100% Pass Quiz HP - HPE6-A78 - Authoritative Latest Aruba Certified Network Security Associate Exam Test Questions

One of the top features of HP HPE6-A78 exam dumps is the HPE6-A78 exam passing a money-back guarantee. In other words, your investments with PDFDumps Links to an external site. HP Aruba Certified Network Security Associate Exam exam questions are secured with the 100 Aruba Certified Network Security Associate Exam HPE6-A78 Exam passing a money-back guarantee. Due to any reason, if you did not succeed in the final HPE6-A78 exam despite using PDFDumps HPE6-A78 pdf questions and practice tests, we will return your whole payment without any deduction.

HP Aruba Certified Network Security Associate Exam Sample Questions (Q138-Q143):

NEW QUESTION # 138

What is a correct guideline for the management protocols that you should use on ArubaOS-Switches?

- A. Disable SSH and use https instead.
- B. Disable Telnet and use TFTP instead.
- C. Disable Telnet and use SSH instead
- D. Disable HTTPS and use SSH instead

Answer: A

NEW QUESTION # 139

Refer to the exhibit.

The screenshot shows the Aruba Mobility Controller configuration page. The 'Auth Servers' tab is active, displaying a table of server groups. The 'MyEmployees_dot1_svg' group is selected, and the 'Servers' sub-tab is also active, showing a single RADIUS server named 'clearpass' with IP address 10.5.5.5.

NAME	SERVICES	FAIL THROUGH	LOAD BALANCE	SERVICES
default	1	--	--	1
internal	1	--	--	1
MyEmployees_dot1_svg	1	--	--	0

NAME	TYPE	IP ADDRESS	TRIM FQDN	MATCH RULES
clearpass	RADIUS	10.5.5.5	--	0

You have set up a RADIUS server on an ArubaOS Mobility Controller (MC) when you created a WLAN named "MyEmployees". You now want to enable the MC to accept change of authorization (CoA) messages from this server for wireless sessions on this WLAN.

What is a part of the setup on the MC?

- A. Create a dynamic authorization, or RFC 3576, server with the 10.5.5.5 address and correct shared secret.
- B. Enable the dynamic authorization setting in the "clearpass" authentication server settings.
- C. Install the root CA associated with the 10.5.5.5 server's certificate as a Trusted CA certificate.
- D. Configure a ClearPass username and password in the MyEmployees AAA profile.

Answer: C

NEW QUESTION # 140

Refer to the exhibit.

What is another setting that you must configure on the switch to meet these requirements?

- A. Configure a CPPM username and password that match a CPPM admin account.
- B. Create port-access roles with the same names of the roles that CPPM will send in Aruba-Admin-Role VSAs.
- C. Set the aaa authentication login method for SSH to the "radius" server-group (with local as backup).
- D. Disable SSH on the default VRF and enable it on the mgmt VRF instead.

Answer: C

Explanation:

To meet the requirements for configuring an ArubaOS-CX switch for integration with ClearPass Policy Manager (CPPM), it is necessary to set the AAA authentication login method for SSH to use the "radius" server-group, with "local" as a backup. This ensures that when an admin attempts to SSH into the switch, the authentication request is first sent to CPPM via RADIUS. If CPPM is unavailable, the switch will fall back to using local authentication¹².

Here's why the other options are not correct:

Option B is incorrect because configuring a CPPM username and password on the switch that matches a CPPM admin account is not required for SSH login; rather, the switch needs to be configured to communicate with CPPM for authentication.

Option C is incorrect because while CPPM will send Aruba-Admin-Role Vendor-Specific Attributes (VSAs), the switch does not need to have port-access roles created with the same names; it needs to interpret the VSA to assign the correct role.

Option D is incorrect because disabling SSH on the default VRF and enabling it on the mgmt VRF is not related to the authentication process with CPPM.

Therefore, the correct answer is A, as setting the AAA authentication login method for SSH to the "radius" server-group with "local" as backup is a key step in ensuring that the switch can authenticate admins through CPPM while providing a fallback method¹².

NEW QUESTION # 141

What is a Key feature of the ArubaOS firewall?

- A. The firewall is designed to filter traffic primarily based on wireless 802.11 headers, making it ideal for mobility environments
- B. The firewall examines all traffic at Layer 2 through Layer 4 and uses source IP addresses as the primary way to determine how to control traffic.
- C. The firewall includes application layer gateways (ALGs), which it uses to filter Web traffic based on the reputation of the destination web site.
- D. The firewall is stateful which means that it can track client sessions and automatically allow return traffic for permitted sessions

Answer: D

Explanation:

The ArubaOS firewall is a stateful firewall, meaning that it can track the state of active sessions and can make decisions based on the context of the traffic. This stateful inspection capability allows it to automatically allow return traffic for sessions that it has permitted, thereby enabling seamless two-way communication for authorized users while maintaining the security posture of the network. References:

ArubaOS firewall documentation.

NEW QUESTION # 142

What are some functions of an ArubaOS user role?

- A. The role determines which firewall policies and bandwidth contracts apply to the client's traffic
- B. The role determines which control plane ACL rules apply to the client's traffic
- C. The role determines which wireless networks (SSIDs) a user is permitted to access
- D. The role determines which authentication methods the user must pass to gain network access

Answer: A

Explanation:

An ArubaOS user role determines the firewall policies and bandwidth contracts that apply to the client's traffic. When a user is authenticated, they are assigned a role, and this role has associated policies that govern network access rights, Quality of Service (QoS), Layer 2 forwarding, Layer 3 routing behaviors, and bandwidth contracts for users or devices.
