With Data-Architect test training materials of TorrentExam, you can put away with disorder emotion and clean up them. Data-Architect test training materials of TorrentExam are the most accurate training materials in the current market. Using it, the passing rate of Data-Architect Exam is 100%. Choose TorrentExam is equal to choose success.

Salesforce Data-Architect (Salesforce Certified Data Architect) Exam is a certification program designed for professionals who want to validate their skills and knowledge in designing and managing data architecture on the Salesforce platform. Data-Architect exam is intended for individuals who have experience in designing, building, and implementing data architecture solutions on the Salesforce platform. In addition, candidates must have a deep understanding of data modeling, data management, and data governance concepts.

Salesforce Data-Architect Certification Exam is designed to test the skills and knowledge of data architects who work with Salesforce. Salesforce Certified Data Architect certification is aimed at professionals who are responsible for designing and implementing data architectures that support the Salesforce platform. The Salesforce Data-Architect certification is considered to be one of the most prestigious certifications in the field of Salesforce, and passing the exam is a significant achievement for any data architect.

Reliable Data-Architect Test Sims & Data-Architect Hot Questions

Perhaps you have wasted a lot of time to playing computer games. It doesn't matter. It is never too late to change. There is no point in regretting for the past. Our Data-Architect exam questions can help you compensate for the mistakes you have made in the past. You will change a lot after learning our Data-Architect Study Materials. And most of all, you will get reward by our Data-Architect training engine in the least time with little effort.

Salesforce Certified Data Architect Sample Questions (Q192-Q197):

NEW QUESTION # 192
Get Cloudy Consulting uses an invoicing system that has specific requirements. One requirement is that attachments associated with the Invoice_c custom object be classified by Types (i.e., '"Purchase Order"', '"Receipt"', etc.) so that reporting can be performed on invoices showing the number of attachments grouped by Type.
What should an Architect do to categorize the attachments to fulfill these requirements?

- A. Create a custom object related to the Invoice object with a picklist field for the Type.
- B. Add additional options to the standard ContentType picklist field for the Attachment object.
- C. Add a ContentType picklist field to the Attachment layout and create additional picklist options.
- D. Create a custom picklist field for the Type on the standard Attachment object with the values.

Answer: A

NEW QUESTION # 193
Universal Containers (UC) is migrating from a legacy system to Salesforce CRM, UC is concerned about the quality of data being entered by users and through external integrations.
Which two solutions should a data architect recommend to mitigate data quality issues?

- A. Leverage third-party- AppExchange tools
- B. Leverage Apex to validate the format of data being entered via a mobile device.
- C. Leverage validation rules and workflows.
- D. Leverage picklist and lookup fields where possible

Answer: C,D

Explanation:
According to the Salesforce documentation1, data quality is the measure of how well the data in Salesforce meets the expectations and requirements of the users and stakeholders. Data quality can be affected by various factors, such as data entry errors, data duplication, data inconsistency, data incompleteness, data timeliness, etc. To mitigate data quality issues, some of the recommended solutions are:
Leverage picklist and lookup fields where possible (option A). This means using fields that restrict the values or references that can be entered by the users or integrations. This can help reduce data entry errors, enforce data consistency, and improve data accuracy.
Leverage validation rules and workflows (option C). This means using features that allow defining rules and criteria to validate the data that is entered or updated by the users or integrations. This can help prevent invalid or incorrect data from being saved, and trigger actions or alerts to correct or improve the data.
Leveraging Apex to validate the format of data being entered via a mobile device (option B) is not a good solution, as it can be complex, costly, and difficult to maintain. It is better to use standard features or declarative tools that can handle data validation more effectively. Leveraging third-party AppExchange tools (option D) is also not a good solution, as it can incur additional costs and dependencies. It is better to use native Salesforce features or custom solutions that can handle data quality more efficiently.

NEW QUESTION # 194
UC has a roll-up summary field on Account to calculate the count of contacts associated with an account. During the account load, SF is throwing an "Unable to lock a row" error.
Which solution should a data architect recommend, to resolve the error?

- A. Defer roll-up summary fields calculation during data migration.
- B. Perform Batch job in serial mode and reduce batch size
- C. Perform Batch job in parallel mode and reduce Batch size

- D. Leverage data loader platform API to load data.

Answer: B

Explanation:
The best solution to resolve the error of "Unable to lock a row" during the account load is to perform batch job in serial mode and reduce batch size. This is because roll-up summary fields are calculated synchronously when the parent record is updated, and asynchronously when the child record is updated. Therefore, updating many child records at once can cause locking issues on the parent record. To avoid this, it is recommended to use serial mode and smaller batch sizes when loading data using tools like Data Loader or Bulk API12. Leverage data loader platform API to load data is not a good option because it does not specify the mode or batch size. Perform batch job in parallel mode and reduce batch size is not a good option because parallel mode can still cause locking issues even with smaller batches. Defer roll-up summary fields calculation during data migration is not a good option because it is not possible to defer or disable roll-up summary fields calculation

NEW QUESTION # 195
A large automobile company has implemented Salesforce for its sales associates. Leads flow from its website to Salesforce using a batch integration in Salesforce. The batch job converts the leads to Accounts in Salesforce. Customers visiting their retail stores are also created in Salesforce as Accounts.
The company has noticed a large number of duplicate Accounts in Salesforce. On analysis, it was found that certain customers could interact with its website and also visit the store. The sales associates use Global Search to search for customers in Salesforce before they create the customers.
Which option should a data architect choose to implement to avoid duplicates?

- A. Build a custom search functionality that allows sales associates to search for customer in real time upon visiting their retail stores.
- B. Develop an Apex class that searches for duplicates and removes them nightly.
- C. Implement an MDM solution to validate the customer information before creating Salesforce.
- D. leverage duplicate rules in Salesforce to validate duplicates during the account creation process.

Answer: D

NEW QUESTION # 196
Universal Containers (UC) is a major supplier of office supplies. Some products are produced by UC and some by other manufacturers. Recently, a number of customers have complained that product descriptions on the invoices do not match the descriptions in the online catalog and on some of the order confirmations (e.g., "ballpoint pen" in the catalog and "pen" on the invoice, and item color labels are inconsistent: "what vs. "White" or "blk" vs. "Black"). All product data is consolidated in the company data warehouse and pushed to Salesforce to generate quotes and invoices. The online catalog and webshop is a Salesforce Customer Community solution. What is a correct technique UC should use to solve the data inconsistency?

- A. Define a data taxonomy for product data and apply the taxonomy to the product data in the data warehouse.
- B. Build Apex Triggers in Salesforce that ensure products have the correct names and labels after data is loaded into salesforce.
- C. Change integration to let product master systems update product data directly in Salesforce via the Salesforce API.
- D. Add custom fields to the Product standard object in Salesforce to store data from the different source systems.

Answer: A

NEW QUESTION # 197
......

In modern society, you cannot support yourself if you stop learning. That means you must work hard to learn useful knowledge in order to survive especially in your daily work. Our Data-Architect study materials are filled with useful knowledge, which will broaden your horizons and update your skills. Lack of the knowledge cannot help you accomplish the tasks efficiently. If you are still in colleges, it is a good chance to learn the knowledge of the Data-Architect Study Materials because you have much time.
