur during a change implementation?

- A. Rollback plan
- B. End-user acceptance
- **C. Risk analysis**
- D. Scope change

Answer: C

Explanation:

Risk analysis is used to explain issues that may occur during a change implementation. Risk analysis is a process of identifying, assessing and prioritizing potential risks that may affect a project or an activity. Risk analysis can help determine the likelihood and impact of various issues that may arise during a change implementation, such as technical errors, compatibility problems, security breaches, performance degradation or user dissatisfaction. Risk analysis can also help plan and prepare for mitigating or avoiding these issues.

Scope change is a modification of the original goals, requirements or deliverables of a project or an activity.

Scope change is not used to explain issues that may occur during a change implementation but to reflect changes in expectations or needs of the stakeholders. End-user acceptance is a measure of how well the users are satisfied with and adopt a new system or service. End-user acceptance is not used to explain issues that may occur during a change implementation but to evaluate the success and effectiveness of the change.

Rollback plan is a contingency plan that describes how to restore a system or service to its previous state in case of a failed or problematic change implementation. Rollback plan is not used to explain issues that may occur during a change implementation but to recover from them. NEW QUESTION # 398

A user reported that Windows has crashed several times during the day. A technician needs to check error messages to determine whether the issue pertains to the hardware or an application. Which of the following tools should the technician use?

- A. Device Manager
- **B. Event Viewer**
- C. Performance Monitor
- D. Resource Monitor

Answer: B

Explanation:

Event Viewer (Option A) is the appropriate tool to check for system and application logs, including error messages and crash reports. It helps the technician determine the cause of the crashes by reviewing logged events.

- * Resource Monitor (Option B) tracks real-time usage of system resources but doesn't log errors.
- * Performance Monitor (Option C) monitors system performance but isn't primarily used for crash diagnostics.
- * Device Manager (Option D) manages hardware devices but doesn't provide crash logs.

CompTIA A+ Core 2 References:

- * 3.1 - Troubleshoot common Windows OS problems using tools like Event Viewer

NEW QUESTION # 399

A user reported that Windows has crashed several times during the day. A technician needs to check error messages to determine whether the issue pertains to the hardware or an application. Which of the following tools should the technician use?

- A. Device Manager
- **B. Event Viewer**
- C. Performance Monitor
- D. Resource Monitor

Answer: B

Explanation:

Detailed

Event Viewer (Option A) is the appropriate tool to check for system and application logs, including error messages and crash reports. It helps the technician determine the cause of the crashes by reviewing logged events.

Resource Monitor (Option B) tracks real-time usage of system resources but doesn't log errors.

Performance Monitor (Option C) monitors system performance but isn't primarily used for crash diagnostics.

Device Manager (Option D) manages hardware devices but doesn't provide crash logs.

CompTIA A+ Core 2 Reference:

- 3.1 - Troubleshoot common Windows OS problems using tools like Event Viewer

NEW QUESTION # 400

.....

When we are in some kind of learning web site, often feel dazzling, because web page design is not reasonable, put too much information all rush, it will appear desultorily. Absorbing the lessons of the 220-1102 test prep, will be all kinds of qualification examination classify layout, at the same time on the front page of the 220-1102 test materials have clear test module classification, so clear page design greatly convenient for the users, can let users in a very short period of time to find what they want to study, and then targeted to study.
