Which action is required to accomplish this?

- A. Create a query with a results based interaction as a filter using the limit query to pass in the 10 Account IDs.
- **B. Create a query and sort descending by revenue and limit it to 10 results.**
- C. Create 2 query with a selection based interaction as a filter using the limit query to pass in the 10 Account IDs.

Answer: B

Explanation:

To create a dashboard showing the top 10 accounts by revenue dynamically, the best approach is to create a query that sorts the accounts in descending order by revenue and limits the results to the top 10. This query can then be used as the data source for the widget, ensuring that it dynamically adjusts based on the filters applied to the dashboard.
