## Updated JN0-481 Dumps - JN0-481 Verified Answers

JN0-481 test guide is not only the passbooks for students passing all kinds of professional examinations, but also the professional tools for students to review examinations. In the past few years, JN0-481 question torrent has received the trust of a large number of students and also helped a large number of students passed the exam smoothly. That is to say, there is absolutely no mistake in choosing our JN0-481 Test Guide to prepare your exam, you will pass your exam in first try and achieve your dream soon.

## Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q49-Q54):

### NEW QUESTION # 49

You are installing a Juniper Apstra server in your data center. You have multiple users that will be expected to configure, manage, and carry out operational tasks in your data center. You have decided to implement remote user authentication for the role-based access control of your Apstra server. In this scenario, which three methods are supported? (Choose three.)

- A. RADIUS
- B. Auth0
- C. SAML
- D. TACACS+
- E. LDAP

Answer: A,D,E

Explanation:

To implement remote user authentication for the role-based access control of your Apstra server, you can use one of the following

methods: TACACS+, LDAP, or RADIUS. These are the protocols that Juniper Apstra supports to authenticate and authorize users based on roles assigned to individual users within an enterprise. You can configure the Apstra server to use one or more of these protocols as the authentication sources and specify the order of preference. You can also configure the Apstra server to use local user accounts as a fallback option if the remote authentication fails.

#### NEW QUESTION # 50

In Juniper Apstra, which three modes are available for devices? (Choose three.)

- A. Stopped
- B. Drain
- C. Active
- D. Deploy
- E. Ready

**Answer: B,D,E**

Explanation:

Juniper Apstra supports three deploy modes for devices: Deploy, Drain, and Ready. These modes determine the configuration and state of the devices in the data center fabric.

Deploy: This mode applies the full Apstra-rendered configuration to the device, according to the Apstra Reference Design. The device state becomes IS-ACTIVE and the device is ready to carry traffic in the fabric.

Drain: This mode adds a "drain" configuration to the device, which prevents any new traffic from entering the device. The device state becomes IS-READY and the device is prepared for maintenance or decommissioning.

Ready: This mode removes the Apstra-rendered configuration from the device, leaving only the basic configuration such as device hostname, interface descriptions, and port speed/breakout.

The device state becomes IS-READY and the device is not part of the fabric.

#### NEW QUESTION # 51

How does Apstra use Fabric Device Management to ensure consistency across the network?

- A. By enforcing uniform configurations on all network devices
- B. By adjusting the color-coding of cables in the data center
- C. By randomly assigning system IDs to devices
- D. By assigning different agents to devices based on their location

**Answer: A**

#### NEW QUESTION # 52

Multitenancy for applications is achieved by creating virtual networks (VNs) within which construct?

- A. connectivity template
- B. routing table
- C. routing zone
- D. security policy

**Answer: C**

Explanation:

A routing zone is an L3 domain, the unit of tenancy in multi-tenant networks. You create routing zones for tenants to isolate their IP traffic from one another, thus enabling tenants to re-use IP subnets. In addition to being in its own VRF, each routing zone can be assigned its own DHCP relay server and external system connections. You can create one or more virtual networks within a routing zone, which means a tenant can stretch its L2 applications across multiple racks within its routing zone.

#### NEW QUESTION # 53

Which statement about Juniper Apstra role-based access control is correct?

- A. The viewer role is predefined and can be deleted.
- **B. The administrator role can see all permissions.**
- C. The administrator role is the only predefined role.
- D. The user role can create roles.

**Answer: B**

Explanation:

Juniper Apstra role-based access control (RBAC) is a feature that allows you to specify access permissions for different users based on their roles. RBAC servers are remote network servers that authenticate and authorize network access based on roles assigned to individual users within an enterprise. Juniper Apstra has four predefined user roles: administrator, device\_ztp, user, and viewer. The administrator role is the most powerful role, and it can see all permissions and perform all actions in the Apstra software application. The administrator role can also create, clone, edit, and delete user roles, except for the four predefined user roles, which cannot be modified. Therefore, the statement that the administrator role can see all permissions is correct.

## NEW QUESTION # 54

.....

The development and progress of human civilization cannot be separated from the power of knowledge. You must learn practical knowledge to better adapt to the needs of social development. Now, our JN0-481 learning prep can meet your requirements. You will have good command knowledge with the help of our study materials. The certificate is of great value in the job market. Our JN0-481 learning prep can exactly match your requirements and help you pass exams and obtain certificates. As you can see, our products are very popular in the market. Time and tides wait for no people. Take your satisfied JN0-481 Actual Test guide and start your new learning journey. After learning our learning materials, you will benefit a lot. Being brave to try new things, you will gain meaningful knowledge.
