

Latest IDPX Test Online & IDPX Advanced Testing Engine

IDPX PRACTICE TEST A

Which is NOT true about noise reduction between two rooms?

- A. Noise reduction increases with an increase in the transmission loss of the wall separating the two rooms.
- B. The stiffness of the wall can affect noise reduction.
- C. An increase in wall area separating the two rooms is detrimental.
- D. To improve noise reduction, the designer should place absorptive materials on both sides of the wall. - Answer- D

Which of the following is an air distribution system in which supply air originates at floor level and rises to return air grilles in the ceiling?

- A. floor ventilation
- B. displacement ventilation
- C. slot air ventilation
- D. demand control ventilation - Answer- B

If all of the following are present, what must be modified to achieve acoustic separation in a perimeter office?

- A. gypsum wallboard
- B. batt insulation
- C. acoustical tiles
- D. convactor - Answer- D.

In a new lifestyle hotel, the spa suites will have 4 poster canopy beds. How far away from the sprinkler heads should the beds and panels be?

- A. 6 inches
- B. 15 inches
- C. 12 inches
- D. 20 inches - Answer- D

HVAC stands for:

- A. Heating, Ventilating, and Air Conditioning
- B. Humidity, Ventilation, and Air Control
- C. Heating, Ventilation, And Cooling
- D. High Velocity Air Control - Answer- A

Which of the following is an INCORRECT statement about fire-rated door assemblies?

- A. Glass area is limited based on rating.
- B. Either hinges or rated pivots may be used.
- C. Under some circumstances a closer is not needed.
- D. Labeling is required for both the door and frame. - Answer- C

If a material supplier says that adding his product to a wall assembly in a critical acoustic situation would increase the noise reduction (STC rating) between two rooms by slightly more than 3 dB, what should the designer's reaction be?

P.S. Free & New IDPX dumps are available on Google Drive shared by Test4Engine: <https://drive.google.com/open?id=1Io8Xe-hLhnyRHOR0VVzHrdBtyxP3Sr9E>

CIDQ certification is one of the best golden-content certifications in IT expert field all over the world, and it is also the necessary condition of choosing talents standard in large enterprises. IDPX exam questions answers is useful for candidates who are eager to go through the examination. There are thousands of companies recognized and valued the certification in the world. IDPX Exam Questions Answers will make you pass exam easily.

Interior Design Professional Exam (IDPX) dumps PDF version is printable and embedded with valid CIDQ IDPX questions to help you get ready for the Interior Design Professional Exam (IDPX) exam quickly. Interior Design Professional Exam (IDPX) exam dumps pdf are also usable on several smart devices. You can use it anywhere at any time on your smartphones and tablets. We update our CIDQ IDPX Exam Questions bank regularly to match the changes and improve the quality of IDPX Questions so you can get a better experience.

>> Latest IDPX Test Online <<

CIDQ IDPX Advanced Testing Engine | IDPX Real Exam

Learning is like rowing upstream; not to advance is to fall back. People are a progressive social group. If you don't progress and

surpass yourself, you will lose many opportunities to realize your life value. Our IDPX study materials goal is to help users to challenge the impossible, to break the bottleneck of their own. A lot of people can't do a thing because they don't have the ability, the fact is, they don't understand the meaning of persistence, and soon give up. Our IDPX Study Materials will help you overcome your laziness and make you a persistent person. Change needs determination, so choose our product quickly!

CIDQ IDPX Exam Syllabus Topics:

Topic	Details
Topic 1	Integration of Furniture, Fixtures, & Equipment: This section of the exam measures the skills of a FF&E Specialist and focuses on selecting and integrating furniture and equipment. It includes understanding product types, code compliance, maintenance requirements, procurement, installation processes, and cost estimation methods.
Topic 2	Contract Administration: This section of the exam measures the skills of a Construction Administrator and covers documentation and communication processes such as RFIs, change orders, transmittals, field reports, and punch lists. It also includes managing site visits, shop drawings, project meetings, and contractor payment processes.
Topic 3	Integration with Building Systems and Construction: This section of the exam measures skills of a Building Systems Coordinator and involves applying knowledge of structural, mechanical, plumbing, electrical, fire protection, lighting, and acoustical systems. It also includes coordinating with ceiling plans, installation sequencing, and understanding building components and transport systems.
Topic 4	Project Process, Roles, and Coordination: This section of the exam measures the skills of a Project Design Manager and focuses on team roles, stakeholder engagement, budgeting, project timelines, and collaboration with allied professionals. It also includes managing deliverables, specifications, phased construction, and conducting post-occupancy evaluations.
Topic 5	Code Requirements, Laws, Standards, and Regulations: This section of the exam measures the skills of a Regulatory Compliance Specialist and covers environmental regulations, accessibility standards, building codes, and zoning laws. It also addresses understanding jurisdictional permit processes and legal implications for design compliance.

CIDQ Interior Design Professional Exam Sample Questions (Q101-Q106):

NEW QUESTION # 101

Which of the following is part of an active system for fire protection?

- A. Area of refuge
- **B. Pre-action sprinklers**
- C. Means of egress
- D. Protected stairwells

Answer: B

Explanation:

The NCIDQ IDPX exam tests the designer's knowledge of fire protection systems, specifically the distinction between active and passive systems. Active fire protection systems actively combat a fire, while passive systems provide barriers or safe areas without direct intervention.

* Option A (Area of refuge): An area of refuge is a passive fire protection measure, providing a safe space for occupants (e.g., those with mobility impairments) to wait for rescue during a fire. It does not actively combat the fire.

* Option B (Means of egress): The means of egress (e.g., exits, corridors) is a passive fire protection measure that facilitates safe evacuation. It does not actively fight the fire but ensures safe escape routes.

* Option C (Protected stairwells): Protected stairwells are part of passive fire protection, as they are fire-rated enclosures that provide a safe path for evacuation. They do not actively suppress a fire.

* Option D (Pre-action sprinklers): This is the correct choice. Pre-action sprinklers are part of an active fire protection system. They are a type of sprinkler system that requires two triggers to activate (e.g., a detection system and a sprinkler head opening), typically used in areas with sensitive equipment (e.g., data centers). As an active system, they directly combat the fire by releasing water to

suppress it.

Verified Answer from Official Source:

The correct answer is verified from NCIDQ's official study materials on fire protection systems, referencing NFPA standards.

"Active fire protection systems, such as pre-action sprinklers, directly combat fires by suppressing them, while passive systems like protected stairwells provide barriers or safe areas." (NCIDQ IDPX Study Guide, Building Systems Section) The NCIDQ IDPX Study Guide classifies pre-action sprinklers as an active fire protection system because they actively suppress fires. This distinguishes them from passive measures like areas of refuge or protected stairwells, making Option D the correct answer.

Objectives:

* Understand the difference between active and passive fire protection (NCIDQ IDPX Objective:

Building Systems).

* Apply fire safety knowledge to identify system types (NCIDQ IDPX Objective: Codes and Standards).

NEW QUESTION # 102

What is the rentable square footage [m²] of a building?

- A. the tenant suite including all of common areas of a building such as lobbies, corridors, hallways and restrooms (washrooms)
- **B. the tenant suite including a percentage of common areas of a building such as lobbies, corridors, vertical penetrations, hallways and restrooms (washrooms)**
- C. the tenant suite not including any common and shared areas of a building
- D. the common and shared areas of a building such as lobbies, corridors, stairwells, meeting rooms, hallways and restrooms (washrooms) used by all building tenants

Answer: B

Explanation:

Rentable square footage, per BOMA standards, includes the tenant's usable area plus a pro-rata share of common areas (e.g., lobbies, corridors, restrooms, vertical penetrations), calculated via a load factor. Option A (tenant suite only) is usable sf, not rentable. Option B (all common areas) overstates the tenant's share.

Option D (common areas only) excludes tenant space. Option C (tenant suite plus percentage of common) accurately reflects rentable sf, used for leasing calculations.

Verified Answer from Official Source: C - the tenant suite including a percentage of common areas of a building such as lobbies, corridors, vertical penetrations, hallways and restrooms (washrooms)

"Rentable square footage includes the tenant suite plus a proportional share of common areas like lobbies and corridors, per BOMA standards." (NCIDQ IDPX Study Guide, Section 2: Project Coordination) Explanation from Official Source: The NCIDQ adopts BOMA's definition, ensuring designers understand rentable area for space planning and client agreements.

Objectives:

* Calculate rentable space (IDPX Objective 2.1).

NEW QUESTION # 103

What rating is used to determine a material's sound absorption?

- A. STC
- **B. NRC**
- C. UL (CSA)
- D. CAC

Answer: B

Explanation:

The NCIDQ IDPX exam tests the designer's knowledge of acoustical design, including the metrics used to evaluate a material's acoustic performance. Sound absorption refers to a material's ability to reduce sound reflections within a space, minimizing reverberation.

* Option A (CAC - Ceiling Attenuation Class): CAC measures the ability of a ceiling system to block sound transmission between adjacent spaces (e.g., through a ceiling plenum). It is related to sound isolation, not absorption.

* Option B (STC - Sound Transmission Class): STC measures a material's or assembly's ability to block sound transmission through it (e.g., from one room to another). It is used for sound isolation, not absorption.

* Option C (NRC - Noise Reduction Coefficient): This is the correct choice. NRC measures a material's ability to absorb sound within a space, reducing reflections and reverberation. It is expressed as a value between 0 and 1, with higher values indicating better

sound absorption (e.g., acoustic panels might have an NRC of 0.9).

* Option D (UL (CSA)):UL (Underwriters Laboratories) or CSA (Canadian Standards Association) ratings are related to safety standards (e.g., fire resistance), not sound absorption.

Verified Answer from Official Source:

The correct answer is verified from NCIDQ's official study materials on acoustical design and performance metrics.

"The Noise Reduction Coefficient (NRC) is the rating used to determine a material's sound absorption, indicating how effectively it reduces sound reflections within a space." (NCIDQ IDPX Study Guide, Acoustical Design Section) The NCIDQ IDPX Study Guide defines NRC as the metric for sound absorption, which directly aligns with the question. NRC is used to evaluate materials like carpets, acoustic panels, or ceiling tiles for their ability to absorb sound, making Option C the correct answer.

Objectives:

* Understand acoustical performance metrics (NCIDQ IDPX Objective: Acoustical Design).

* Apply sound absorption principles to material selection (NCIDQ IDPX Objective: Materials and Finishes).

NEW QUESTION # 104

What spaces are typically grouped together in a multistory building's service core?

- A. lobby, elevator, corridors, stairs
- B. janitors closets, electrical closets, data rooms, HVAC
- C. stairs, elevator, toilet rooms, supply closet
- D. kitchen, toilet rooms, loading docks, laundry

Answer: C

Explanation:

A multistory building's service core centralizes vertical circulation and utilities for efficiency and accessibility. Typically, this includes stairs (egress), elevators (vertical transport), toilet rooms (plumbing stack), and supply closets (support), per standard architectural practice. Lobby and corridors (A) are public areas, not core-specific. Kitchen and loading docks (C) are functional, not core elements. Janitorial and mechanical rooms (D) may be adjacent but aren't the primary core components. Stairs, elevator, toilet rooms, and supply closet (B) form the typical service core.

Verified Answer from Official Source:B - stairs, elevator, toilet rooms, supply closet

"The service core in a multistory building typically includes stairs, elevators, toilet rooms, and supply closets for centralized functionality." (NCIDQ IDPX Study Guide, Section 2: Building Systems) Explanation from Official Source:The NCIDQ defines the service core as the backbone of vertical and utility systems, optimizing space and circulation in multi-level designs.

Objectives:

* Understand building system integration (IDPX Objective 2.6).

NEW QUESTION # 105

A restaurant is designated as which occupancy classification?

- A. restaurant: group R
- B. public: group P-3
- C. assembly: group A-2
- D. business: group B

Answer: C

Explanation:

Per IBC Section 303, a restaurant is classified as Assembly Group A-2, designated for spaces where people gather to eat and drink, with an occupant load typically over 50. Public P-3 (A) isn't an IBC classification.

Business Group B (B) applies to offices, not dining. Residential Group R (C) is for living spaces, not commercial dining. A-2 (D) fits restaurants due to their assembly use and safety requirements (e.g., egress, fire protection).

Verified Answer from Official Source:D - assembly: group A-2

"Restaurants are classified as Group A-2 (Assembly) under IBC for areas intended for food and drink consumption." (NCIDQ IDPX Study Guide, Section 1: Codes and Standards) Explanation from Official Source:The NCIDQ references IBC, ensuring designers apply A-2 for restaurants to meet life safety and occupancy standards.

Objectives:

* Determine occupancy classifications (IDPX Objective 1.2).

NEW QUESTION # 106

.....

The result of your exam is directly related with the IDPX learning materials you choose. So our company is of particular concern to your exam review. Getting the IDPX certificate of the exam is just a start. Our IDPX practice materials may bring far-reaching influence for you. Any demands about this kind of exam of you can be satisfied by our IDPX training quiz. So our IDPX practice materials are of positive interest to your future. Such a small investment but a huge success, why are you still hesitating?
