Latest Google Associate-Cloud-Engineer Test Format - Latest Associate-Cloud-Engineer Exam Price

What's more, part of that Exams4sures Associate-Cloud-Engineer dumps now are free: https://drive.google.com/open?id=1WHaj5wvPW5r5fvmaIaTDJm_f6WDiYALV

After the user has purchased our Associate-Cloud-Engineer learning materials, we will discover in the course of use that our product design is extremely scientific and reasonable. Details determine success or failure, so our every detail is strictly controlled. For example, our learning material's Windows Software page is clearly, our Associate-Cloud-Engineer Learning material interface is simple and beautiful. There are no additional ads to disturb the user to use the Google Associate Cloud Engineer Exam qualification question. Once you have submitted your practice time, Associate-Cloud-Engineer study tool system will automatically complete your operation.

Google Associate-Cloud-Engineer Certification can open up many opportunities for IT professionals. It can act as a stepping stone for individuals who want to pursue higher-level certifications such as the Professional Cloud Architect or the Professional Data Engineer. Google Associate Cloud Engineer Exam certification can also help individuals gain recognition in the cloud computing industry, increase their earning potential, and enhance their job prospects.

Get Google Associate-Cloud-Engineer Dumps For Quick Study [2025]

We have three versions packages of the Associate-Cloud-Engineer exam questions to help you comprehensively. Also, all contents are carefully prepared by our researchers. So you needn't to read and memorize the boring reference books of the Associate-Cloud-Engineer Exam. Most people have successfully passed the exam under the assistance of our study materials. So try to trust us. Our Associate-Cloud-Engineer study materials will help you generate a wonderful life.

Below are the requirements of Associate Cloud Engineer Exam

There is no prerequisite for Oracle Associate Cloud Engineer certification.

Google Associate-Cloud-Engineer Certification Exam is a popular certification that validates your expertise in designing, deploying, and managing applications on Google Cloud Platform (GCP). Google Associate Cloud Engineer Exam certification is designed to test your proficiency in various GCP services, including compute, storage, networking, security, and application development. Associate-Cloud-Engineer Exam is intended for individuals who have experience working with GCP and want to become certified professionals.

Google Associate Cloud Engineer Exam Sample Questions (Q270-Q275):

NEW QUESTION # 270
Your company has workloads running on Compute Engine and on-premises. The Google Cloud Virtual Private Cloud (VPC) is connected to your WAN over a Virtual Private Network (VPN). You need to deploy a new Compute Engine instance and ensure that no public Internet traffic can be routed to it. What should you do?

- A. Create a deny-all egress firewall rule on the VPC network.
- B. Create the instance without a public IP address.
- C. Create the instance with Private Google Access enabled.
- D. Create a route on the VPC to route all traffic to the instance over the VPN tunnel.

Answer: B

Explanation:
Private Google Access allows access to the external IP addresses. which is against the requirements.

NEW QUESTION # 271

You want to run a single caching HTTP reverse proxy on GCP for a latency-sensitive website.
This specific reverse proxy consumes almost no CPU.
You want to have a 30-GB in-memory cache, and need an additional 2 GB of memory for the rest of the processes.
You want to minimize cost. How should you run this reverse proxy?

- A. Run it on Compute Engine, and choose a custom instance type with 6 vCPUs and 32 GB of memory.
- B. Package it in a container image, and run it on Kubernetes Engine, using n1-standard-32 instances as nodes.
- C. Create a Cloud Memorystore for Redis instance with 32-GB capacity.
- D. Run it on Compute Engine, choose the instance type n1-standard-1, and add an SSD persistent disk of 32 GB.

Answer: C

Explanation:
What is Google Cloud Memorystore?
Overview. Cloud Memorystore for Redis is a fully managed Redis service for Google Cloud Platform.
Applications running on Google Cloud Platform can achieve extreme performance by leveraging the highly scalable, highly available, and secure Redis service without the burden of managing complex Redis deployments.

NEW QUESTION # 272

Your existing application running in Google Kubernetes Engine (GKE) consists of multiple pods running on four GKE n1-standard-2 nodes. You need to deploy additional pods requiring n2-highmem-16 nodes without any downtime. What should you do?

- A. Create a new Node Pool and specify machine type n2-highmem-16. Deploy the new pods.
- B. Create a new cluster with both n1-standard-2 and n2-highmem-16 nodes. Redeploy the pods and delete the old cluster.
- C. Create a new cluster with n2-highmem-16 nodes. Redeploy the pods and delete the old cluster.
- D. Use gcloud container clusters upgrade. Deploy the new services.

Answer: A

NEW QUESTION # 273

You are building a new version of an application hosted in an App Engine environment. You want to test the new version with 1% of users before you completely switch your application over to the new version. What should you do?

- A. Deploy a new version of your application in App Engine. Then go to App Engine settings in GCP Console and split traffic between the current version and newly deployed versions accordingly.
- B. Deploy a new version as a separate app in App Engine. Then configure App Engine using GCP Console to split traffic between the two apps.
- C. Deploy a new version of your application in Google Kubernetes Engine instead of App Engine and then use GCP Console to split traffic.
- D. Deploy a new version of your application in a Compute Engine instance instead of App Engine and then use GCP Console to split traffic.

Answer: A

Explanation:
GCP App Engine natively offers traffic splitting functionality between versions. You can use traffic splitting to specify a percentage distribution of traffic across two or more of the versions within a service. Splitting traffic allows you to conduct A/B testing between

your versions and provides control over the pace when rolling out features.
Ref: https://cloud.google.com/appengine/docs/standard/python/splitting-traffic

NEW QUESTION # 274

Every employee of your company has a Google account. Your operational team needs to manage a large number of instances on Compute Engine. Each member of this team needs only administrative access to the servers. Your security team wants to ensure that the deployment of credentials is operationally efficient and must be able to determine who accessed a given instance. What should you do?

- A. Generate a new SSH key pair. Give the private key to each member of your team. Configure the public key as a project-wide public SSH key in your Cloud Platform project and allow project-wide public SSH keys on each instance. https://cloud.google.com/compute/docs/instances/managing-instance-access
- B. Ask each member of the team to generate a new SSH key pair and to add the public key to their Google account. Grant the "compute.osAdminLogin" role to the Google group corresponding to this team.
- C. Generate a new SSH key pair. Give the private key to each member of your team. Configure the public key in the metadata of each instance.
- D. Ask each member of the team to generate a new SSH key pair and to send you their public key. Use a configuration management tool to deploy those keys on each instance.

Answer: B

NEW QUESTION # 275
