

Latest ISTQB ISTQB-CTAL-TA Test Answers - ISTQB-CTAL-TA Pass4sure

The image is a graphic titled "ISTQB Test Analyst Exam Summary:" with a background of a person working on a laptop. It contains a table with exam details and links to sample questions and a practice exam.

Vendor	ISTQB
Exam Code	CTAL-TA
Full Exam Name	ISTQB Certified Tester Advanced Level - Test Analyst
Number of Questions	40
Sample Questions	ISTQB CTAL-TA Exam Sample Questions and Answers
Practice Exam	ISTQB CTAL-TA Practice Test
Passing Score	52/80
Time Limit	120 Minutes
Exam Fee	USD \$250

Easy and Guaranteed Success with ProcessExam.com

We always strictly claim for our ISTQB-CTAL-TA study materials must be the latest version, to keep our study materials up to date, we constantly review and revise them to be at par with the latest ISTQB syllabus for ISTQB-CTAL-TA exam. This feature has been enjoyed by over 80,000 takes whose choose our study materials. The one who choose our study materials that consider our website as the top preparation material seller for ISTQB-CTAL-TA Study Materials, and inevitable to carry all candidates the finest knowledge on exam syllabus contents. Not only that, we will provide you a free update service within one year from the date of purchase, in order to keep up the changes in the exam so that every candidates who purchase our ISTQB-CTAL-TA study materials can pass the exam one time.

ValidTorrent helped many people taking IT certification exam who thought well of our exam dumps. 100% guarantee to pass IT certification test. It is the fact which is proved by many more candidates. If you are tired of preparing ISTQB ISTQB-CTAL-TA Exam, you can choose ValidTorrent ISTQB ISTQB-CTAL-TA certification training materials. Because of its high efficiency, you can achieve remarkable results.

Well-Prepared Latest ISTQB-CTAL-TA Test Answers - Effective ISTQB-CTAL-TA Exam Tool Guarantee Purchasing Safety

The ISTQB ISTQB-CTAL-TA exam questions are designed and verified by experienced and qualified ISTQB ISTQB-CTAL-TA exam trainers. They work together and share their expertise to maintain the top standard of ISTQB ISTQB-CTAL-TA Exam Practice test. So you can get trust on ISTQB ISTQB-CTAL-TA exam questions and start preparing today.

ISTQB CTAL-TA exam covers a wide range of topics, including test management, test analysis, test design, and test implementation. ISTQB-CTAL-TA exam is designed to assess candidates' ability to analyze and evaluate complex testing situations and to apply advanced testing techniques to solve problems. ISTQB-CTAL-TA Exam also evaluates candidates' ability to communicate effectively with stakeholders and to work collaboratively with other team members.

ISTQB (ISTQB CTAL-TA) ISTQB Certified Tester Advanced Level - Test Analyst (Syllabus 2012) Sample Questions (Q11-Q16):

NEW QUESTION # 11

Which task is considered the responsibility of the Test Analyst and ONLY performed as part of the test implementation activities?
SELECT ONE OPTION

- A. Identifying test data to support test conditions and test cases
- B. Capturing bi-directional traceability between the test basis, test conditions, and test cases
- C. Designing the test environment and identifying any required infrastructure, including tools

- D. Creating a test execution schedule, including resource allocation

Answer: A

Explanation:

Comprehensive and Detailed in Depth Explanation:

- * During test implementation, the Test Analyst's primary task is to identify and prepare test data that supports the execution of test cases and conditions.
 - * B. Creating a test execution schedule is part of test planning, not implementation.
 - * C. Capturing bi-directional traceability typically occurs during test design and management activities, not exclusively during implementation.
 - * D. Designing the test environment is typically a Technical Test Analyst responsibility, as it involves infrastructure and tool setups.
- The correct answer is A (Identifying test data to support test conditions and test cases).

NEW QUESTION # 12

During testing of a mobile banking application, traceability matrices are defined and maintained between test cases and user stories. This task is supported by a test management tool. Testing is expected to report on the coverage level of the implemented and tested user stories. Which of the following test types is most likely being performed?

- A. Functional correctness testing
- **B. Functional completeness testing**
- C. Interoperability testing
- D. Functional appropriateness testing

Answer: B

Explanation:

The test type that is most likely being performed is functional completeness testing. Functional completeness testing is a test type that verifies that all the specified functional requirements have been implemented and tested. This test type is supported by traceability matrices that show the relationship between test cases and user stories, and by reporting on the coverage level of the implemented and tested user stories. Verified References: [ISTQB Certified Tester Advanced Level Test Analyst CTAL-TA], Section 5.1.1, page 59.

NEW QUESTION # 13

Based on the classification tree shown below, using the pairwise testing technique how many test cases are required to test all pairs?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

Nine test cases are required to test all pairs using the pairwise testing technique based on the classification tree. Pairwise testing is a technique that tests all possible pairs of inputs for a given scenario using a mathematical algorithm to reduce the number of combinations. The inputs for this scenario are:

- * Power Unit: Petrol, Electric, Hybrid
- * Body Style: Saloon, Hatchback, SUV
- * Color: Red, Blue

The number of test cases is equal to the number of combinations generated by the algorithm that cover all pairs of inputs. Verified References: [ISTQB Certified Tester Advanced Level Test Analyst CTAL-TA], Section 3.5.2, page 42.

NEW QUESTION # 14

An airline provides self-service check-in kiosks for its passengers. The user is asked to present the passport for reading, enter the flight booking number, the seats requested, the number of bags to check-in, and acknowledge that security requirements have been met. The machine then prints the boarding passes.

The following use case has been created:

USE CASE: SELF-SERVICE CHECK-IN

* Use case ID:UC23

* Purpose:Passenger checks-in using the self-service kiosk application.

* Actors:Passenger, System

* Pre-conditions:User selects to start self-service check-in at the kiosk and the system asks the user to place the passport on the reader.

STEP	ACTOR Action	STEP	SYSTEM action
1	Passenger places Passport on reader	2	System verifies the passport. If passport read successfully, asks Passenger to enter Flight booking number
		E1	Passport not recognized. Try again.
		E2	Three failed passport reading attempts. Passenger referred to check-in desk.
3	Passenger retrieves passport and enters Flight booking number	4	System verifies flight booking number, retrieves and displays seating plan
		E3	Flight booking number not recognized. Passenger prompted to try again.
5	Passenger selects seats	6	System verifies seat requests and displays checked bags screen
		E4	Seat requests invalid. Passenger prompted to try again.
7	Passenger enters number of checked bags	8	System verifies checked bag entries and displays security screen
		E5	Check-in bags number invalid. Passenger prompted to try again.
9	Passenger confirms security requirements met	10	System prints boarding passes
		E6	Security requirements not acknowledged. Passenger prompted to read and confirm.
		E7	Unable to print boarding passes. Passenger referred to check-in desk.
11	Passenger clicks Finish and collects boarding passes		↓

You are to apply the Use Case test technique, where the following coverage rules have been defined in the test plan:

* One test case should be designed for the basic behavior.
* One test case should be designed for each alternate and error-handling behavior.
Applying these rules to the Self-Service Check-In Use Case, how many test cases should be designed?
SELECT ONE OPTION:

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The use case has one basic behavior (happy path) where all steps are completed without any errors.

In addition, there are 7 error-handling cases (E1 to E7) that each require a separate test case to verify that the system correctly handles each error condition.

Therefore, the total number of test cases required is:

* 1 basic behavior test case

* 7 error-handling test cases

$1+7=8$

Hence, the correct answer is B (8).

NEW QUESTION # 15

A software component for a game application calculates a player's trophy level based on two input parameter values: Points Earned and Level of Difficulty. A total score is calculated by the component as:

Total Score = Points Earned $\times$ Level of Difficulty

The trophy levels are:

* Blue- total score equal to or less than 40

* Silver- total score > 40

* Gold- total score > 70

* Diamond- total score > 80

* Platinum- total score > 90

The component then outputs the correct trophy level.

Applying the Equivalence Partition test design technique to this component, what percentage of output partitions have been exercised by the following suite of test cases?

* Player 1 - Points earned 25, level of difficulty 2

* Player 2 - Points earned 20, level of difficulty 3

* Player 3 - Points earned 30, level of difficulty 1

SELECT ONE OPTION:

- A. 10%
- B. 40%
- C. 60%

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation:

To determine the answer, we first calculate the total score for each player:

* Player 1: $25 \times 2 = 50$ (Silver)

* Player 2: $20 \times 3 = 60$ (Silver)

* Player 3: $30 \times 1 = 30$ (Blue)

The output equivalence partitions based on the trophy levels are:

* Blue: Total score ≤ 40

* Silver: Total score > 40 and ≤ 70

* Gold: Total score > 70 and ≤ 80

* Diamond: Total score > 80 and ≤ 90

* Platinum: Total score > 90

From the given test cases, the following partitions have been exercised:

* Blue (Player 3)

* Silver (Player 1 and Player 2)

Out of the 5 possible output partitions (Blue, Silver, Gold, Diamond, Platinum), only 2 partitions (Blue and Silver) have been exercised. Therefore, the percentage of partitions covered is:

A number and a percentage sign AI-generated content may be incorrect.

Hence, the correct answer is B (40%).

NEW QUESTION # 16

.....

Elaborately designed and developed ISTQB-CTAL-TA test guide as well as good learning support services are the key to assisting our customers to realize their dreams. Our ISTQB-CTAL-TA study braindumps have a variety of self-learning and self-assessment functions to detect learners' study outcomes, and the statistical reporting function of our ISTQB-CTAL-TA test guide is designed for students to figure out their weaknesses and tackle the causes, thus seeking out specific methods dealing with them. Most of them give us feedback that they have learned a lot from our ISTQB-CTAL-TA Exam Guide and think it has a lifelong benefit. They have more competitiveness among fellow workers and are easier to be appreciated by their boss. In fact, the users of our ISTQB-CTAL-TA exam have won more than that, but a perpetual wealth of life.
