

Latest HPE7-J02 Valid Test Questions Supply you Valid Latest Exam Duration for HPE7-J02: Advanced HPE Storage Integrator Solutions Written Exam to Study easily

P.S. Free & New HPE7-J02 dumps are available on Google Drive shared by ValidTorrent: <https://drive.google.com/open?id=1P8f9-2AHZMpSRRWKeyocI-YhjgKx86FG>

For candidates who are going to attend the exam, the right HPE7-J02 study materials are really important, since it will decide whether you will pass the exam or not. HPE7-J02 exam dumps are high-quality, and it will improve your professional ability in the process of learning, since it contains many knowledge points. Besides, about the privacy, we respect the private information of you. We won't send you junk email. Once you have paid for the HPE7-J02 study materials, we will send you the downloading link in ten minutes. You can start your learning immediately.

With both HPE7-J02 exam practice test software you can understand the Advanced HPE Storage Integrator Solutions Written Exam (HPE7-J02) exam format and polish your exam time management skills. Having experience with HPE7-J02 exam dumps environment and structure of exam questions greatly help you to perform well in the final HPE7-J02 Exam. The desktop practice test software is supported by Windows. Our web-based practice exam is compatible with all browsers and operating systems.

Get HP HPE7-J02 Dumps for Amazing Results in HP Exam

ValidTorrent HPE7-J02 exam braindumps is valid and cost-effective, which is the right resource you are looking for. What you get from the HPE7-J02 practice torrent is not only just passing with high scores, but also enlarging your perspective and enriching your future. From the HPE7-J02 free demo, you will have an overview about the complete exam dumps. The comprehensive questions together with correct answers are the guarantee for 100% pass.

HP Advanced HPE Storage Integrator Solutions Written Exam Sample Questions (Q40-Q45):

NEW QUESTION # 40

Your customer is deploying HPE Morpheus Enterprise Software as a single orchestration platform for compute and storage resources. To achieve a high-availability deployment in a single site, how many VMs must be deployed if distributed databases are not required?

- A. 3 VMs
- B. 1 VM
- C. 1 VM with VMware HA and DRS active
- D. 4 VMs with distributed database setup

Answer: A

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

HPE Morpheus can run as a single VM in non-critical environments, but for high availability (HA) without distributed databases, the recommendation is to deploy 3 VMs in a cluster. This ensures quorum and redundancy across application nodes, protecting against single VM failure. Distributed database mode requires more VMs, but is not needed in this scenario.

Distractors:

A: 4 VMs are required only if distributed DB is enabled (PostgreSQL cluster), not here.

B/D: A single VM (with or without VMware HA) doesn't provide native Morpheus HA resilience.

Key Concept: Morpheus HA = 3-node cluster minimum without distributed DB.

Reference: HPE Morpheus Deployment and Architecture Guide.

NEW QUESTION # 41

A growing technology company is planning to upgrade its data center infrastructure. Their considerations:

Budget: Predictable monthly payments, no upfront CapEx.

Flexibility: Long-term use, no forced returns.

Ownership: Prefer eventual ownership, spread payments.

Control: Full customization and upgrades.

Which procurement option best meets their needs?

- A. Consumption based
- B. Operating lease
- **C. Capital lease**
- D. Capital purchase

Answer: C

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

A Capital Lease (also known as a finance lease) spreads costs over time like OpEx, while giving the customer the ability to own the equipment at the end of the lease term. This matches the desire for predictable payments, eventual ownership, and full control.

Distractors:

A (Consumption model): GreenLake provides OpEx flexibility but does not lead to ownership.

B (Operating lease): Pure rental; equipment must be returned, no ownership.

C (Capital purchase): Requires large upfront payment, which the customer wants to avoid.

Key Concept: Capital Lease = predictable payments + ownership path.

Reference: HPE Financial Services Procurement Options.

NEW QUESTION # 42

Refer to the exhibit.

The array is experiencing frequent cache misses for read operations. Which action plan would you suggest to correct the issue?

- A. Upgrade the controllers to Alletra 5050 models.
- **B. Increase the flash to disk ratio.**
- C. Increase the pinned cache size.
- D. Upgrade the setup with additional expansion shelf.

Answer: B

Explanation:

Detailed Explanation:

Rationale for Correct answer:

Frequent cache misses occur when the working dataset does not fit effectively in cache. Increasing the flash-to-disk ratio ensures a higher portion of hot data is served from flash media rather than backend disk, reducing cache miss penalties. This is the standard HPE recommendation for read-intensive workloads where cache is insufficient.

Distractors:

A: Adding shelves adds capacity, not cache-to-data efficiency.

B: Upgrading controllers increases CPU, but not necessarily cache efficiency.

C: Pinned cache is intended for metadata or specific workloads, not large-scale read caching.

Key Concept: Flash-to-disk ratio optimization reduces cache misses.

Reference: HPE Alletra Performance Sizing Guide.

NEW QUESTION # 43

You are troubleshooting a storage environment using HPE Alletra Storage MP B10000 in a Peer Persistence configuration. A customer reports high latency when accessing data from applications.

When reviewing the MPIO path status on the host, what should be the path status for connections to the storage array located in the remote data center?

- A. Active Optimized
- **B. Active Non-optimized**
- C. Standby
- D. Passive

Answer: B

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

In an HPE Peer Persistence configuration (supported on HPE Alletra MP, Primera, and 3PAR), hosts see volumes presented from arrays at both sites. For optimal load balancing and transparent failover, the local array paths are shown as "Active Optimized" while the remote array paths are marked "Active Non-optimized". The "Non-optimized" label indicates these paths are functional but involve remote access with higher latency. This design ensures automatic transparent failover if the local site becomes unavailable.

Distractors:

A: "Active Optimized" applies only to local array paths, not remote ones.

B: Passive paths are typical of ALUA implementations without Peer Persistence, not here.

D: "Standby" is not the term used in Peer Persistence multipathing.

Key Concept: MPIO with Peer Persistence (ALUA Active/Active configuration).

Reference: HPE Primera/Alletra Peer Persistence Best Practices Guide.

NEW QUESTION # 44

Two HPE Storage Alletra MP B10000 arrays are deployed with Active Peer Persistence. Both arrays and hosts are installed in close proximity to each other. To enable symmetric access, Peer Persistence must be configured accordingly.

Which Host Proximity Parameter should be selected for host ESX31 in this case?

- A. Primary
- B. Exclusive
- C. Secondary
- **D. All**

Answer: D

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

Option B (All) is correct because in an Active Peer Persistence deployment where both arrays and hosts are in close proximity (metro or campus cluster scenario), the hosts should be configured with Host Proximity = All. This ensures that the host (ESX31) can access both arrays symmetrically and concurrently, enabling active-active paths. This is essential to deliver seamless failover and load balancing across the arrays in an HPE Alletra MP Peer Persistence environment.

Analysis of Incorrect Options (Distractors):

A (Secondary): This is used for hosts located closer to the secondary array, to bias access toward it in asymmetric deployments.

Not applicable here since the hosts are near both arrays.

C (Exclusive): This option assigns the host to a single array exclusively, preventing dual-active access.

This would defeat the purpose of symmetric Peer Persistence.

D (Primary): Similar to Secondary, this biases access to only the primary array, which is not correct when arrays and hosts are in the same site for active-active.

Key Concept:

This question focuses on Host Proximity parameters in HPE Peer Persistence.

Primary/Secondary = asymmetric designs (hosts closer to one array).

All = symmetric design (hosts equidistant to both arrays, enabling active-active).

Exclusive = restricts access to one array only.
