## AVIXA CTS-D: Loudspeakers Exam Questions With Correct Answers

Distributed Loudspeaker System - answer✓✓Employs multiple loudspeakers that are separated by some distance from each other. This is most commonly done by placing them in the ceiling above the audience area.

Loudspeaker polar pattern directivity - answer✓✓how much area a selected loudspeakers will cover, typically in balloon plot format representing a specific frequency response

Coverage is typically stated at the 6 dB down points with 5 degree markings

Speech Reinforcement typical loudspeaker frequency rating - answer✓✓2000 Hz (2 kHz)

What two items do a loudspeaker polar chart indicate? - answer✓✓1. The radiated energy of a loudspeaker at a given frequency in either the vertical or horizontal plane. Energy radiates outward - but not equally - in all directions from the loudspeaker, and polar plots are used to show the pattern of the energy.

2. The degree off-axis where the radiated energy decreases by 6 dB as compared to the on axis level. These locations are referred to as the, "6 dB down points." Most often, the coverage pattern in equipment specifications is typically stated at the 6 dB down points.

Loudspeaker Coverage Formula - answer✓✓This is the formula for the diameter of the circle representing the coverage area of a loudspeaker:

$$D = 2 * (H - h) * \tan (C\angle / 2)$$

Where:

D is the diameter of the coverage area

H is the ceiling height
