Earning the Salesforce CRT-211 certification is an important achievement for advanced administrators who are looking to advance their careers and demonstrate their expertise in the Salesforce platform. Certification Preparation for Advanced Administrator certification is widely recognized in the industry and demonstrates to potential employers and clients that the individual has the skills and knowledge needed to implement advanced features and functionality in Salesforce. In addition, Salesforce certified professionals are often able to command higher salaries and enjoy increased job security and career growth opportunities.

Salesforce is the world's leading Customer Relationship Management (CRM) platform, used by organizations of all sizes and industries to manage their customer interactions, sales processes, and marketing campaigns. As Salesforce's popularity continues to grow, the demand for skilled professionals who can administer and customize the platform has also increased. One way to demonstrate expertise in Salesforce administration is to obtain the Salesforce CRT-211 (Certification Preparation for Advanced Administrator) certification.

Salesforce Certification Preparation for Advanced Administrator Sample Questions (Q26-Q31):

NEW QUESTION # 26

In addition to setting the standard price, what must you also do in order to add a Product to a Custom Price Book?

- A. Select a Product Family
- B. Enter a Product Description.
- **C. Check the Active checkbox.**
- D. Enter a Product Code.

Answer: C

NEW QUESTION # 27

An administrator is creating a custom Opportunity record page for Sales users for new logo opportunities. They need to control what fields display on the record when a sales user is viewing the opportunity.

Where should the administrator edit what fields display in the details of the record page?

- A. Record Detail Component
- B. Record Types
- **C. Page Layout**
- D. Custom Lightning Component

Answer: C

Explanation:

The fields that display in the details of the record page are controlled by the page layout assigned to the user's profile and record type. The administrator can edit the page layout to add, remove, or reorder fields on the record page. Reference:

NEW QUESTION # 28

Dream house Realty has created a custom object to track its Open Houses with a master-detail relationship up to a custom object for Properties. Agents need to quickly calculate the number of Open House records in a status or Pending so they can see the value from the Property record.

What feature should the administrator implement?

- A. Formula Fields
- B. visualforce Page
- C. Lightning Component
- **D. Roll-Up Summary**

Answer: D

Explanation:

A roll-up summary field is used to display a value in a master record based on the values of a set of related detail records. In this case, the administrator can create a roll-up summary field on the Properties object that counts the number of Open House records in a Pending status. References: https://help.salesforce.com/s/articleView?id=sf.fields_about_roll_up_summary_fields.htm&type=5

NEW QUESTION # 29

Universal Containers wants to implement a new entitlement process for premier support accounts. This support includes phone contact with the customer every 24 hours from the time the case is created for as long as it remains open.

How should an administrator configure this requirement?

- **A. Enable milestone tracker**
- B. Configure an escalation rule
- C. Build a sequential milestone
- D. Create an independent milestone

Answer: A

Cloud Kicks has two record-triggered flows on the same object. One flow creates a child record when criteria are met. The second record-triggered flow is based on criteria to check if the child record exists and updates a field. The field on the child record that needs to be updated is still null after the second record trigger. What should the administrator do to resolve this issue?

- A. flows into schedule flows and have them update the field.
- B. Have the record-triggered flows fire on create or edit to update the field.
- C. Combine the two flows into one with checks to see which part of the flow needs to be run.
- D. Make a new record-triggered flow on the child object to update the field on the parent record.
