ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q199-Q204):

NEW QUESTION # 199

Which is a reason for
and physical security regulations meeting a mixed resistance?
Available Choices (select all choices that are correct)

- A. Regulations contain only informative elements.
- **B. There are a limited number of enforced cybersecurity and physical security regulations.**
- C. Cybersecurity risks can best be managed individually and in isolation.
- D. Regulations are voluntary documents.

Answer: B

Explanation:

Cybersecurity and physical security regulations are intended to provide guidance and requirements for protecting industrial control systems from various threats and risks. However, these regulations may face mixed resistance from different stakeholders for various reasons. One of the reasons is that there are a limited number of enforced cybersecurity and physical security regulations, especially at the international level. This means that some regions or countries may have more stringent or comprehensive regulations than others, creating inconsistencies and challenges for cross-border cooperation and compliance. Moreover, some regulations may be outdated or not aligned with the current best practices and standards, such as ISA/IEC

62443, which may limit their effectiveness and applicability. Therefore, some organizations may prefer to follow voluntary standards or frameworks, such as ISA/IEC 62443, rather than mandatory regulations, as they may offer more flexibility and adaptability to the specific needs and contexts of each industrial control system. NEW QUESTION # 200

Which of the following is the BEST reason for periodic audits?

Available Choices (select all choices that are correct)

- A. To meet regulations
- B. To adhere to a published or approved schedule
- C. To confirm audit procedures
- **D. To validate that security policies and procedures are performing**

Answer: D

NEW QUESTION # 201

Under User Access Control (SP Element 6), which of the following is included in USER 1 - Identification and Authentication?

- A. Mutual authentication
- B. Incident handling and response
- C. Backup restoration
- **D. Password protection**

Answer: D

Explanation:

SP Element 6 in ISA/IEC 62443-2-1 covers User Access Control. Within this, USER 1 - Identification and Authentication includes controls such as:

Unique user identification

Password and credential management

Authentication mechanisms

"USER 1 defines policies for individual user identification and password protection to enforce accountability and prevent unauthorized access."

- ISA/IEC 62443-2-1:2010, Clause 4.3.4 - SP Element 6

"Password protection" is a core component of this control, while other options (like incident handling or backup) fall under different SP elements.

NEW QUESTION # 202

What change was introduced in the second edition (2024) of ISA-62443-2-1 compared to the first edition (2010)?

- A. Removal of supply chain security considerations
- **B. Elimination of duplication of ISMS requirements**
- C. Introduction of a new PDCA cycle framework
- D. Focus only on individual system components rather than overall system

Answer: B

Explanation:

The 2024 Second Edition of ISA/IEC 62443-2-1 was restructured to eliminate redundancy with ISO/IEC 27001 and to focus on aspects unique to IACS environments.

From ISA/IEC 62443-2-1:2024 Preface:

"The second edition removes duplication with ISO/IEC 27001 and instead focuses on IACS-specific considerations that complement an organization's overall ISMS." It still aligns with the Plan-Do-Check-Act (PDCA) model but no new framework was introduced - rather, clarity and applicability were improved.

Incorrect Options:

- A). The PDCA model was retained, not newly introduced.
- C). Supply chain security was actually emphasized, not removed.
- D). The focus remains on system-wide security management, not just components.

NEW QUESTION # 203

What is one reason why IACS systems are highly vulnerable to attack?

- **A. They often have unpatched software.**
- B. They are isolated from all networks.
- C. They use the latest software updates regularly.
- D. They do not require patches.

Answer: A

Explanation:

Many Industrial Automation and Control Systems (IACS) are vulnerable because they run legacy software and are rarely patched, due to operational constraints like uptime requirements and fear of system disruption.

"IACS systems are often vulnerable due to the presence of legacy components, limited patching, and prolonged system lifespans without updates."

- ISA/IEC 62443-2-1:2010, Clause 4.4.3 - Patch Management

They are not always isolated (due to remote access, IIoT, etc.), and do not regularly implement the latest updates like IT systems.
