So rest assured that you will get top-notch and easy-to-use HPE Aruba Networking Switching Professional Exam (HPE7-A08) practice questions. The HPE7-A08 PDF dumps file is the PDF version of real HP HPE7-A08 exam questions that work with all devices and operating systems.

HPE Aruba Networking Switching Professional Exam Sample Questions (Q285-Q290):

NEW QUESTION # 285
A network administrator is implementing OSPF, where there are two exit points. Each exit point has a stateful, application inspection firewall to implement company policies.
What would the best practice be to ensure that one firewall will see both directions of the traffic, preventing asynchronous connections in the network?

- A. Both ASBRs should define External Type 1 routes for the external routes, using the same initial cost value for each ASBR.
- B. Both ASBRs should define External Type 2 routes for the external routes, using the same initial cost value for each ASBR.
- C. Both ASBRs should define External Type 1 routes for the external routes, using a different initial cost value for each ASBR.
- D. Both ASBRs should define External Type 2 routes for the external routes, using a different initial cost value for each ASBR.

Answer: C

NEW QUESTION # 286

You are about to make a change to the HPE Aruba Networking CX switch in HPE Aruba Networking Central and are encountering the condition displayed above. What needs to be done to make a change to the switch with multi-edit?

- A. Override state
- B. Select configuration status and enable edit config
- C. Select the device in multi-edit and enable edit config mode
- D. Enable edit config mode using the gear icon

Answer: D

Explanation:
To make configuration changes using multi-edit in Aruba Central when encountering the shown condition, you must enable edit config mode using the gear icon. This unlocks the configuration for editing and allows you to make batch changes safely.
Selecting configuration status or device in multi-edit is not sufficient.
Overriding state is not a standard approach in Aruba Central for editing configs.

NEW QUESTION # 287
Refer to the exhibit:

SW-A is the Layer 3 gateway for:
* Server-A in VLAN 100, subnet 10.100.100.0/24
* Client-A in VLAN 20, subnet 10.100.20.0/24

* Client-B in VLAN 30, subnet 10.100.30.0/24
What must be done to prevent rogue DHCP servers in VLAN 30 on SW-B?

- A. Enable snooping globally and on VLAN 30
- B. Enable dhcpv4-snooping globally and on interface VLAN 30
- C. Enable dhcpv4-snooping trust 10.100.100.10 on VLAN 30
- D. Enable dhcpv4-snooping authorized-server 10.100.100.10 on VLAN 30

Answer: D

Explanation:
To prevent rogue DHCP servers in a VLAN, DHCP snooping authorized-server commands are used to specify trusted DHCP servers allowed to respond.
Option A (dhcpv4-snooping trust 10.100.100.10) configures a trusted port, but it is not VLAN specific and not precise enough for this purpose.
Enabling DHCP snooping globally and on VLAN or interface (Options C and D) are prerequisites but do not prevent rogue servers unless authorized servers are defined.
Option B correctly enables an authorized DHCP server IP on VLAN 30, blocking unauthorized DHCP responses.

NEW QUESTION # 288
Which feature enables a switch to automatically detect configuration drifts and restore previous settings?
Response:

- A. Configuration auditing
- B. STP Guard
- C. NetEdit Auto-Rollback
- D. VLAN auto-trunking

Answer: C

NEW QUESTION # 289
Which CLI command removes an incorrectly assigned MTU setting from an interface?

- A. no mtu
- B. delete max transmission unit
- C. clear mtu value
- D. unset mtu

Answer: A

Explanation:
The no mtu command removes a manually set MTU value, ensuring the default MTU is applied, reducing fragmentation-related performance issues.

NEW QUESTION # 290
......

refund.
