NEW QUESTION # 67

Which of the following statements are TRUE about fixed ports and cards of AR routers?

- **A. On some models, WAN ports can be switched to LAN ports.**

- B. All Layer 2 cards support LAN/WAN switching.
- C. LAN ports can be switched to WAN ports using the `undo portswitch` command.
- D. Layer 2 cards configured with VLANIF interfaces support simple Layer 3 forwarding, but do not support NAT, MPLS, IPsec, and HQoS.

Answer: A,C,D

Explanation:

Huawei's AR routers offer flexible configurations for fixed ports and modular cards, enabling them to adapt to various networking scenarios. Key points include:

LAN-to-WAN switching: LAN ports can be converted to WAN ports using the `undo portswitch` command, allowing greater flexibility in network design.

WAN-to-LAN switching: Some AR router models support converting WAN ports to LAN ports, depending on the hardware and software capabilities.

Layer 2 card limitations: Layer 2 cards configured with VLANIF interfaces can perform basic Layer 3 forwarding but lack advanced features like NAT, MPLS, IPsec, and HQoS.

The claim that all Layer 2 cards support LAN/WAN switching is incorrect. Only specific models and configurations support this functionality, making option D false.
