## HPE0-J68 Sample Exam | New Study HPE0-J68 Questions

Nowadays, we live so busy every day. Especially for some businessmen who want to pass the HPE0-J68 exam and get related certification, time is vital importance for them, they may don't have enough time to prepare for their exam. Some of them may give it up. After so many years' development, our HPE0-J68 exam torrent is absolutely the most excellent than other competitors, the content of it is more complete, the language of it is more simply. Believing in our HPE0-J68 Guide tests will help you get the certificate and embrace a bright future. Time and tide wait for no man. Come to buy our test engine.

### HPE Storage Solutions Sample Questions (Q27-Q32):

#### NEW QUESTION # 27

A solution architect is explaining RBAC concepts behind the HPE GreenLake Platform. How can the customer manage users in HPE GreenLake Platform after creating new company account?

- A. HPE Support must be used to create an administrator account for the organization.
- B. Single company can only have one account.
- C. The creator of the company account must create another account with Account Administrator role.
- D. The creator of the company account is automatically assigned to the Account Administrator role for the organization.

**Answer: D**

Explanation:

In the HPE GreenLake Platform, when a new company account is created, the individual who creates the account is automatically assigned the Account Administrator role. This role grants them the ability to manage users, assign roles, and control access within the HPE GreenLake environment, ensuring that they have full administrative control over the account from the outset.

### NEW QUESTION # 28

Which actions can be done within InfoSight Cross-Stack Analytics for VMware and Hyper-V?  
(Choose two.)

- A. View replication policies
- B. Review backup schedules
- C. Modify administrative privileges
- D. Locate inactive VMs
- E. Find noisy neighbors

**Answer: D,E**

### NEW QUESTION # 29

A solution architect is sizing the required capacity for an HPE Alletra 9000. Customer requirements include:

- \* 100TB base volumes
- \* 168 snapshots a week
- \* 15% daily change rate

How much capacity is needed for snapshots after one week?

- A. 105TB
- B. 1680TB
- C. 15TB
- D. 700TB

**Answer: A**

Explanation:

To calculate the required capacity for snapshots after one week for an HPE Alletra 9000, we start by understanding the customer's requirements:

- \* Base volume size: 100TB
- \* Snapshots: 168 snapshots per week
- \* Daily change rate: 15%

The snapshot capacity requirement can be calculated by taking 15% of the base volume size per day, and multiplying it by the number of days (7 days in a week) and the number of snapshots per day.

Daily change: 15% of 100TB = 15TB  
Total change over a week: 15TB \* 7 days = 105TB  
Thus, the capacity needed for snapshots after one week is 105TB.

### NEW QUESTION # 30

You are designing a new storage environment for a customer. They need good performance, but need to keep costs to a minimum. They have a very limited staff, and staff is concerned about learning new technologies. You plan to recommend a Nimble HF20 solution.

Which storage connectivity components should you recommend?

- A. FlexFabric switches, Nimble iSCSI card, FC adapters for servers
- B. Ethernet switches, Nimble FC card, dedicated FC for servers
- C. FC switches, Nimble FC card, FC adapters for servers
- D. Ethernet switches, Nimble iSCSI card, dedicated NICs for servers

**Answer: D**

### NEW QUESTION # 31

What performance benefit is provided by using the HPE StoreVirtual DSM for Microsoft MPIO instead of the standard MPIO?

- A. The storage system, which receives a copy of the data, does not service the write I/O.
- B. The iSCSI connections are blocked to non-critical nodes in the cluster by default.
- C. The storage system, which holds a copy of the requested data, services the read I/Os.
- D. The HPE DSM increases availability and reduces latency and throughput.

**Answer: C**

Explanation:

HPE StoreVirtual DSM for Microsoft MPIO (Multi-Path Input Output) enhances performance by ensuring that the storage system holding a copy of the requested data services the read I/Os. This capability allows the DSM to optimize I/O paths by directing read requests to the most appropriate node, reducing latency and improving throughput, as it ensures that the data is accessed from the nearest or least busy copy.
