

# Latest dbt-Analytics-Engineering Test Questions - dbt-Analytics-Engineering Reliable Exam Registration

There are a lot of excellent experts and professors in our company. The high quality of the dbt-Analytics-Engineering reference guide from our company resulted from their constant practice. After a long period of research and development, our dbt-Analytics-Engineering test questions have been the leader study materials in the field. We have taken our customers' suggestions of the dbt-Analytics-Engineering Exam Prep seriously, we have tried our best to perfect the dbt-Analytics-Engineering reference guide from our company just in order to meet the need of these customers well. So stop hesitation and buy our dbt-Analytics-Engineering study materials.

To get better condition of life, we all need impeccable credentials of different exams to prove individual's capacity. However, weak dbt-Analytics-Engineering practice materials may descend and impair your ability and flunk you in the real exam unfortunately. And the worst condition is all that work you have paid may go down the drain for those dbt-Analytics-Engineering question torrent lack commitments and resolves to help customers. The practice materials of the exam with low quality may complicate matters of the real practice exam. So, you must know about our dbt-Analytics-Engineering question torrent.

## Hot Latest dbt-Analytics-Engineering Test Questions | Efficient dbt Labs dbt-Analytics-Engineering: dbt Analytics Engineering Certification Exam 100% Pass

Experts have prepared the dbt-Analytics-Engineering desktop-based exam simulation software. There are dbt-Analytics-Engineering actual questions in the practice test to give you an exact impression of the dbt Analytics Engineering Certification Exam dbt-Analytics-Engineering original test. This type of dbt Analytics Engineering Certification Exam dbt-Analytics-Engineering actual exam simulations helps to calm your anxiety.

## dbt Labs dbt Analytics Engineering Certification Exam Sample Questions (Q26-Q31):

NEW QUESTION # 26

Examine how freshness is defined at the database level:

- name: raw

database: raw

freshness: # default freshness

warn\_after: {count: 12, period: hour}

error\_after: {count: 24, period: hour}

loaded\_at\_field: \_etl\_loaded\_at

How can one table from the source raw be excluded from source freshness?

- A. Add error\_after: null to the table configuration.
- B. Since freshness is defined at the source level, all tables in the source must adhere to the freshness parameters.
- **C. Add freshness: null to the table configuration.**
- D. Add loaded\_at\_field: null to the table configuration.

**Answer: C**

Explanation:

In dbt, source freshness can be defined at the source level (affecting all tables) or overridden at the individual table level. When freshness is declared at the source root, dbt applies the freshness policy to every table within that source unless a specific table opts out. The official dbt documentation states that setting:

freshness: null

at the table level disables freshness checks for that specific table, even when the source itself defines default freshness rules. This is the only documented way to exclude an individual table from a source freshness policy.

Option B is incorrect because tables can override and disable freshness even when the parent source defines it. dbt's configuration hierarchy supports overriding child-level settings on a per-resource basis.

Option C (loaded\_at\_field: null) does not disable freshness-it simply removes the loaded\_at\_field, which would cause dbt to error because a freshness check requires a timestamp field to operate.

Option D (error\_after: null) only removes the error threshold but does not disable freshness. The table would still participate in freshness checks and could trigger warnings.

Thus, the correct and dbt-supported method to exclude a table from freshness is to explicitly set:

freshness: null

making A the correct answer.

## NEW QUESTION # 27

 **TestkingPass**

59. When a dbt project is stored in a git repository, a developer wanting to add new models to the dbt project starts by creating a new \_\_\_\_\_.

pull request  
branch  
commit  
repository

Once created, the developer can then modify the code of the project and \_\_\_\_\_ those changes so that they are saved in git.

commit  
push  
checkout  
pull

Once all the required logic has been added, the developer can create a \_\_\_\_\_ to have the code go through Continuous Integration and allow manual review.

push request  
clone  
merge request  
remote  
pull request  
checkout

**Answer:**

**Explanation:**

59. When a dbt project is stored in a git repository, a developer wanting to add new models to the dbt project starts by creating a new

pull request  
branch  
commit  
repository

Once created, the developer can then modify the code of the project and those changes so that they are saved in git.

commit  
push  
checkout  
pull

Once all the required logic has been added, the developer can create a

push request  
clone  
merge request  
remote  
pull request  
checkout

TestkingPass

**Explanation:**

(branch)

(commit)

(pull request)

In dbt development workflows, version control using Git is essential for ensuring collaborative, safe, and trackable changes to analytics code. The correct first step when making updates-such as adding new models-is to create a new Git branch. This isolates development work from the production (main) branch, preventing incomplete or experimental logic from affecting deployed transformations. Branching supports dbt's modular development approach and aligns with best practices for analytics engineering. Once the branch is created, the developer modifies SQL models, tests, macros, or documentation as required.

To permanently record these modifications in Git, the developer must commit the changes. A commit serves as a snapshot of progress and creates an auditable history of transformations made to the project, enabling rollbacks, diffs, and peer review.

After development is complete, the developer submits a pull request (PR). The pull request triggers CI checks-often including dbt build, schema tests, and contract validations-to ensure code quality and identify impacts on downstream models. PRs allow team members to review and comment before changes merge into the main branch, enforcing governance, consistency, and reliability. This workflow embodies the engineering rigor dbt encourages: modular development, testing, versioning, and peer review.

#### NEW QUESTION # 28

You wrote this test against your `fact_orders` model to confirm status filters were properly applied by a parent model:

```
{{
  config(
    enabled=true,
    severity='error'
  )
}}
select *
from {{ ref('fact_orders') }}
where status_code = 13
```

Which statement about this test is true?

- A. You must attach the test to the model in orders.yml for it to run.
- **B. Records with status\_code = 13 will cause this test to fail.**
- C. This test will warn instead of erroring when you use the --warn-error flag.
- D. The file must be saved in the tests/generic directory.

**Answer: B**

Explanation:

This test is a singular test, meaning it is defined as a standalone SQL file placed inside the /tests directory (not attached through YAML like generic tests). dbt executes singular tests by running the SQL query, and the test fails if the query returns any rows. In this case, the test selects all records from fct\_orders where status\_code = 13. That means if even one row in fct\_orders has a status code of 13, the test will fail, because dbt interprets returned rows as evidence of a data-quality issue.

The configuration block at the top sets severity='error', meaning the test raises an error when it fails, rather than a warning. This setting overrides default severity behavior, so option B is incorrect. Singular tests do not need to be attached in YAML because they run automatically when placed under /tests # making option A incorrect. Meanwhile, generic tests live in /tests/generic, but singular tests should live directly under /tests (option C incorrect).

Therefore, the only correct statement is that records with status\_code = 13 will cause the test to fail, because the test query is explicitly written to identify such rows.

### NEW QUESTION # 29

Consider this DAG for a dbt project. You have configured your environment to use one thread. When running dbt run, you determine that model\_d fails to materialize.

How will changing the command from dbt run to dbt run --fail-fast impact the execution of dbt run when model\_d fails to materialize? Choose 1 option.

Options:

- A. dbt will drop the existing version of model\_d in the data platform.
- B. dbt will attempt to materialize the rest of the models.
- **C. dbt will stop building any additional nodes in the DAG.**
- D. dbt will attempt to materialize everything else except for model\_f.

**Answer: C**

Explanation:

The --fail-fast flag changes dbt's execution behavior by immediately stopping the scheduling of any further models as soon as the first failure occurs. This is true regardless of the number of threads; in this case, the environment uses one thread, meaning models run strictly in sequence based on dependency order.

In the DAG provided, model\_d is downstream of model\_b, and model\_f depends on model\_d. The execution sequence when using a single thread would be something like:

- \* model\_a runs
- \* model\_c runs
- \* model\_e runs
- \* model\_b runs
- \* model\_d runs # fails

Once model\_d fails:

\* With normal dbt run, dbt would attempt to continue running any unrelated models (though in this DAG, there are no more independent nodes left anyway).

\* With --fail-fast, dbt immediately stops scheduling any additional work, halting the run.

Therefore, no further models-including model\_f or any other-will run. dbt does not drop models, retry them, or attempt related branches. It simply stops.

### NEW QUESTION # 30

Your model has a contract on it.

When renaming a field, you get this error:

This model has an enforced contract that failed.

Please ensure the name, data\_type, and number of columns in your contract match the columns in your model's definition.

column_name	definition_type	contract_type	mismatch_reason
ORDER_ID	TEXT	TEXT	missing in definition
ORDER_KEY	TEXT		missing in contract

Which two will fix the error? Choose 2 options.

- A. Add order\_key to the contract.
- B. Remove order\_id from the contract.
- C. Remove order\_id from the model SQL.
- D. Remove order\_key from the contract.
- E. Add order\_key to the model SQL.

**Answer: A,B**

Explanation:

dbt model contracts enforce that the column names, data types, and number of columns defined in the contract exactly match the columns produced by the compiled SQL. If any column appears in one location (the contract or the SQL) but not in the other, dbt raises an enforcement error.

In this scenario, the error message shows:

\* ORDER\_ID is missing in the model definition, meaning the SQL no longer contains a column named order\_id, but the contract still expects it.

\* ORDER\_KEY is missing in the contract, meaning the model SQL now contains a new column, but this column has not been added to the contract.

To fix the mismatch, you must remove columns from the contract that no longer exist in the SQL and add to the contract any new columns that now appear in the SQL.

Therefore:

\* Option A - Remove order\_id from the contract - is correct because the column no longer exists in the model SQL.

\* Option D - Add order\_key to the contract - is correct because the SQL now produces this column.

Options B and C incorrectly alter the wrong side of the definition, and Option E would create a mismatch in the opposite direction.

Thus, the correct fixes are A and D.

### NEW QUESTION # 31

.....

We have three formats of study materials for your leaning as convenient as possible. Our dbt-Analytics-Engineeringquestion torrent can simulate the real operation test environment to help you pass this test. You just need to choose suitable version of our dbt-Analytics-Engineering guide question you want, fill right email then pay by credit card. It only needs several minutes later that you will receive products via email. After your purchase, 7\*24\*365 Day Online Intimate Service of dbt-Analytics-Engineering question torrent is waiting for you. We believe that you don't encounter failures anytime you want to learn our dbt-Analytics-Engineering guide torrent.
